DOCTORATE OF PHILOSHPHY

COMPUTER SCIENCE AND ENGINEERING

Department of Computer Science and Engineering Faculty of Engineering and Technology Chaudhary Devi Lal University Sirsa (Haryana) 2022

Table of Contents

- 1. About the Department
- 2. Learning Outcomes based Curriculum Framework
 - 2.1 Objectives of the programme
 - 2.2 Programme Outcomes (POs)
 - 2.3 Programme Specific Outcomes (PSOs)
 - 3. Programme Structure

1. About the Department

The institute, apart from establishing a robust teaching environment, is keen to facilitate and support cutting edge research in a variety of areas. This aspect will enable the students to acquaint themselves with the latest developments in their respective areas of study and to pursue their own research interests. The institute offers PhD programme in a wide range of areas in Computer Science & Engineering. The broad objective of the PhD programme is not only to keep pace with the expanding frontiers of knowledge but also to provide research training relevant to the present social and economic objectives of the country.

The academic programme leading to PhD degree is broad based and involves a minimum course credit requirement, comprehensive examination and synopsis seminar and thesis submission. The institute also encourages research in interdisciplinary areas through a system of joint supervision and interdepartmental group activities. The presence of highly motivated research oriented faculty members provides excellent opportunities for such programmes. The institute undertakes sponsored research and development projects from industrial and other organizations in public as well as private sector.

Further, every Ph.D. Scholar shall have to earn 14/16 credits in total including Core Courses credits, discipline elective courses Credits and MOOC or Research and Publication Ethics. The Ph.D. CSE programme is dedicated to conducting and reporting on a research problem culminating in a thesis. Further, every Ph.D. Scholar shall have to earn 14/16 credits in total – 08 Core Courses credits, 04 Discipline Specific Elective Courses Credits and 02/04 Credits from Research and Publication Ethics or MOOC.

2. Learning Outcomes based Curriculum Framework

The CBCS evolved into learning outcomes based curriculum framework and provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill-based courses. The courses can be evaluated following the grading system, which is considered to be better than the conventional marks system. Grading system provides uniformity in the evaluation and computation of the Cumulative Grade Point Average (CGPA) based on student's performance in examinations which enables the student to move across institutions of higher learning. The uniformity in evaluation system also enables the potential employers in assessing the performance of the candidates.

2.1 **Objectives of the Programme**

After completion of their programme, the **research scholars** are expected to:

- PEO1: extending the limits of what is currently known through innovative and highquality work;
- PEO2: the capacity to devise, design and conduct research that has real academic weight and shows integrity;
- PEO3: systematic understanding of a subject and mastery of the skills and methods associated with this subject;
- PEO4: the capacity for critical analysis, assessment and synthesis of new and complex ideas;
- PEO5: satisfying standards associated with national and international peer-reviewed publications.

2.2 Programme Outcomes (POs)

The PhD programme of Computer Science and Engineering prepares students to attain the educational objectives by ensuring that students demonstrate achievement of the following student outcomes:

PO1	Advanced Knowledge: A in-depth understanding of a substantial body of knowledge that is at the forefront of professional practice. Scholars in the field of Computer Science and Engineering to acquire positions at top-tier research institutions.
PO2	Research: The ability to conceptualize, design, and implement research for the generation of new knowledge, applications, adjustment of research methodologies in the light of unforeseen problems
PO3	Area of Research: the ability to make acceptable judgments on complex issues in specialized fields; and the ability to produce original research to merit publication.
PO4	Application: The aptitude to undertake basic and/or applied research at an advanced level; and contribute to the development of academic or professional skills, techniques, tools, practices, ideas, theories, approaches, and/or materials.
PO5	Methods: An understanding of methods of enquiry or creative activity, or both, in their primary area of study that enables the student to evaluate different approaches for problem solving using well established techniques; devise and sustain arguments; and comment upon aspects of current research.
PO6	Professionalism: The qualities and transferable skills necessary for employment requiring the exercise of personal responsibility and largely autonomous initiative in complex situations;
PO7	Knowledge: the ethical behaviour consistent with academic integrity and the use of appropriate guidelines for responsible conduct of research by applying knowledge to particular contexts.
PO8	Intellectual Abilities: Demonstrate skills in oral and written communication sufficient to publish and present work of quality which satisfies peer review and to prepare grant proposals.
PO9	Critical Research Thinking: Critically apply theories, methodologies and knowledge to address fundamental questions in their primary area of study.
PO10	Ethics: Apply ethical principles and strictly committed to professional ethics and responsibilities in their field and in academia.
PO11	Self-Managerial Skills: Apply self-reflective and self-critical approach based on research and to act autonomously in the planning and implementation of research.
PO12	Societal Impact: Work collaboratively to develop and exchange research knowledge so as to benefit and influence the society

2.3 Programme Specific Outcomes (PSOs)

The fresh **research scholars** of the Ph.D. programme will have the following discipline-specific graduate attributes:

PSO1	demonstrate proficiency in a specialized area of Computer Science and
	Engineering;
PSO2	ability to apply principles of computer engineering for the entire life cycle of
	the project ranging from initial design to the closure of the project;
PSO3	ability to identify and analyze various applications in design and functions of
	various applications.
PSO4	research and Development: Cultivate the field of computing and its latest
	trends, to pursue teaching, research & development activities and to work
	effectively in a team.
PSO5	develop and evaluate effective solutions for real-life and research problems.

3. Programme Structure

Course work of Doctor of Philosophy programme spans over one semester and comprise of 14/16 credits weightage consisting of Core Courses (CC) and Discipline Specific Elective Courses (DSC).

Table 1: Pre-Ph.D. Course Credit Scheme

Instructions to paper setter for Final Term Examination: The Final Term examination shall cover the whole content of the course. The total number of questions shall be nine. Question number one will be compulsory and will be consisting of short/objective-type questions from the complete syllabus. In addition to the compulsory first question, there shall be four units in the question paper each consisting of two questions. The student will attempt one question from each unit in addition to the compulsory question. All questions will carry equal marks.

Course Objectives: The objective of this course is to get the students familiar with different aspects of research methodology, namely, research design, collection and analysis of data, and interpretation of results.

Course Outcomes	At the end of this course, the student will be able to :
CO1	define: objectives, hypothesis, interpretation, data analysis, data collection, research design and method interpretation data analysis sampling
CO2	describe: objectives, hypothesis, interpretation, data analysis, data collection, research design and method, interpretation, data analysis, sampling.
CO3	illustrate: measurement, data collection, processing, sampling, analysis and its strategies, reports.
CO4	categorize: research, sampling methods, data collection techniques, reports ,and data processing strategies. perform: data analysis.
CO5	compare: sampling methods, data collection techniques, reports and data processing strategies.
CO6	create: thesis/reports, design research tool, interpret(derive) results.

Unit-1

Research an Introduction: Meaning, Characteristics, Classification, Importance.

Research Methods and Techniques: Classification of Research Methods, Advantages and Limitations, Steps Involved.

Research Tools: Library, Internet and Simulation.

11

Reviewing the literature: Place of the literature review in research, Bringing clarity and focus to research problem, Improving research methodology, Broadening knowledge base in research area, Enabling contextual findings, Review of the literature, searching the existing literature, reviewing the selected literature, Developing a theoretical framework, Developing a conceptual framework, Writing about the literature reviewed.

Unit-II

Formulation of Research Problem: Formulation of Research Problem, Considerations in selecting a research problem, Steps in formulation of a research problem, Delimiting problems, Sources of Research Problem, Criteria of a good Research Problem, Formulation and Stating the Problem, Common Errors. Hypothesis: Meaning, Importance, Types, Sources, Characteristics, Testing.

Research Design: Meaning, Characteristics of a Good Research Design, Components of a Research Design, and Types of Research Design.

Unit-III

Census and Sample Investigation: Meaning of Census and Sampling Investigation, Objective of Sampling, Advantages of Sampling and Census Method, Types of Sampling Techniques, Sampling Errors.

Data Collection: Primary and Secondary Data, Methods of Primary Data Collection, Sources of Secondary Data, Precautions in the use of Secondary Data.

Processing of Data: Editing, Coding, Classification.

Unit-IV

Analysis and Statistical Techniques: Meaning of Analysis, Primary Data Analysis, Secondary Data Analysis, Characteristics of Data Analysis and Statistical Methods in Analysis.

Interpretation of Data: Meaning and Need, Pre-requisites of Interpretation, Sources of Errors, Conclusion and Generalization,

Report Writing: Research Report, Types of Reports, Steps in Report Writing, Format of Research Report, Style and Typing of Research Report, Problems in Preparing Research Report.

Unit-I

Data Base System concepts and Architecture: Data Models, Schemas and Instances, DBMS architecture and Data Independence, Data Base languages & Interfaces, DBMS functions and component modules. Relational Data Model: Relational Model concepts, Integrity constraints over relations, Relational Algebra, Basic operations, Relational Data Base Design, Functional dependencies, Decomposition, Desirable properties of decomposition, normal forms based on primary keys (I NF, 2 NF, 3 NF and BCNF).

Unit-II

CPU organization: Processor organization, Machine Instructions, Instruction cycle, Instruction Format and addressing mode. Microprogramming concepts and micro program sequencer.

I/O Organization: I/O interface, interrupt structure, transfer of information between CPU/Memory and I/O devices, and IOPs, Memory Organization.

Parallel Architectures: Introduction, Classification, Parallel Techniques, Code Scheduling, Interconnection networks, VLIW Superscalar.

Unit-Ill

Issues, opportunities and constraints in applications of modern information and communication technologies in following domains of public life: commerce (e-commerce), banking (e-banking), teaching-learning (e-learning), Public governance (c-governance) and tourism.

Unit-IV

Software Quality, Software Quality Factors, Software Quality Metrics, Relationship between quality factors and quality metrics, Software standards, Software Reviews, Formal Technical Reviews, Software Quality Assurance, Clean Room Software Engineering, SEI-CMM. Standards of Software Quality, Quality Assurance Standard, Quality Review

Unit -1

Introduction: Concept of simulation, steps in simulation experiment, Benefits of simulation and its pitfalls, system modeling, principal used in modeling, Generation of random numbers, Generation of non-uniformly distributed random numbers.

Illustrative examples: Inventory problem. Chemical Reactor, Servo System, Water Reservoir System, Hypothetical Computer.

Unit-II

Simulation of discrete system: Fixed time-step vs. Event-to-Event Model, Monte Carlo computation.

Continuous system simulation: Continuous System models, Differential Equations, Analog Computers, Hybrid Computers, Digital-Analog Simulators.

Queuing Systems: Congestion in systems, Arrival Patterns, Poisson Arrival Patterns, Exponential Distribution, Coefficient of Variation, Erlang Distribution, Service Times, Normal Distribution, Basic concept of queuing theory, Simulation of single server, two servers.

Unit-III

Simulation of PERT Network: Network model of a project, Analysis of an Activity Network, Critical Path Computation, Uncertainties in Activity Durations, Simulation of an Activity Network, Computer Program for Simulation, Resource allocation and Cost Consideration.

Simulation of Inventory Control And Forecasting: Elements of inventory theory, inventory models, Forecasting and aggression analysis.

Design And Evaluation of Simulation Experiments: Length of Simulation Runs, Variance Reduction Techniques and validation.

Unit-IV

Simulation Languages: Continuous and discrete simulation languages, Block Structured continuous simulation languages, Expression based languages, Discrete system simulation languages, GPSS SIMCRIPT SIMULA, Factors in selection of discrete system simulation languages.

Unit-I

Fundamentals: Computational model, Evolution of computer architecture, process, program thread, concurrent and parallel execution, types and levels of parallelism, classifications of parallel architectures, Relationships between languages and parallel architectures.

Unit-II

Instruction-Level-Parallel Processors: Evolution and overview, Dependencies between instructions, Instruction Scheduling, Preserving Sequential Consistency, Speed-up Potential of ILP Processing.

Pipelined Processors: Basic concepts, Principles of Pipelined instruction processing, synchronous & asynchronous pipelining. Linear Pipeline-clocking and timing control, speedup efficiency & throughput. Nonlinear pipeline, reservation table, latency analysis, collision free scheduling, internal data forwarding.

Unit-III

Superscalar pipeline Design- Structure data dependencies pipeline stalling, in order issue, out of order issue, VLIW architecture. Branch handling delayed handling, branch processing multi way branching, guarded execution, code scheduling basis, block scheduling, loop scheduling, and global scheduling.

Memory Hierarchy Technology: Inclusion, coherence and locality, virtual memory models, TLB, paging and segmentation, memory replacement policies, cache addressing models, cache performance issues, interleaved memory organization.

Unit-IV

MIMD Architectures: Architectural concepts, Problems of scalable computers, Main design issues of scalable MIMD computers.

Distributed Memory MIMD Architectures: Introduction, Direct Connection networks, Shared Memory MIMD Architectures, Dynamic interconnection networks-shared path, switching networks, crossbar &

multistage networks, Cache coherence problem, Hardware based cache coherence protocol-Snoopy cache protocol directory scheme, scalable coherent interface, and hierarchical cache coherence protocol. UMA, NUMA, CC-NUMA and COMA multiprocessors.

Instructions to paper setter for Final Term Examination: The Final Term examination shall cover the whole content of the course. The total number of questions shall be nine. Question number one will be compulsory and will be consisting of short/objective-type questions from the complete syllabus. In addition to the compulsory first question, there shall be four units in the question paper each consisting of two questions. The student will attempt one question from each unit in addition to the compulsory question. All questions will carry equal marks.

Course Objectives: The objective of this course is to get the students familiar with Concept of Programming Languages, Structured Data Types, Sequence Control and Storage Management.

Course Outcomes At the end of this course, the student will be able to :														
CO1	defir	ne: Ar	n abilit	y to j	prograr	n in c	lifferen	t langu	age pa	radigm	s and ev	valuate		
	their	relati	ve bene	efits.										
CO2	desc	ribe:	An un	dersta	nding	of the	e key o	concept	s in t	he imp	lementat	ion of		
	com	common features of programming languages. Skills gained.												
CO3	illus impl	illustrate: Investigate semantic issues in programming languages by studying implementations in an interpreter.												
CO4	cates	categorize: Define the semantics of a programming language using a												
	defir	definitional interpreter. Competency developed												
CO5	com	compare: Solve problems using a range of programming paradigms and assess												
	the e	the effectiveness of each paradigm for a particular problem.

Unit-I

Introduction: Brief history of Programming Language, Characteristics of programming language. Programming Language Processors: The structure and operation of a computer, Hardware and firmware computers, Translator and simulator computers, Syntax, semantics and virtual computers, hierarchies of computers, binding and binding time.

Elementary Data Types: Data object, variable and constants, data types, specification of elementary data types, declarations, type checking and type conversion, assignment and initialization, numeric data types, enumerations, Boolean, characters.

Unit-II

Structured Data Types: Structured data object and data types, specification of data structure types, implementation of data structure types, declarations and type checking for data structures, vector and arrays, record, character strings, variable sized data structures, pointers and programmer-constructed data objects, sets, file and input/output.

Subprogram And Programmer-Defined Data Types: Evolution of the data type concept, Abstraction, encapsulation, and information hiding, subprogram, type definitions, abstract data types.

Unit-III

Sequence Control: Implicit and explicit sequence control, sequence control within expression, sequence control between statements, subprogram sequence control, recursive subprogram, exceptions and exception handlers, Co-routines, scheduled subprograms, tasks and concurrent execution, data structures and sequence control.

Data Control: names and referencing environments, static and dynamic scope, block structure, local data and local referencing environments, shared data, task and shared data.

Unit-IV

Storage Management: Major Runtime elements requiring storage, programmer and system controlled storage management, storage management phases, static storage management, stack based storage management, heap storage management

Syntax And Translation: General syntactic criteria, syntactic elements of language, stages in translation, formal definition of syntax.

Operating and Programming Environment: Batch processing environment, interactive environments, embedded system environments, programming environments.

Theoretical Models: Problem in syntax and translation, problem in semantics.

Unit-I

Introduction, Evolution of Data Warehousing, Principles of Data Warehousing, Types of Data and their uses, conceptual Data Architecture, Design Techniques, introduction to the Logical Architecture, Creating the Data Asset, Business Data Warehouse Design, Populating the Data Warehouse.

Unit-II

Implementation of Warehouse, Obstacles to Implementation, Planning your implementation, justifying the warehouse, Organizational Implications of Data Warehousing, The Data Warehouse in your Organization, Data Warehouse Management, Locking to the Future.

Data Mining: Motivation, Importance, data mining, kind of data, Functionalities, interesting patterns, classification of data mining system, Major issues.

Unit-III

Data warehouse and OLAP Technology for data mining: data warehouse, operational data base systems and data warehouse, Architecture, Implementation, development of data cube technology, data warehousing to data mining, Data warehouse usage.

Data Preparation: Preprocess, Data cleaning, Data Integration and transformation, Data reduction.

Unit-IV

Concept Description: Characterization and Comparison, Data Generalization and summarization-based characterization, Analytical characterization, analysis of attribute relevance, mining class comparisons, and mining descriptive statistical measures in large databases.

Mining Association Rules in Large Database, Mining single-dimensional Boolean association rules from transactional databases, mining multilevel association rules from transaction databases, Mining multidimensional association rules from relational databases and data warehouses, From association mining to correlation analysis, constraint-based association. Classification and prediction, issues, classification by decision induction, Bayesian classification, classification by back propagation, classification based on concepts crom association rule mining other classification methods.

Unit-I

Graphical User Interface and the Operating System: Windowing Technology, Graphical User Interface, relationship between Operating System and the Windows, Components of GUI, requirement of a Windows based GUI

Security and Protection: Security Threats, Attacks on Security, Security Violation through Parameters, Computer Worms, Computer Viruses, Security Design Principles, Authentication, Protection Mechanism, Encryption, Security in Distributed Environment.

Unit-II

Processes: Process Model, Implementation of Processes, Threads, Inter-process Communication, Race Condition, Critical Section, Mutual Exclusion with Busy waiting, Sleep and Wakeup, Semaphores, Monitors, Message Passing. Classical IPC Problems, Process Scheduling, Round Robin, Priority, Multiple Queues, Shortest Job First, Guaranteed, Lottery, Real Time and Two-Level Scheduling.

Disk Performance Optimization: Moving Head Disk Storage, Disk Scheduling, Seek Optimization, Rotational Optimization, Disk Caching.

Unit-III

Distributed and Parallel Processing: Parallel Processing, Distributed Processing, Difference between Distributed and Parallel Processing, Advantages of Parallel Processing, Writing Programs for Parallel Processing, Machine Architecture supporting Parallel Processing, Operating System for Parallel Processors, Issues in Operating System in Parallel Processing.

Unit-IV

Distributed Operating Systems: Architecture of Distributed Systems, Networking, Interprocess Communication Protocols, Distributed Computation Paradigm, Network Operating System, Design issues in Distributed Operating System, Theoretical issues in Distributed Systems, Distributed Control Algorithms, Distributed Mutual Exclusion, Distributed Deadlock Handling, Distributed Scheduling Algorithms, Recovery and Fault Tolerance. Distributed File System, Distributed system Security.

Unit-I

Extended E-R Model: Subclasses, super classes and Inheritance, Specialization and Generalization, Constraints and Characteristics of Specialization and generalization.

Object-oriented Data Model : Object Identity, Object Structure, and Type constructors, Encapsulation of Operations, Methods and Persistence, Type Hierarchies and Inheritance, Complex Objects, Polymorphism, Multiple Inheritance, Versions and Configurations,

Object Relational Databases: Basic Concepts of Object-Relational systems, Object-Relational features of Oracle, An overview of SQL3, Object-Relational support in SOL3, Relational Data Model.

Unit-II

Further Normalization: Higher Normal Forms, Multivalued Dependencies and 4th normal Form, Join Dependencies and 5th Normal Form, Domain-key Normal Form.

Database System Architectures: Centralized systems, Client-Server Systems, Server System Architecture, Parallel Systems, and Distributed Systems.

Unit-III

Distributed Database and Client-Server Architecture: Distributed Database concepts. Data Fragmentation, Replication and Allocation Techniques for Distributed Database Design, Type of Distributed Database System, Overview of Concurrency Control and recovery in Distributed Databases. An Overview of Client-Server Architectures, Distributed Databases in Oracle.

Unit-IV

Data warehousing Concepts: Architecture, Data flows, Tools & Technologies, Data Marts, Data Mining & Online Analytical Processing

Web Interfaces to Databases: Web Fundamentals, Databases and the Web, Web Servers and Sessions, Providing access to Database on WWW. The Oracle Web server. Performance Tuning, Performance Benchmarks.

Enhance Data models for Advanced Applications: An Overview of active Databases. Spatial Databases, Deductive Databases, Multimedia Databases, Mobile Computing & Mobile Databases.

Instructions to paper setter for Final-Term Examination: The Final-Term examination shall cover the whole content of the course. The total number of questions shall be nine. Question number one will be compulsory and will be consisting of short/objective-type questions from the complete syllabus. In addition to the compulsory first question, there shall be four units in the question paper each consisting of two questions. The student will attempt one question from each unit in addition to the compulsory question. All questions will carry equal marks.

Course Objectives: The objective of this course is to make the students familiar with the topics of networking, data communication, modes of transmission, communication media, routing, error control and congestion control.

Course	At the end of	this course, the s	student will be ab	ole to:									
Outcomes													
CO1	define the ter including typ communication	rms and concept es of network to on, transmission	s of data commu opologies, referent modes and media	nication and concerned models, pro	omputer networking ptocols used in data multiplexing.								
CO.2	 understand and describe various concepts of data communication and computer networking including network topologies, reference models, protocols used in data communication, data transmission modes and transmission media, switching and multiplexing. apply the techniques learnt here in the design and evaluation of computer and 												
CO3	apply the tec communication network topo	hniques learnt h on networks and logy/switching/p	here in the design decide which control of the decide which control of the decide which control of the decide of t	n and evaluation mpeting commu gy will suit a par	on of computer and inication media, and rticular situation.								
CO4	 network topology/switching/protocol/technology will suit a particular situation. differentiate various types of: computer and data communication networks, network topologies, switching and multiplexing mechanisms, error control mechanisms, routing protocols, transmission modes, transmission media, congestion control techniques. 												
CO5	 congestion control techniques. compare, evaluate and choose between candidate: network topologies, transmission media, switching and multiplexing techniques, protocols and different layers, error control mechanisms, congestion control techniques.

Unit-I

Basic concepts of analog and digital signals, data transmission concepts, Analog and digital data transmission, Analog to digital conversion, Digital to Analog conversion, transmission media, Shannon Capacity, Network Topologies, Switching, Multiplexing, Protocols and Standards, OSI (model, Transmission Media, Modems.

Unit-II

Data Link Layer: Data Link Layer Design issues, Error - detection and correction, Data Link Protocols, Sliding Windows Protocols, Protocols specification and Verification, Example Data Link Protocols, Medium Access Sublayer (Channel Allocation Problem, Multiple Access Protocols).

Unit-III

Network Layer: Network Layer Design Issues, Routing Algorithms, Congestion Control Algorithms, Network Layer in ATM Networks. Transport Layer - Transport Service, Elements of Transport Protocols, Performance Issues.

Unit-IV

Application Layer: Network Security, Domain Name System, SNMP, Electronic Mail, Multimedia. Mobile Databases.

Satellite Systems: History, Applications, Basics, Routing, Localization, Handover Broadcast Systems: Overview, Cyclic repetition of Data, Digital audio broadcasting, Digital video broadcasting, convergence of broadcasting and mobile communication.

Unit-I

Introduction: Life cycle models, Requirement Analysis and specification, Formal requirements specification. Fundamental issues in software design, goodness of design, cohesions, coupling. Function-oriented design.

Unit-II

Structured analysis and design, overview of object -oriented concepts. Unified Modeling Language, unified design process.

Unit-III

User interface design, coding standards and guidelines, code walkthrough and reviews. Unit testing, black box and white box testing, integration and system testing. Software quality assurance and reliability modeling.

Unit-IV

SEI CMM, ISO 9001 and Six Sigma, clean room testing technique. Software maintenance issues and techniques. Software reuse. Client-Server software development, Personnel Software process, Soft Computing

Introduction: background and history, overview of AI applications areas.

The predicate calculus: syntax and semantic for propositional logic and FOPL, clausal form, inference rules, resolution and unification.

Knowledge representation: network representation, associative network & conceptual graphs, structured representation, frames & scripts.

Unit II

Search strategies: strategies for state space search, data-driven and goal driven search,

Search algorithms: uninformed search (depth-first, breadth-first, depth-first with iterative deepening) and informed search (hill climbing, best first, A* algorithm, mini-max etc.), computational complexity, properties of search algorithms, admissibility, monotonicity, optimality, dominance.

Unit III

Production system: types of production system-commutative and non-commutative production systems, decomposable and non-decomposable production systems, control of search in production systems.

Rule-based expert systems: architecture, development, managing uncertainty in expert systems, Bayesian probability theory, Stanford certainty factor algebra, nonmonotonic logic and reasoning with beliefs, Fuzzy logic, Dempster/Shaffer and other approaches to uncertainty.

Unit IV

Knowledge acquisition: types of learning, learning by automata, intelligent editors, learning by induction. Genetic algorithms: problem representation, encoding schemes, operators: selection, crossover, mutation, replacement etc.

Basics of Machine Learning: Introduction to artificial Intelligence and machine learning, types of machine learning and its comparisons, applications of machine learning, issues in machine learning.

Unit II

Preparing to Model: Introduction, machine learning activities, types of data in machine learning, exploring structure of data, data pre-processing (dimension reduction and feature subset selection), model selection.

Unit III

Supervised Learning: Introduction, classification (introduction, classification model, learning steps, common classification algorithm), regression (linear regression, multivariable regression, logistic regression).

Unit IV

Unsupervised Learning: Introduction and its applications, techniques in unsupervised learning (clustering, K-means).

Neural Network: Introduction, architecture of artificial neural network.

Machine Learning Review: Introduction, math behind machine learning (vector, scalars, matrices, statistics, probability), How Machine Learning works: Regression, Classification, Underfitting, overfitting, gradient descent, logistic regression, confusion matrix.

Unit II

Foundation of Deep Learning: neural network, activation function (linear, sigmoid, tanh, softmax), loss function for (notation, regression, classification, recontruction), hyperparameters (learning rate, regularization, momentum, sparsity).

Unit III

Fundamental of Deep Networks: common architectural principles, building block of deep network; Major architectures of Deep Network: unsupervised pretrained network, generative adversarial network, convolutional neural network, recurrent neural network, recursive neural network;

Unit IV

Building Deep Networks: columnar data and multilayer perceptron, images and CNN, time series sequences and RNN, modeling csv data with multilayer perceptron network, modeling handwritten images using CNN, modeling sequence data using RNN, application of deep learning in NLP.

Instructions to paper setter for Final-Term Examination: The Final-Term examination shall cover the whole content of the course. The total number of questions shall be nine. Question number one will be compulsory and will be consisting of short/objective-type questions from the complete syllabus. In addition to the compulsory first question, there shall be four units in the question paper each consisting of two questions. The student will attempt one question from each unit in addition to the compulsory question. All questions will carry equal marks.

Course Objectives: The objective of this course is to get the students familiar with the concepts and processes of Data Science including collection, filtering, processing, analysis and visualization.

Course Outcomes	At the end of this course, the student will be able to :
CO1	define: data science process, classification of data, big data, web data, sampling, data analysis techniques-correlation, regression, mean, mode, kurtosis, Bayesian inference etc., neural network, fuzzy logic, rule of mining, hadoop, hive, cloud database, and visualization.
CO2	understand and describe: graphical representation of data, storage and retrieval of data, evolution of analytic scalability, sampling distribution, data analysis techniques, Bayesian model and network, induction rule, neural network, fuzzy logic, data mining techniques, data analysis framework and visualization.
CO3	use: data science process, modern data analytic tools, statistical concepts, data analysis techniques, Bayesian network, induction rule, fuzzy logic, data mining techniques, hadoop file system, hive, S3, cloud database, inference and visualization.
CO4	categorize: analytic processes and tools, analysis, reporting, sampling and re- sampling, data analysis techniques, linear and non-linear time series, sequential, temporal and spatial mining, egonets systems and application.
CO5	choose: data science process, data storage, data analytic tools and processes, sampling method, data analysis technique, time series, mining techniques, visual data analysis framework and technique suitable in given situation.

Introduction to Data Science : data science process, exploratory data analysis, collection of data, graphical presentation of data, classification of data, storage and retrieval of data, big data, challenges of conventional systems, web data, evolution of analytic scalability, analytic processes and tools, analysis vs reporting, modern data analytic tools;

Statistical Concepts: sampling distributions, re-sampling, statistical inference, prediction error.

Unit II

Data Analysis: Correlation, regression, probability, Conditional probability, random variables, analysis using mean, median, mode, standard deviation, skewness, kurtosis, regression modeling, multivariate analysis, Bayesian modeling, inference and Bayesian networks, support vector and kernel methods; Analysis of Time Series: linear systems analysis, nonlinear dynamics.

Unit III

Data Mining Techniques: Rule induction: neural networks: learning and generalization, competitive learning, principal component analysis and neural networks;

Fuzzy Logic: extracting fuzzy models from data, fuzzy decision trees, stochastic search methods, neuro fuzzy modeling,

Association Rule Mining: clustering, outlier analysis, sequential pattern mining, temporal mining, spatial mining, web mining

Unit IV

Data Analysis Frameworks and Visualization: Map Reduce, Hadoop, Hive, sharding, NoSQLdatabases, cloud databases, S3, Hadoop Distributed File Systems, visualizations, visual data analysis techniques, interaction techniques, social network analysis, collective inferencing, Egonets systems and applications.

Introduction to Big Data and Hadoop, Types of digital data, introduction to Big Data, Vs of Big Data, Big Data Analytics, History of Hadoop, Apache Hadoop, analysing Data with Unix tools, Analysing Data with Hadoop, Hadoop Streaming, Hadoop Echo System, IBM Big Data Strategy, Big Data applications.

Unit II

HDFS (Hadoop Distributed File System), design of HDFS, HDFS concepts, command line interface, Hadoop file system interfaces, data flow, data ingest with flume and Scoop and Hadoop archives, Hadoop I/O: compression, serialization, Avro and file-based data structures.

Unit III

Map Reduce: Anatomy of a Map Reduce job run, failures, job scheduling, shuffle and sort, task execution, Map Reduce types and formats, Map Reduce features.

Unit IV

Hadoop Ecosystem, Introduction to Pig, execution modes of Pig, comparison of Pig with databases, grunt, Pig latin, user defined functions, data processing operators. Hive, Hive shell, Hive services, Hive metastore, comparison with traditional databases, HiveQL, tables, querying data and user defined functions.

Instructions to paper setter for Final-Term Examination: The Final-Term examination shall cover the whole content of the course. The total number of questions shall be nine. Question number one will be compulsory and will be consisting of short/objective-type questions from the complete syllabus. In addition to the compulsory first question, there shall be four units in the question paper each consisting of two questions. The student will attempt one question from each unit in addition to the compulsory question. All questions will carry equal marks.

Course Objectives: To study fundamental concepts in wireless network, various LAN standards, IP and IPV6 Layer, Transmission protocols and WAN standards.

Course Outcomes	At the end of this course, the student will be able to:
CO1	define: wireless LAN, architecture, mobile network layer, mobile transport layer
	and wireless wide area network.
CO2	describe: WLAN technologies, IEEE 802.11 types , IEEE 802.16, Bluetooth,
	IPV6, mobile ad-hoc network, TCP enhancements for wireless network, UTMS,
	3G-MSC, 3G-SGSN, 3G-GGSN, applications of 4G, features and challenges of
	5G.
CO3	illustrate: wireless LAN, system architecture, physical layer, Mac layer, Bluetooth
	architecture, mobile IP, mobile ad-hoc network, mobile transport layer, TCP
	improvements, wireless wide area network, HSDPA, features and challenges of
	4G, 5G.
CO4	analyze: WLAN technologies, 802.11b, 802.11a, IEEE 802.16, IPV6,
	Routing, TCP enhancements, TCP improvements, UMTS core network
	architecture, firewall, 3G, 4G and 5G networks.
CO5	compare: different Wireless LAN technologies, mobile network layer,
	mobile transport layer, Mobile IP, mobile ad-hoc networks, protocols, TCP
	improvements and wireless WAN types.

Unit I

Wireless LAN: Introduction-WLAN technologies: Infrared, UHF narrowband, spread spectrum - IEEE802.11: System architecture, protocol architecture, physical layer, MAC layer, 802.11b, 802.11a – Hiper LAN: WATM, BRAN, HiperLAN2 – Bluetooth: Architecture, Radio Layer, Baseband layer, Link manager Protocol, security - IEEE802.16-WIMAX: Physical layer, MAC, Spectrum allocation for WIMAX.

Unit II

Mobile Network Layer: Introduction - Mobile IP: IP packet delivery, Agent discovery, tunneling and encapsulation, IPV6- Network layer in the internet- Mobile IP session initiation protocol - mobile ad-hoc network: Routing, Destination Sequence distance vector, Dynamic source routing.

Unit III

Mobile Transport Layer :TCP enhancements for wireless protocols, Traditional TCP: Congestion control, fast retransmit/fast recovery, Implications of mobility - Classical TCP improvements: Indirect TCP, Snooping TCP, Mobile TCP, Time out freezing, Selective retransmission, Transaction oriented TCP, TCP over 3G wireless networks.

Unit IV

Wireless Wide Area Network: Overview of UTMS Terrestrial Radio access network-UMTS Core network Architecture: 3G-MSC, 3G-SGSN, 3G-GGSN, SMS-GMSC/SMS-IWMSC, Firewall, DNS/DHCP-High speed Downlink packet access (HSDPA)- LTE network architecture and protocol, features and challenges of 4G, Applications of 4G, Introduction to 5G vision,5G features and challenges.

Instructions to paper setter for Final-Term Examination: The Final-Term examination shall cover the whole content of the course. The total number of questions shall be nine. Question number one will be compulsory and will be consisting of short/objective-type questions from the complete syllabus. In addition to the compulsory first question, there shall be four units in the question paper each consisting of two questions. The student will attempt one question from each unit in addition to the compulsory question. All questions will carry equal marks.

Course Objectives: To study fundamental concepts in Network Security, security attack, cryptography, authentication, web security, system and email security.

Course Outcomes	At the end of this course, the student will be able to :
CO1	define: computer security, security standards, cipher model, encryption techniques,
	data encryption standards, public-key cryptography, security at transport layer,
	SSL/TSL attacks, wireless security and IEEE 802.11i.
CO2	explain: computer concepts related with the security, symmetric techniques, advanced
	encryption standard, RSA, concept of digital signature, security protocols, wireless
	security measures and email security.
CO3	illustrate: the different features related with computer security, encryption and
	symmetric techniques, data encryption standards, security at transport layer and
	wireless LAN security.
CO4	classify: the information about security, its architecture, types of attacks,
	security mechanism, encryption standards, protocols at transport layer and
	wireless LAN security.
CO5	evaluate: the security trends, security mechanisms, cipher model, RSA, Diffie-
	Hellman key exchange, transport layer security, SSL/TSL attacks, wireless
	security and IP security.

Computer Security Concepts – Introduction, security, security trends, components of information system, OSI security architecture, security attacks, goals for security, security mechanisms, security standards. Cipher model, cryptanalysis and brute-force attack, classical encryption techniques – symmetric techniques – substitution techniques, transposition techniques, rotor machines, steganography.

Unit II

Traditional block cipher, data encryption standard, encryption and decryption, advanced encryption standard, structure and expansion functions.

Public-key cryptography, principles, applications and requirements, RSA, Diffie-Hellman key exchange. Concept of digital signature.

Unit III

Security at Transport Layer, web security considerations, Transport Layer Security, TLS record protocol, change cipher spec protocol, alert protocol, handshake protocol, heart-beat protocol; SSL/TSL attacks; HTTPS; Secure shell; user authentication protocol, connection protocol.

Unit IV

Wireless Security, wireless security measures, mobile device security - threats and strategy.

Wireless LAN security, IEEE 802.11i - services, operation and phases.

Email security, S/MIME, PGP, overview of IP security.

UNIT I

Introduction, Essentials, Benefits and need for Cloud Computing, Business and IT Perspective, Cloud and Virtualization, Cloud Services Requirements, Cloud and Dynamic Infrastructure, Cloud Computing Characteristics Cloud Adoption. Cloud Characteristics, Measured Service, Cloud Models, Security in a Public Cloud Public versus Private Clouds, Principal Technologies, Cloud Strategy Cloud Design and Implementation using SOA, Conceptual Cloud Model, Cloud Service.

UNIT II

Cloud Solutions, Cloud Ecosystem, Cloud Business Process Management, Cloud Service Management, Cloud Stack, Computing on Demand (CoD), Cloud sourcing, Cloud Offerings, Information Storage, Retrieval, Archive and Protection, Cloud Analytics Testing under Cloud, Information Security, Cloud Governance, High Availability and Disaster Recovery, Charging Models, Usage Reporting, Billing and Metering.

UNIT III

Virtualization, Benefits, Server Virtualization, Virtualization for x 86 Architecture, Hypervisor Management Software, Logical Partitioning (LPAR), VIO Server, Virtual Infrastructure Requirements, Storage virtualization, Storage Area Networks, Network-Attached storage, Cloud Server Virtualization, Virtualized Data Centre.

UNIT IV

SOA Journey to Infrastructure, SOA and Cloud, SOA Defined, SOA and IaaS, SOA-based Cloud Infrastructure Steps, SOA Business and IT Services, OLTP Benchmark, Business Intelligence Benchmark, e-Business Benchmark, ISV Benchmarks, Cloud Performance Data Collection and Performance Monitoring Commands, Benchmark Tools.

UNIT I

Fundamentals of IoT: Introduction, Definitions & Characteristics of IoT, IoT Architectures, Physical & Logical Design of IoT, Enabling Technologies in IoT, History of IoT, About Things in IoT, The Identifiers in IoT, About the Internet in IoT, IoT frameworks, IoT and M2M.

UNIT II

Sensors Networks : Definition, Types of Sensors, Types of Actuators, Examples and Working, IoT Development Boards: Arduino IDE and Board Types, RaspberriPi Development Kit, RFID Principles and components, Wireless Sensor Networks: History and Context, The node, Connecting nodes, Networking Nodes, WSN and IoT.

UNIT III

Wireless Technologies for IoT: WPAN Technologies for IoT: IEEE 802.15.4, Zigbee, HART, NFC, Z-Wave, BLE, Bacnet, Modbus. IP Based Protocols for IoT IPv6, 6LowPAN, RPL, REST, AMPQ, CoAP, MQTT. Edge connectivity and protocols

UNIT IV

Data Handling & Analytics: Introduction, Bigdata, Types of data, Characteristics of Big data, Data handling Technologies, Flow of data, Data acquisition, Data Storage, Introduction to Hadoop. Introduction to data Analytics, Types of Data analytics, Local Analytics, Cloud analytics and applications, Applications of IoT, Home Automation, Smart Cities, Energy, Retail Management, Logistics, Agriculture, Health and Lifestyle, Industrial IoT, Legal challenges, IoT design Ethics, IoT in Environmental Protection.

- 2. Pethuru Raj and Anupama C. Raman, "The Internet of Things: Enabling Technologies, Platforms, and Use Cases", CRC Press.

RPE-04 (Research and Publication Ethics)

Credits: 2

Time: 3 Hrs.

Marks: 50

Theory: 30 IA: 20

Note: The question paper will consist of nine questions in all. The first question will be compulsory and will consist of five short questions of 2 marks each covering the whole syllabus. In addition, eight more questions will be set unit-wise comprising of two questions from each of the four units. The candidates are required to attempt four more questions selecting at least one question from each unit.

UNIT-I

Introduction to philosophy: definition, nature and scope, concept, branches, Ethics: definition, moral philosophy, nature of moral judgements and reactions, Ethics with respect to science and research, Intellectual honesty and research integrity, Scientific misconduct: Falsification, Fabrication, and Plagiarism (FFP), Redundant publication: duplicate and overlapping publications, salami slicing, Selective reporting and misrepresentation of data

UNIT-II

Publication ethics: definition, introduction and importance, Best practices standards setting initiatives and guidelines: COPE, WAME, etc., Conflicts of interest, Publication misconduct: definition, concept, problems that lead to unethical behavior and vice versa, types, Violation of publication ethics, authorship and contributorship, Identification of publication misconduct, complaints and appeals, Predatory publishers and journals, Open access publications and initiatives, SHERPA/ROMEO online resource to check publisher copyright & self-archiving policies.

UNIT-III

Software tool to identify predatory publications developed by SPPU, Journal finder/ Journal suggestion tools viz. JANE, Elsevier Journal Finder, Springer Suggester, etc., Subject specific ethical issues, FFP, authorship, Conflicts of interest, Complaints and appeals: examples and fraud from India and abroad, Use of plagiarism software like Turnitin, Ouriginal/Urkund, Viper, iThenticate and other open source software tools

UNIT-IV

Indexing databases; Citation databases: Web of Science, Scopus, Pubmed, ICI etc., Impact Factor of journal as per Journal Citation Reports. SNIP, SJR, IPP: Cite Score, Metrics: h-index, g index, i10 index, altmetrics.
