Sirsa-125055

Scheme of Examination

&

Detailed Syllabus

of

B. Tech (EE) 2nd year (onwards)

2023-24

Contents

1. Faculty of Engineering & Technology

The faculty covers the professional and academic programmes/courses run in the university teaching department of computer science and engineering, university school of graduate studies, affiliated general degree colleges, institute of computer applications and engineering colleges. BTech and MTech programmes in major disciplines and MCA, MSc Data Science, BSc Data Science, BCA programmes are managed by the faculty.

2. Learning Outcome based Curriculum Framework

The CBCS evolved into learning outcome-based curriculum framework and provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill-based courses. The courses can be evaluated following the grading system, which is considered to be better than the conventional marks system. Grading system provides uniformity in the evaluation and computation of the Cumulative Grade Point Average (CGPA) based on student's performance in examinations which enables the student to move across institutions of higher learning. The uniformity in evaluation system also enables the potential employers in assessing the performance of the candidates.

2.1 Objectives of the programme

Programme objectives of B. Tech. in different disciplines will be different. Programme objectives shall be specified with the full 8-semester curriculum of individual stream of engineering.

2.2 Programme Outcomes (POs)

PO1	**Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
PO2	**Problem analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences

PO3	**Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
PO4	**Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations
PO6	**The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice
PO7	**Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	**Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	**Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
PO11	**Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	**Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change

2.3 Programme Specific Outcomes (PSOs)

Programme objectives of B. Tech. in different disciplines will be different. Programme objectives shall be specified with the full 8-semester curriculum of individual stream of engineering.

3. Programme Structure

B. Tech. (All major disciplines/branches) programme an eight-semester (4-year) graduate programme comprises of various types of courses, namely, Basic Science Courses (BSC), Programme Core Courses (PC), Programme Elective Courses (PE), Engineering Science Courses (ESC), Humanities, Social Sciences and Management Courses (HSMC), Open Elective Courses (OE), Employability Enhancement Courses (EEC) and Mandatory Courses (MC).

*Program Specific Outcomes (PSOs)

PSO1 **Developing Computational Systems**: Use principles of electronics and Micro- Processors, various programming languages, data structures, database management systems, computer algorithms, theory of computation and software engineering for designing and implementing computational systems.

PSO2 **Devising Networking Solutions**: Apply the knowledge of systems in the areas related to network technologies, mobile ad hoc and sensor networks, cloud computing, IoT and, information and web security for devising networking solutions.

PSO3 **Doing Data Analytics and Designing Intelligent Systems**: Utilize the approaches and tools of artificial intelligence and soft computing, data analytics and machine learning for designing and working with intelligent systems that can extract valuable information from large amount of data and learn from their environment.

* Programme Outcomes (POs) of Bachelor Programmes in Engineering & Technology havebeen specified in First Year common curriculum of B. Tech. Programmes.

Course Code	Definition/ Category
BSC	Basic Science Courses

TOTAL			09/09	1/1	14/7	24/17
					Total Credits	17

Important Notes:

1. The Major Project should be initiated by the student in continuation of the VII semester and will be evaluated at the end of the semester on the basis of its implementation, presentation, delivered, viva-voce and report.
2. The Viva-Voce for Major Project by External Examiner and Chairperson of the Department / Internal Examiner at the end of the semester.

List of Program Electives for VIII Semester

Program Elective Course– IV

Sr. No.	Course Code	Nomenclature of Subject
1.	PE/EE/81-T	Flexible AC Transmission Systems (FACTS)
2.	PE/EE/82-T	Distributed Generation
3.	PE/EE/83-T	Power Quality
4.	PE/EE/84-T	Smart Grid Technologies

Program Elective Course– V

Sr. No.	Course Code	Nomenclature of Subject
1.	PE/EE/85-T	EHV AC and DC Transmission
2.	PE/EE/86-T	Restructured Power System
3.	PE/EE/87-T	High Voltage Engineering
4.	PE/EE/88-T	Big Data Analysis

Policy Document for providing exemptions in attendance to the B.Tech. students of the University for undertaking various internships/trainings during their final/penultimate semester

1.   Background:

It has been realized that the students pursuing B. Tech. programmes offered by the University/affiliated Institutes/Colleges are facing challenges as under:

1. Students selected in industry during their programme are asked to join the industry for internship/training of duration up to one semester.
2. The provision is not there in these programmes to allow the students to join the internship by way of getting the required attendance of semester from internship/training.
3. So, students are not able to join such internship/training consequential to two-fold loss:
   (a) Job opportunity.
   (b) Skill development in industry environment.

But, presently, in the B. Tech. Programmes run by the University, there is no provision for the students to join the industry for such internship/training of/for more than 6–8-week duration. To facilitate the students for joining longer duration internships/trainings, a need for framing a policy document was felt.

Keeping in view the above challenges/statutory position and to avoid hardship to students and to improve the employability of the students, Ch. Devi Lal University, Sirsa has framed a policy to accord exemptions in attendance to students undertaking various internships/trainings during their final/penultimate semester of the B. Tech. Programmes.

2.   Applicability of the policy with following Provisions:

The policy is applicable to the students studying in the final semester/ penultimate semester of B. Tech. programmes.

2.1   Provisions:

Student covered as per section title 'Applicability of the Policy' will be governed by the following provisions:

1. The student will be allowed to join the organization for internship/training in the final semester/ penultimate semester of the course for a period of up to one semester only if he/she must be passed/ cleared in all courses/subjects in all the semester examination whose results have been declared.
2. The student will earn his attendance from the organization during the period of internship.
3. Attendance will be certified by the organization, failing which student will be debarred from appearing in the University examinations of that semester.
4. The student will have to give an undertaking that he/she will appear in all the internal/external examination/practical as per requirements of the Programme and as per Schedule of the University examination for that programme. For this he/she will have to do the necessary preparation by himself/herself and Institute/department will not be responsible for the same.
5. If the student is selected in a company/industry/organization etc., and is asked to join the organization in the final semester/ penultimate semester for a period of upto one

semester; then formally constituted Internship Facilitation Committee (IFC) will examine and give its recommendation as deemed fit.

2.2   Composition of Internship Facilitation Committee (IFC):

The composition of IFC will be as under:

1. Dean, Faculty of Engg. & Tech./Director/ Principal (or Nominee) (Chairperson)
2. Chairperson/Head/ In-charge of the concerned Department/Branch (Member)
3. In-Charge Academic Branch/Academic In-charge of Institute (Member)
4. Senior most faculty of the department other than Chairperson/ Director/Head of the Department/Branch (Member)
5. Training and Placement officer/ In-Charge TPO of the Institute /College/Department   (Member Secretary)

Any offer by the organisations providing internship on demanding charges from a student will be discouraged by the Internship Facilitation Committee (IFC). Member Secretary of the IFC will schedule the meeting and maintain all the records.

3.   Conclusion:

The students can only be allowed to join the internship/training in company/ industry/ organization etc. with exemptions in attendance on the final recommendation of Internship Facilitation Committee (IFC) of the Institute / Department and permission given by the Department/Institute/College authority.

*Non-credit qualifying course. The assessment will be completely internal

**The students will have to prepare and submit a project report of the Industrial Training/ Internship of 6-8 weeks done during summer vacations after the examination of IV semester under the supervision of faculty during V semester.

Note: Students will be allowed to use non-programmable scientific calculators only; however, sharing of calculator should not be permitted.

Detailed Syllabus of

B.Tech. (EE)

3rd Semester

ELECTRICAL CIRCUITS AND NETWORKS

General Course Information:

<table>
<tr>
<td>

Course Code: PC/EE/31-T

Course Credits: 4.0

Mode: Lecture (L) and Tutorial (T)

Type: Program Core

Teaching Schedule L T P: 3 1 0

Examination Duration: 3 hours

</td>
<td>

Course Assessment Methods; Max. Marks: 100 (Internal: 30; External: 70)

Three minor tests, each of 20 marks, will be conducted. The third minor will be conducted in open book mode by the Course Coordinator. No date sheet will be issued for the third minor at the level of the Departments. For the purpose of internal assessment, the average of the highest marks obtained by a student in any two minor examinations will be considered. All the minor examination question papers will be prepared and evaluated by following the Outcome Based Education framework. Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks).

The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

</td>

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Recall the fundamental of network theorems	**L1(Remembering)**
CO2.	Understand and derive the response of electrical circuits and characteristics and parameters of two port networks	**L2(Understanding)**
CO3.	Apply the knowledge of network analysis in technical problem solving	**L3(Applying)**
CO4.	Perform analysis and synthesis of two port networks applicable in various engineering problems	**L4(Analyzing)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Network topology and theorems: Classification of circuits, sources and signals, standard signals, source transformations, Network topology, graph matrices, formulation and solution of circuit equations based on graph theory using different analysis techniques- circuit, cut set and mixed. Concept of duality, Network theorems and their applications- Superposition, reciprocity, Thevenin, Norton, Maximum power transfer, Millman, Substitution, Compensation and Tellegen's theorem.

UNIT- II

Transient response: Introduction to non-linear circuits and their analysis, Analysis of circuits with dependent sources, Transient response under D.C. and A.C. excitation, Analysis of magnetically coupled circuits, Series and parallel resonance circuits, bandwidth and Q-factor, response with variation in parameters and frequency.

UNIT- III

Two-port networks and Parameters: Concept of one port, two-port networks, characteristics and parameters (impedance parameters, admittance parameters, transmission parameters and hybrid parameters), interrelationships of parameters, image & iterative impedance, concept of characteristic impedance, scattering parameters, insertion loss, interconnection of two-port networks, analysis of terminated two-port networks, extensions to multiport networks.

UNIT- IV

Network functions and Synthesis: Generalized network functions (Driving point and Transfer), concepts of poles and zeros, determination of free and forced response from poles and zeros, concept of minimum phase networks, analysis of ladder, lattice, T and bridged-T networks, Network synthesis-Synthesis problem formulation, properties of positive real functions, Hurwitz polynomials, properties of RC, LC and RL driving point functions, Foster and Cauer synthesis of LC and RC circuits.

ELECTRONIC DEVICES AND CIRCUITS

General Course Information:

Course Code: **PC/EE/32-T** Course Credits: 3.0 Mode: Lecture (L) Type: Program Core Teaching Schedule L T P: 3 0 0 Examination Duration: 3 hours	**Course Assessment Methods; Max. Marks: 100 (Internal: 30; External: 70)** Three minor tests, each of 20 marks, will be conducted. The third minor will be conducted in open book mode by the Course Coordinator. No date sheet will be issued for the third minor at the level of the Departments. For the purpose of internal assessment, the average of the highest marks obtained by a student in any two minor examinations will be considered. All the minor examination question papers will be prepared and evaluated by following the Outcome Based Education framework. Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks). The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Outline semiconductors, diodes, transistors, operational amplifiers and digital circuits	**L1 (Remembering)**
CO2.	Explain about different power amplifier circuits, their design and use in electronics and communication circuits	**L2 (Understanding)**
CO3.	Demonstrate and interpret the working of analog and digital electronic devices and circuits	**L3 (Applying)**
CO4.	Distinguish between various logic families and their characteristics	**L4 (Analyzing)**
CO5.	Design and implement analog, combinational and sequential logic circuits applicable in various engineering problems	**L6 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Contents

UNIT-I

Diode and Transistor biasing circuits: P-N junction diode, I-V characteristics of a diode, Zener diodes, clamping and clipping circuits, Transistor biasing circuits: Base bias, Emitter-feedback bias, collector-feedback bias, Voltage divider bias, emitter bias, CE, CC and CB analysis, JFET: Gate bias, Self bias, Voltage-divider bias and source bias, current source bias, CS, CD and CG amplifier, MOSFET: Depletion type, Enhancement type and their biasing, Power Amplifiers: Class A, B, C, D power amplifiers

<div align="center">

UNIT-II

</div>

OP-AMP: Differential amplifier and its DC, AC analysis, OP-AMP characteristics, Non-Inverting/Inverting Voltage and Current feedback, Linear and Non-Linear OP-AMP circuits, Regulated power supplies**.**

Oscillators- Barkhausen criteria of oscillations, Wein-bridge, RC oscillator, 555 timer: its monostable and astable operation.

<div align="center">

UNIT-III

</div>

Logic gates and Boolean Algebra: Logic gates, Universal gates, number systems-binary, signed binary, octal hexadecimal number, binary arithmetic, one's and two's complements arithmetic

Logic Families: transistor as a switching element, Tri-state switch, Bipolar logic Families: RTL, DTL, TTL, ECL, IIL, MOS Logic families: NMOS, CMOS families and characteristics, various logic functions and their implementation.

<div align="center">

UNIT-IV

</div>

Combinational Circuits: Introduction to combinational circuits, arithmetic and logical operation, design of Half adder & full adder, subtractor circuits, decoders, multiplexers, demultiplexers, comparators, Sequential Circuits: Flip-flops, bistable circuits: RS, JK, D, T, Master/Slave Flip-flop, race around condition, latches, synchronous and asynchronous counters up & down counters, shift Registers.

CO1.	Recall the basics of electric machines	**L1(Remembering)**
CO2.	Describe the performance of different types of electric machines.	**L2(Understanding)**
CO3.	Solve the problems related with electric machines.	**L3(Apply)**
CO4.	Compare the performance characteristics of electric machines.	**H1(Analysis)**
CO5.	Judge and use the machines on the basis of their utilization and performance.	**H2 (Evaluating)**

*Revised Bloom's Taxonomy Action verbs/Level

Course Content

UNIT-I

Electromechanical Energy Conversion and Single Phase Transformer: Energy in a magnetic systems, field energy and mechanical force, energy in singly and multiply excited magnetic systems. Transformer construction, theory and operation, E.M.F. equation, Ideal and practical trans former, exact and approximate equivalent circuits, no load and on load operation, phasor diagrams, power and energy efficiency, open and short circuit tests, back to back test, voltage regulation, effect of load on power factor, Per Unit transformer values, excitation phenomenon in transformers, Auto transformers (construction, working & applications)

UNIT-II

Three Phase and Other Transformers: Constructional features of three phase transformers, Cooling methodology, parallel operation of single phase and three phase transformers, three phase transformer connections, phasor groups, three phase to two phase and six phase conversion. Three winding transformers and its equivalent circuit, Tap changing of transformers, tertiary winding, Applications. Variable frequency

transformer, voltage and current transformers, Grounding transformer, welding transformers, Pulse transformer and applications.

UNIT-III

DC Generators: Construction, working and types of dc generator, EMF equation, lap & wave winding, distributed & concentrated windings, armature reaction, commutation, interpoles and compensating windings, characteristics of dc generators, voltage build up, Parallel operation of DC generators, Applications.

UNIT-IV

D.C. Motors: Principles of working, Significance of back emf, Torque Equation, Types and Characteristics of DC Motors, Need of Starter, three point starter, four point starter, Speed Control (armature resistance, flux control, armature voltage, Thyristor), Ward-Leonard system, Swinburne's test, Hopkinson's test, braking of dc motor (regenerative, Dynamic, Plugging), Losses and Efficiency, Effect of saturation and armature reaction on losses; Applications.

CO1.	Describe and analyze different types of sources and mathematical expressions related to thermodynamics and various terms and factors involved with power plant operation.	**L1(Remembering)**
CO2.	Summarize the working and layout of steam power plants and discuss about its economic and safety impacts.	**L2(Understanding)**
CO3.	Illustrate the working principle and basic components of the nuclear power plant, diesel engine and the economic and safety principles involved with it.	**L3(Apply)**
CO4.	Examine the mathematical and working principles of different electrical equipment's involved in the generation of power.	**L4(Analysis)**
CO5.	Evaluate the different power generating systems	**L5(Evaluating)**
CO6.	Construct the model on the applications basis of power plant	**L6(Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Load and loading forecasting: Load curves, maximum demand, load factor, diversity factor, capacity factor, utilization factor, types of loads, load forecasting.

Power plant economics: Choice of type of generation, size of generator and number of units, cost of electrical energy, depreciation of plant, effect of load factor on cost of electrical energy.

UNIT- II

Thermal power plants: Choice of site, main and auxiliary equipment fuel gas flow diagram, water stream flow diagram, working of power plants and their layout, characteristics of turbo generators.

Hydroelectric plants: Choice of site, classification of hydroelectric plants, main parts and working of plants and their layouts, characteristics of hydro electric generators.

UNIT- III

Nuclear power plants: Choice of site, classification of plants, main parts, layout and their working, associated problems.

Diesel power plants: Diesel plant equipment, diesel plant layout and its working, application of diesel plants.

UNIT- IV

Combined working of plants: Advantages of combined operation plant requirements for base load and peak load operation. Combined working of run off river plant and steam plant.

Tariffs and power factor improvement: Different types of tariffs and methods of power factor improvement.

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Fourier Series and Fourier Transforms: Euler's formulae, conditions for a Fourier expansion, change of interval, Fourier expansion of odd and even functions, Fourier expansion of square wave, rectangular wave, saw-toothed wave, half and full rectified wave, half range sine and cosine series.

UNIT-II

Fourier integrals, Fourier transforms, Shifting theorem (both on time and frequency axes), Fourier transforms of derivatives, Fourier transforms of integrals, Convolution theorem, Fourier transform of Dirac delta function.

Linear Programming Problem (LPP): Introduction, Formulation of linear programming problem (LPP); Graphical method for its solution; Standard form of LPP; Basic feasible solutions; Simplex Method and Dual Simplex Method for solving LPP.

UNIT-III

Functions of Complex Variable: Definition, Exponential function, Trigonometric and Hyperbolic functions, Logarithmic functions. Limit and Continuity of a function, Differentiability and Analyticity. Cauchy-Riemann equations, necessary and sufficient conditions for a function to be analytic, polar form of the Cauchy-Riemann equations. Harmonic functions.

UNIT-IV

Complex integral, Cauchy Goursat theorem (without proof), Cauchy integral formula (without proof), Power series, radius and circle of convergence, Taylor's Maclaurin's and Laurent's series. Zeroes and singularities of complex functions, Residues. Evaluation of real integrals using residues (around unit and semi-circle only).

ELECTRONIC DEVICES AND CIRCUITS LABORATORY

General Course Information:

Course Code: **PC/EE/32-P** Course Credits: 1 Mode: Practical Type: Program Core Contact Hours: 2 hours per week.	**Course Assessment Methods (Internal: 50; External: 50)** Internal continuous assessment of 50 marks by course coordinator as per the course assessment method (Annexure I). For the end semester practical examination, the assessment will be done out of 50 marks by the external and internal examiners as per the course assessment method (Annexure I).

Course Outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Perform Experiments and acquire specific technical knowledge of operations of Semiconductor devices and digital circuits.	**LOTS L3 (Applying)**
CO2.	Analyze various operations, characteristics and performance of various analog and digital devices.	**HOTS L4 (Analyzing)**
CO3.	Examine working of OP-AMP based amplifiers and arithmetic operational circuits.	**LOTS L3 (Applying)**
CO4.	Infer the applications of combinational and sequential circuits.	**HOTS L4 (Analyzing)**
CO5.	Organize reports based on experiments performed with effective demonstration and analysis of results.	**HOTS L4 (Analyzing)**
CO6.	Inculcate ethical practices while performing experiments individually and in groups.	**LOTS L3 (Applying)**

*Revised Bloom's Taxonomy Action verbs/Level

LIST OF EXPERIMENTS:

1. To study and obtain the V-I characteristics of P-N Junction Diode and Zener Diode.
2. To study and obtain the characteristics of BJT (NPN, PNP).
3. To study and obtain the characteristics of JFET (N-channel, P-channel), MOSFET (N-channel, P-channel).
4. To observe the performance of Common emitter amplifier (b) Common base amplifier (c) common collector amplifiers
5. To obtain the characteristics of Wein-bridge, RC oscillator.
6. To study the following mathematical operations using Op-amps: -Addition (b) Subtraction (c) Multiplication (d) Division (e) Integration (f) Differentiation
7. To study the Op-amp as: a) stable multivibrator (b) Mono-stable multivibrator (c) Schmitt Trigger circuit
8. To study OP-AMP as non-inverting voltage amplifier, low pass filter, high-pass filter and band pass filter
9. To study NOT, AND, OR, NOR, XOR, XNOR gates.
10. To study and verify the truth table of R-S, D, J-K and T flip flop.
11. To study the operation of BCD to Decimal, BCD to Excess 3, BCD to Gey Code & BCD to 7 Segment and vice-versa.
12. To study the combinational circuit of half adder, full adder, subtractor, encoder, decoder, multiplexer, demultiplexer and 4-bit digital comparator.
13. To verify the operation of a 4 bit UP and DOWN counter, serial/parallel counter
14. To study the shift register SISO, SIPO, PISO, PIPO using shift register.

NOTE: At least eight experiments are to be performed in the semester, out of which at-least six experiments should be performed from above list. Remaining experiments may either be performed from the above list or designed & set by the concerned course coordinator as per the scope of the syllabus.

ELECTRICAL MACHINES-I LABORATORY

General Course Information

Course Code: **PC/EE/33-P** Course Credits: 2 Mode: Practical Type: Program Core Contact Hours: 4 hours/week	**Course Assessment Methods (Internal: 50; External: 50)** Internal continuous assessment of 50 marks by course coordinator as per the course assessment method (Annexure I). For the end semester practical examination the assessment will be done out of 50 marks by the external and internal examiners as per the course assessment method (Annexure I).

Course Outcomes

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT*Level
CO1.	**Perform** experimental work to test and examine the performance of static and rotating electrical machines under different operating conditions.	**HOTS L4** **(Analysis)**
CO2.	**Analyze** various performance characteristics with tabular and graphical representation of electric machines.	**HOTS L4** **(Analysis)**
CO3.	**Compare** the performance of electrical machines with ratings on the basis of their utilization and efficiency.	**HOTS L5** **(Evaluating)**
CO4.	**Design** electrical machine models for various engineering problems as per required specifications.	**HOTS L6** **(Creating)**
CO5.	**Organize** reports based on experiments performed with effective demonstration and analysis of results.	**HOTS L4** **(Analysis)**
CO6.	**Inculcate** ethical practices while performing experiments individually and in groups.	**LOTS L3** **(Apply)**

*Revised Bloom's Taxonomy Action verbs/Level

LIST OF EXPERIMENTS:

1. To find the turns ratio & polarity of a single phase transformer.
2. To perform the open & short circuit tests on a single phase transformer.
3. To perform Sumpner's Back to back test on single phase transformers.
4. To perform the parallel operation of two single phase transformers for load sharing.
5. To perform the various connections on three phase transformer.
6. To convert three phase to two phase by using Scott-connection
7. To perform load test on DC Shunt Generator and determine its performance characteristics.
8. To perform load test on DC Series Generator and determine its performance characteristics.
9. To obtain magnetization characteristics of separately excited DC Machine.
10. To obtain magnetization characteristics of self-excited DC Machine.
11. To perform speed control on a DC Shunt Motor using armature control and field control method.
12. To determine the efficiency of DC Shunt Motor using Swinburne's Test.
13. To determine the efficiency of a DC Machine using Hopkinson's Test.
14. To study and perform the field test on two identical D.C. series machines
15. To study the Ward Leonard method of speed control on DC Motor.

NOTE: At least eight experiments are to be performed in the semester, out of which at-least six experiments should be performed from the above list. Remaining experiments may either be performed from the above list or designed & set by the concerned institution as per the scope of the syllabus.

CO5.	**Organize** reports based on experiments performed with effective demonstration and analysis of results.	**HOTS L4** **(Analyzing)**
CO6.	**Inculcate** ethical practices while performing experiments individually and in groups.	**LOTS L3** **(Applying)**

*Revised Bloom's Taxonomy Action verbs/Level

LIST OF EXPERIMENTS:

1. To study the use of different types of tools, electrical material, symbols and its abbreviations for electrical engineering workshop laboratory.
2. To study different types of wiring & practices for staircase, corridor & godown wiring.
3. To study & perform fluorescent lamp, tube light, CFL, LED & its series and parallel Connections.
4. To study operation and working of Sodium Vapour Lamp.
5. To study operation and working of high-Pressure Mercury Vapour Lamp
6. To study various types of wires/ cables and practices of switches.
7. To study the importance of earthing and measurement of earth resistance.
8. Familiarization and repairing practice of home appliances such as: mixer machine, electric iron, fan motor, pump motor, battery etc.
9. To study the different fuses, SFU, MCB, ELCB, MCCB.
10. To study moving iron, moving coil, electrodynamics and induction type meter.
11. To study & calibrate single phase energy meters.
12. To study different types of transformers and assembling practices of transformers.
13. To study the design of solar system for small houses.
14. To study the design of SMPS circuit.
15. To perform Soldering and De-soldering operation on circuit.

NOTE: At least eight experiments are to be performed in the semester, out of which at-least six experiments should be performed from the above list. Remaining experiments may either be performed from the above list or designed & set by the concerned institution as per the scope of the syllabus.

INDIAN CONSTITUTION

Course code	MC/3-T			
Category	Mandatory Courses			
Course title	Indian Constitution			
Scheme and Credits	L	T	Credits	
	3	0	0.0	
Course Assessment Methods	**Internal Examination (30 marks):** □ Three minor tests each of 20 marks will be conducted. The average of the highest marks obtained by a student in the any of the two minor examinations will be considered. □ Class Performance will be measured through percentage of lectures attended (04 marks) □ Assignments, quiz etc. will have weightage of 06 marks **End semester examination (70 marks):** □ Nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Two questions are to be set from each unit. All questions will carry equal marks. □ A candidate is required to attempt 05 questions in all, one compulsory and remaining four questions selecting one from each of the four units.			

Course Contents

UNIT I

Basic features and fundamental principles
Meaning of the constitution law and constitutionalism
Historical perspective of the Constitution of India
Salient features and characteristics of the Constitution of India
Scheme of the fundamental rights
The scheme of the Fundamental Duties and its legal status

UNIT II

The Directive Principles of State Policy – Its importance and implementation
Federal structure and distribution of legislative and financial powers between the Union and the States
Parliamentary Form of Government in India – The constitution powers and status of the President of India

UNIT III

Amendment of the Constitutional Powers and Procedure

The historical perspectives of the constitutional amendments in India Emergency Provisions: National Emergency, President Rule, Financial Emergency Local Self Government – Constitutional Scheme in India

UNIT IV

Scheme of the Fundamental Right to Equality
Scheme of the Fundamental Right to certain Freedom under Article 19
Scope of the Right to Life and Personal Liberty under Article 21

Detailed Syllabus of

B. Tech. (EE)

4th Semester

B. Tech. 2nd Year**B. Tech. 2nd Year Semester-IV**

#	Course Code	Course Title	Workload/ Credit			
			Theory	**Tutorial**	**Practical**	**Total**
1.	PC/EE/41-T	Power Electronics	3/3	1/1	0/0	4/4
2.	PC/EE/42-T	Electrical Machines-II	3/3	1/1	0/0	4/4
3.	PC/EE/43-T	Power Systems-I	3/3	0/0	0/0	3/3
4.	PC/EE/44-T	Fields and Waves	3/3	1/1	0/0	4/4
5.	PC/EE/45-T	Signals and Systems	3/3	1/1	0/0	4/4
6.	PC/EE/41-P	Power Electronics Laboratory	0/0	0/0	2/1	2/1
7.	PC/EE/42-P	Electrical Machines-II Laboratory	0/0	0/0	4/2	4/2
8.	PC/EE/43-P	Power Systems-I Laboratory	0/0	0/0	2/1	2/1
9.	MC/4-T	Essence of Indian Traditional Knowledge	3/0	0/0	0/0	3/0
10.	HSMC/2-T	Human Values and Personality Development	2/2	0/0	0/0	2/2
	TOTAL		20/17	4/4	8/4	32/25
					Total Credits	**25**
1.	EEC/EE/51	Industrial Training/ Internship-I	0/0	0/0	2/1	2/1

Important Notes:

1. The students will have to undergo Industrial Training/ Internship-I for 4-6 weeks during summer vacationsat the end of 4th semester which will be evaluated in 5th semester.

2. Students will be allowed to use non-programmable scientific calculators only, however, sharing of calculator should not be permitted.

POWER ELECTRONICS

General Course Information:

Course Code: PC/EE/41-T Course Credits: 4.0 Mode: Lecture (L) and Tutorial (T) Type: Program Core Teaching Schedule L T P: 3 1 0 Examination Duration: 3 hours	**Course Assessment Methods; Max. Marks: 100 (Internal: 30; External: 70)** Three minor tests, each of 20 marks, will be conducted. The third minor will be conducted in open book mode by the Course Coordinator. No date sheet will be issued for the third minor at the level of the Departments. For the purpose of internal assessment, the average of the highest marks obtained by a student in any two minor examinations will be considered. All the minor examination question papers will be prepared and evaluated by following the Outcome Based Education framework. Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks). The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Recall the fundamental of electronics devices and circuit	**L1(Remembering)**
CO2.	Describe various power semiconductor devices, passive components and switching circuits.	**L2(Understanding)**
CO3.	Deploy power converter circuits design and learn to select suitable power electronic devices by assessing the requirements of application fields.	**L3(Apply)**
CO4.	Compare, formulate and analyze a power electronic circuit design and assess the performance.	**L4(Analysis)**
CO5.	Estimate the critical areas for improvement in an industries and derive typical alternative solution.	**L5(Evaluating)**
CO6.	Design a suitable power converters to control Electrical Motors and other industry grade apparatus	**L6(Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Modern Power Electronics Devices: Introduction to power Electronics, hierarchical study, advantages and applications**,** Principle of operation of SCR, dynamic characteristic of SCR during turn ON and turn OFF, Two transistor analogy, Protection of SCR, Commutation circuits, SCR ratings, Triggering Methods, Series and Parallel operation of SCR.

UNIT- II

Single-phase Converter: Single-phase Half wave converter, Single-phase 2-pulse midpoint converter, Single-phase half controlled and fully controlled bridge full-wave thyristor converters with R-load and inductive load, input current and output voltage waveforms, Effect of load and source impedance, expressions for output voltage, Effect of free-wheeling diode, triggering circuits, Dual converter.

Three-phase Converter: Three Phase Half wave, full wave, half controlled and fully controlled bridge converters, Three-phase full-bridge thyristor rectifier with R-load and inductive load, Effect of load and source impedance, Expressions for output voltage, Dual Converter.

UNIT- III

Inverters: Classification, basic series and improved series inverter, parallel inverter, single phase and three phase voltage source inverter, 120 degree mode and 180 degree mode conduction schemes, modified McMurray half bridge and full bridge inverters, McMurray -Bedford half bridge and full bridge inverters, brief description of parallel and series inverters, current source inverter (CSI), transistor and MOSFET based inverters

UNIT- IV

AC Voltage Controllers& Regulators: Single phase and three phase ac voltage controllers with R, RL and RLE loads, Single phase two SCR's in anti-parallel with R and RL loads, Voltage control, Operation waveforms, Types of voltage regulator, equation of load current, output voltage equation, synchronous tap changer, three phase regulator.

Cyclo-converter: Principle of operation of cyclo-converter, non-circulating and circulating types of cyclo-converters. Waveforms, control technique**.**

Outcomes

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Recall the basics of electric machines	**L1(Remembering)**
CO2.	Illustrate the performance of different types of rotating electric machines.	**L2(Understanding)**
CO3.	Solve the problems related with rotating electric machines.	**L3(Apply)**
CO4.	Compare the performance characteristics of rotating electric machines.	**H1(Analysis)**
CO5.	Judge and use the rotating electric machines on the basis of their utilization and performance.	**H2 (Evaluating)**

*Revised Bloom's Taxonomy Action verbs/Level

Course Content

UNIT-I

Poly Phase Induction Motors: Construction details of three-phase induction motor, Rotating magnetic field, principle of operation, slip, Induction motor as generalized transformer-Equivalent circuit, expression for torque, full load torque, maximum torque, starting torque and output power, torque-slip and torque-speed characteristics, no load and blocked rotor test, circle diagram, introduction to deep bar cage and double cage induction motor, starting of induction motors, speed control of induction motor, cogging &crawling, Applications.

UNIT-II

Synchronous Generators: Alternators: Construction features and types, EMF equation of alternators, armature reaction in alternators, Alternator on load, Synchronous reactance, Synchronous Impedance, Voltage regulation, Determination of voltage regulation using EMF, MMF methods, ZPF, Ampere Turn methods and

Potier Triangle, Synchronizing and parallel operation of alternators, Salient pole synchronous machine, two-reaction theory, slip test, Applications.

UNIT-III

Synchronous Motor: Principle of operation, Methods of starting, Torque and power equations, Synchronous motor on load, Synchronous motor on constant excitation variable load, Synchronous motor on constant load variable excitation, 'V' and inverted 'V' curves, Synchronous condenser, Hunting and its suppression, Behaviors of synchronous machine on short circuit, capability curves, Applications.

UNIT-IV

Single Phase Induction & Special Motors: Single Phase Induction Motor,Double revolving field theory,Stepper Motor, Brushless DC motor, Servomotors, Shaded Pole Motor, Reluctance Motor, Hysteresis Motor, Single Phase Series Motor, Repulsion Motor, Schrage Motor, Linear Induction Motor.

CO3.	Investigate the performance of transmission lines by calculating voltage regulation and efficiency	**L3(Applying)**
CO4.	Analyze the mechanical and electrical design aspects of transmission system	**L4(Analyzing)**
CO5.	Compare between different supply systems, Overhead transmission lines and underground cables and select the appropriate according to the need.	**L5(Evaluating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content
UNIT- I

Basic Concepts: Importance of electric power, single line diagram of power system, Modeling of power system components, Per unit system, Symmetrical and unsymmetrical components, Representation of generators, lines and transformers in sequence networks, Growth of power systems in India, power supply networks: effect of voltage on conductor size, comparison of conductor volume in typical supply systems, elementary high voltage DC transmission DC transmission and its advantages and disadvantages.

UNIT- II

Transmission line parameters: Calculations of resistance, inductance, and capacitance for single phase, three phase single circuit and double circuit lines, skin and proximity effect.

Performance of lines: Classification of lines as short, medium and long, representation and detailed performance analysis of these lines including ABCD parameters, Surge Impedance loading, Ferranti's effect, Power flow through a transmission line and power circle diagrams

UNIT- III

Mechanical considerations: Various types of line conductors, line supports, poles and towers, sag calculations, effect of wind, ice and temperature, stringing chart, sag template, line vibrations.
Insulators: various types of insulator, voltage distribution, string efficiency, methods of increasing string efficiency.
Corona: Phenomenon of corona, disruptive critical voltage, visual critical voltage, corona loss, radio interference.

UNIT- IV

Underground cables: Classification and construction, insulation resistance, capacitance, capacitance determination, power factor in cables, capacitance grading, use of inter sheaths, losses, heat dissipation and temperature rise in cables, current rating, Faults in cables, comparison with overhead lines
Distribution Systems: components – feeders, distributers, service mains, connections schemes of distribution, Introduction to distributed generation

Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks). The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course Outcomes

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Recall the basics of coordinates(2 D & 3D)	**L1(Remembering)**
CO2.	Describe the electromagnetic waves and theory.	**L2(Understanding)**
CO3.	Solve the problems related with electromagnetic waves and theory.	**L3(Apply)**
CO4.	Compare the performance of electromagnetic waves on the basis of different theories.	**H1(Analysis)**
CO5.	Judge the characteristics of electromagnetic waves and utilize them as per their requirements.	**H2 (Evaluating)**

*Revised Bloom's Taxonomy Action verbs/Level

Course Content

UNIT-I

Introduction of Coordinates: Cartesian coordinates, cylindrical coordinates, spherical coordinates, Vector calculus: Differential length, area and volume, line surface and volume integrals and their significance, Del operator, gradient of a scalar, divergence of a vector and divergence theorem, curl of a vector and Stoke's theorem

UNIT-II

Electrostatics: Electrostatic fields, Field intensity, Electric flux density, Coulomb's Law, Electric field and potential due to point, line, plane and charge distribution, Gausses's Law and application, Electric field in material space: Properties of materials, conductors, dielectric constants, Effect of dielectric medium, continuity equation, boundary condition. Poisson's and Laplace's equations, Equipotential Surfaces, Uniqueness Theorem, capacitance, method of images.

UNIT-III

Magnetostatics: Magneto-static fields, Magnetic flux density, Magnetic field Intensity, Biot-Savart's Law, Ampere's circuit law ,Faraday Law of Induction, application of ampere's law, - Maxwell's equation, Maxwell's equation for static fields, for harmonically varying fields, for free space, magnetic vector potential. Lorentz Force, magnetization in materials, magnetic boundary conditions, Self and mutual inductances, Relation between E and H.

UNIT-IV

Electromagnetic Waves: Polarization, Reflection of plane wave for perfect conductor, perfect dielectric at normal incidence as well as oblique incidence, Electromagnetic wave propagation, Depth of Penetration, Brewester's Angle Poynting Theorem and interpretation of Poynting vector.

Transmission lines: Transmission line parameters, Transmission line equations, input impedance, Characteristic Impedance, Reflection Coefficient, Standing wave ratio, Smith chart and its application.

Course outcomes:

Sr.No.	Course Outcomes At the end of the semester, students will be able to:	RBT* Level
CO 1	Describe various signals and their behaviour involved in processing.	**L1 (Remembering)**
CO 2	Classify different systems used for signal processing and operation and Conceptualize the effects of sampling a CT signal	**L2 (Understanding)**
CO 3	Demonstrate the Conversion of signals in analog domain to digital domain using various transforms	**L3 (Applying)**
CO 4	Analyze CT and DT systems using Laplace transforms and Z-Transforms.	**L4(Analyzing)**
CO 5	Modeling different systems with detailed analysis of LTI systems according to different types of applications	**L6 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT-I

Introduction to Signals: Signal Definition, Classification of Signals, Basic/Singularity Continuous and Discrete-Time Signals, Basic operations: Time Shifting, Time Reversal, Time Scaling on signals, Signal representation in terms of singular functions, Correlation of Signals and its Properties, Representation of a Continuous-Time Signal by its Samples: The Sampling Theorem, Reconstruction, Aliasing.

UNIT-II

Types of Systems: System, classification of Systems: Linear & Nonlinear Systems; Static & Dynamic Systems, Causal & Non-causal System, Invertible & Noninvertible, Stable & Unstable System, Time variant & Time Invariant Systems with examples.

Linear Time-Invariant Systems: Definition and Properties, Impulse Response, Convolution Sum/Integral and its Properties, Representation of LTI systems using Differential and Difference equations.

UNIT- III

Fourier Series & Fourier Transform: Introduction to Frequency domain Representation, Fourier Series Representation of Periodic Signals, Convergence of Fourier Series, Properties of Fourier Series, Fourier Transform for periodic and aperiodic signals, Convergence of Fourier Transform, Properties of Fourier Transform, Applications of Fourier Transform.

Discrete-Time Fourier Transform: Fourier Transform representation for Discrete –Time Aperiodic & Periodic Signals, Properties of Discrete-Time Fourier Transform, Basic Fourier Transform Pairs**.**

UNIT-IV

Laplace Transform: Introduction to Laplace transform, Region of convergence(ROC), relation with Fourier transform, Properties, Inverse of Laplace transform, Application to LTI systems, their interconnections and block diagram

Z-Transform: Introduction to Z-Transform, Region of convergence (ROC), Z-Transform Properties, Inverse Z-Transform, Analysis of LTI Systems using Z-Transform, Application of Z- transform, Introduction to Hilbert Transform.

POWER ELECTRONICS LABORATORY

General Course Information:

Course Code: **PC/EE/41-P** Course Credits: 1 Mode: Practical Type: Program Core Contact Hours: 2 hours per week	**Course Assessment Methods (Internal: 50; External: 50)** Internal continuous assessment of 50 marks by course coordinator as per the course assessment method (Annexure I). For the end semester practical examination the assessment will be done out of 50 marks by the external and internal examiners as per the course assessment method (Annexure I).

Course Outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	**Experimental** work and acquire thorough knowledge of various power converters for electric drives control applications.	**HOTS L4** **(Analyzing)**
CO2.	**Analyze** the performance characteristics of power electronics devices.	**HOTS L4** **Analyzing**
CO3.	**Judge** the suitability of power converter for speed control of various rotating electrical machines.	**HOTS L5** **(Evaluating)**
CO4.	**Demonstrate** operation of various power inverters and rectifiers with different Load conditions.	**LOTS L3** **(Applying)**
CO5.	**Organize** reports based on experiments performed with effective demonstration and analysis of results.	**HOTS L6** **(Creating)**
CO6.	**Inculcate** ethical practices while performing experiments individually and in groups.	**LOTS L3** **(Applying)**

*Revised Bloom's Taxonomy Action verbs/Level

LIST OF EXPERIMENTS:

1. To study performance and draw the V-I characteristics of Silicon Controlled Rectifier.
2. To study performance and draw the V-I characteristics of TRIAC.
3. **(a)** To study operation and performance of various types of Firing Circuits of turning on of a Silicon Controlled Rectifier.
   (b) To study operation and performance of various types of Commutation techniques of commutating/ turning off of a Silicon Controlled Rectifier.
4. To study the light intensity control using SCR and TRIAC and understand the operation of control of intensity of light.
5. To obtain and plot the output (Voltage & Current) wave form of single-phase half-wave & full-wave uncontrolled rectifiers for R and R-L load.
6. To analyse and plot the output wave form of single-phase half-controlled and fully-controlled full-wave rectifier for R and R-L load.
7. To analyse the performance characteristics of three-phase half controlled & fully controlled bridge converters for R load and sketch its output wave form.
8. To observe and analyse the output (Voltage & Current) wave form of Three-phase six pulses fully controlled rectifier feeding R and RL loads.
9. To study performance and operation of single-phase Dual Converters.
10. To study performance and operation of single-phase AC voltage regulators for R and R-L load.
11. To study performance and operation of single-phase Bridge inverter.
12. **(a)** To study performance and operation of single-phase Series inverter.
    (b) To study performance and operation of single-phase Parallel inverter.
13. .To study performance and operation of single phase AC voltage regulators for R and R-L load.

14. To study performance and operation of Single-phase PWM inverters using IGBT.
15. To sketch the output (Voltage & Current) wave form of a single phase cycloconverter.
16. To study performance and operation of three phase cyclo-converter.

NOTE: At least eight experiments are to be performed in the semester, out of which at-least six experiments should be performed from the above list. Remaining experiments may either be performed from the above list or designed & set by the concerned course coordinator as per the scope of the syllabus.

ELECTRICAL MACHINES-II LABORATORY

General Course Information:

Course Code: **PC/EE/42-P**	**Course Assessment Methods (Internal: 50; External: 50)**
Course Credits: 2	Internal continuous assessment of 50 marks by course coordinator as per the course assessment method (Annexure I).
Mode: Practical(P)	
Type: Program Core	
Contact Hours: 4 hours/week.	For the end semester practical examination the assessment will be done out of 50 marks by the external and internal examiners
.	as per the course assessment method (Annexure I).

Course Outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Perform experimental work to test and examine the performance of static and rotating electrical machines under different operating conditions.	HOTS L4 (Analysis)
CO2.	Analyze various performance characteristics with tabular and graphical representation of electric machines.	HOTS L4 (Analysis)
CO3.	Compare the performance of electrical machines with ratings on the basis of their utilization and efficiency.	HOTS L5 (Evaluating)
CO4.	Design machine models for various engineering problems as per required specifications.	HOTS L6 (Creating)
CO5.	Organize reports based on experiments performed with effective demonstration and analysis of results.	HOTS L4 (Analysis)
CO6.	Inculcate ethical practices while performing experiments individually and in groups.	LOTS L3 (Apply)

*Revised Bloom's Taxonomy Action verbs/Level

LIST OF EXPERIMENTS:

1. To conduct starting and reversing the direction of rotation for 1-Phase and 3-Phase induction motor.
2. To conduct the load test to determine the performance characteristics of three phase induction motor.
3. To perform Load test on a 3-phase induction motor & DC generator set and to determine the efficiency of induction motor.
4. To perform light running and block rotor test to determine the parameters of the equivalent circuit of single phase induction motor.
5. To perform the open circuit test and block rotor test on three phase induction motor, draw the circle diagram and find out the rotor resistance.
6. To calculate the voltage regulation of three phase alternator by using synchronous impedance method:-
    a. Conduct open and short circuit test.
    b. Determine and plot variation of synchronous impedance with field current.
    c. Determine synchronous reactance.
    d. Determine voltage regulation for lagging, leading and unity power factors.
7. To plot the V-Curves of a synchronous machine.
    a. Determination of Zero Sequence reactance of a synchronous machine.
    b. Measurement of direct and quadrature axis reactance.
8. To measure negative sequence reactance of synchronous machine.
9. To calculate voltage regulation of synchronous machine by Zero Power Factor method.
10. To study the parallel operation of synchronous generators for load sharing.
11. To perform the synchronization for the parallel operations of alternators.

NOTE: At least eight experiments are to be performed in the semester, out of which at-least six experiments should be performed from above list. Remaining experiments may either be performed from the above list or designed & set by the concerned institution as per the scope of the syllabus.

CO5.	**Organize** reports based on experiments performed with effective demonstration and analysis of results.	**HOTS L4 (Analyzing)**
CO6.	**Inculcate** ethical practices while performing experiments individually and in groups.	**LOTS L3 (Applying)**

*Revised Bloom's Taxonomy Action verbs/Level

LIST OF EXPERIMENTS:

1. To draw and illustrate single line diagram of distribution system of nearby area.
2. To study the operation of short, medium and long transmission line.
3. To plot power angle characteristics of transmission line.
4. To find ABCD Parameters of a model of loaded transmission line.
5. To find efficiency and voltage regulation of transmission line
6. To observe Ferranti effect in a model of transmission line.
7. To determine positive, negative and zero sequence impedances of a 3 winding transformer.
8. To determine sequence impedances of a cylindrical rotor Synchronous Machine.
9. To measure the dielectric strength of transformer oil.
10. To study and compare different types of power cables and methods of laying underground cables
11. To Study different types of Insulators and find string efficiency of string insulator:
    a. Without guard ring
    b. With guard ring.
12. To locate cable fault using cable fault locator.
13. To Study the performance of wind turbine generator system under variable load, wind speed and pitch angle.

NOTE: At least eight experiments are to be performed in the semester, out of which at-least six experiments should be performed from above list. Remaining experiments may either be performed from the above list or designed & set by the concerned course coordinator as per the scope of the syllabus.

ESSENCE OF INDIAN TRADITIONAL KNOWLEDGE

General Course Information:

Course Code: **MC/4-T** Course Credits: 0.0 Mode: Lecture (L) Type: Program Core Teaching Schedule L T P: 3 0 0 Examination Duration: 3 hours	**Course Assessment Methods; Max. Marks: 100 (Internal: 30; External: 70)** Three minor tests, each of 20 marks, will be conducted. The third minor will be conducted in open book mode by the Course Coordinator. No date sheet will be issued for the third minor at the level of the Departments. For the purpose of internal assessment, the average of the highest marks obtained by a student in any two minor examinations will be considered. All the minor examination question papers will be prepared and evaluated by following the Outcome Based Education framework. Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks). The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

About the Course and its Outcomes:

This course is designed to acquaint the students with Indian Knowledge traditions. It introduces the students to Vedic Period, Post-Vedic period, Sufi and Bhakti Movement in India and social reform movements of 19th Century.

Course outcomes:

Sr.No.	Course Outcomes At the end of the semester, students will be able to:	RBT* Level
CO 1	Recognize the forms and sources of Indian Traditional Knowledge	**L1 (Remembering)**
CO 2	Identify the contribution of great ancient Indian Scientists and spiritual leaders to the World of Knowledge	**L2 (Understanding)**
CO 3	Apply the reasoning based on the objectivity and contextual knowledge to address the social and cultural issues prevalent in the Indian Society.	**L3 (Applying)**
CO 4	Differentiate the myths, superstitions form the reality in context of traditional knowledge to protect the physical and social environment.	**L4(Analyzing)**
CO 5	Suggest means of creating just a fair and social environment that is free from any prejudices and intolerance for different opinions and cultures.	**L5 (Evaluating)**

Course Content

UNIT-I

Introduction to Indian Traditional Knowledge: Definition traditional knowledge, forms, resources and dissemination of traditional knowledge.

Vedic Period: Vedas and Upnishads, Yogsutras of Patanjali.

Post Vedic Period: Budhism, Jainism and Indian Materialism, Charvak Schools of Thoughts.

UNIT-II

Sufi and Bhakti Movement (14th to 17th Century): Sufi and Bhakti Movement (14th to 17th Century):सगुण-निगुण भक्ति, Sufism and Sufi Saints, Sant Kabir Ji, Guru Nanak Dev Ji and Guru Jambheshwar Ji Maharaj, composite cultural of Indian subcontinent.

UNIT- III

Jyotirao Phule and Savitri Bai Phule & Other 19th Century Social Reform Movements: India's Cultural Heritage.

UNIT-IV

India's Contribution to the World of Knowledge: प्राचीि भारत के महाि निज्ञानिक, बोधायि, चरक,कोमारभररत्य, जीिि,सुश्रुत, आयुभट्ट, बारहनमनहर,ब्रह्मगुप्त, िागाजुिि,िाग्भट्ट, Astrology and Astronomy, Myths and Realities. Astronomy, Myths and Realities.

A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Pre-Requisites: None

About the Course and its Outcomes:

The course is designed to develop the Holistic perspective based on self-exploration and co-existence in society and nature. The focus is on to understand the harmony and being in harmony with the society and the environment around us. The students will nurture a habit of self-reflection and courage to act. This course includes the practice sessions to discuss natural acceptance in human-being as the innate acceptance for living with the responsibility (living in relationship, harmony and co-existence) rather than an arbitrariness in choice based on liking-disliking).

Course outcomes:

Sr. No.	Course Outcomes **At the end of the semester, students will be able to:**
CO 1	Exhibit awareness about oneself, one's surroundings and goals in one's life.
CO 2	Stay in harmony with society and nature.
CO 3	Develop healthy and harmonious relationships.
CO 4	Understand groups and develop team spirit
CO 5	Manage stress effectively.
CO6	Exhibit leadership qualities.
CO7	Excel in Personal and Professional Life.

Course Content

UNIT-I

Understanding the Concept of self-exploration of self with JOHARI – Window. Self –Esteem, Characteristics of individuals with low and high Self- Esteem. Self Confidence, Strategies of BuildingSelf-Confidence.
Personality: Definition, Types and Traits; Relevance and importance of nature and nurture in the development of the personality.

UNIT-II

Nature of Socialization: Socialization process, contributing to the society and nation. Importance of discipline and hard work, Ecological responsibility of Engineers.
Professional Ethics: Competence in Professional values and ethics.
Personal and Professional Excellence: Identifying long-term choices and goals.

UNIT- III

Meaning and nature of teams, External and internal factors affecting team building.Leadership Meaning, Nature and Functions, leadership styles in organization.
Meaning and nature of stress, causes, effects and management.

UNIT-IV

Meaning and importance of human rights, Human rights awareness.
Harmony in nature, understanding co-existence, harmony at all levels of existence.
Understanding the concept of happiness and well – being. Role and importance of positive emotions: Gratitude, hope and optimism.

Detailed Syllabus

of

B.Tech. (EE)

III Yr. (V & VI Sem)

Program Specific Outcomes (PSOs)

Sr. No.	Program Specific Outcomes
PSO1	Ability to utilize logical and technical skills to model, simulate and analyse electrical components and systems.
PSO2	Empowering to provide socially acceptable technical solutions to real time electrical engineering problems with the application of modern and appropriate techniques for sustainable development.
PSO3	Graduates will demonstrate their knowledge in effective implementation during their practice of profession of Electrical Engineering with due regard to environment and social concerns.

*Programme Outcomes (POs) of Bachelor Programmes in Engineering and Technology have been specified in First year common curriculum of B.Tech. Programmes.

Course Code	Definition/ Category
BSC	Basic Science Courses
ESC	Engineering Science Courses
HSMC	Humanities and Social Sciences including Management Courses
MC	Mandatory Courses
PC	Program Core
PE	Program Elective Courses
OE	Open Elective Courses
EEC	Employability Enhancement Courses (Project work/ Summer Training/ Industrial Training/ Practical Training/ Internship/Seminar, etc.)

Credit Scheme for B.Tech.(Electrical Engg.) III Year (V & VI Sem)

Semester	Basic Science Courses (BSC)		Program Core/ Program Elective/ Open Elective Courses (PC/PE/OE)		Humanities, Social Sciences Courses (HSMC)		Mandatory Courses (MC)		Grand Total Credit

ADVANCED POWER ELECTRONICS AND DRIVE

General Course Information:

Course Code: **PC/EE/51-T** Course Credits: 3.0 Mode: Lecture: (L) Type: Program Core Teaching Schedule L T P: 3 0 0 Examination Duration: 3 hours	**Course Assessment Methods; Max. Marks: 100 (Internal: 30; External: 70)** Three minor tests, each of 20 marks, will be conducted. The third minor will be conducted in open book mode by the Course Coordinator. No date sheet will be issued for the third minor at the level of the Departments. For the purpose of internal assessment, the average of the highest marks obtained by a student in any two minor examinations will be considered. All the minor examination question papers will be prepared and evaluated by following the Outcome Based Education framework. Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks). The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Indicate the fundamental of electronics devices and circuit	**L1(Remembering)**
CO2.	Derive the basic operation and compare performance of various power converters circuits	**L2(Understanding)**
CO3.	Demonstrate the power converter circuits design and learn to select suitable power electronic devices by assessing the requirements of application fields.	**L3(Apply)**
CO4.	Compare, formulate and analyze a power electronic circuit design and control drive performance.	**L4(Analysis)**
CO5.	Evaluate the critical areas in application levels and derive typical alternative solutions, select suitable power converters to control Electrical Motors and other industry grade apparatus.	**L5(Evaluating)**
CO6.	Create the model on the applications basis of the controller	**L6(Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

DC to DC converter: Classification of choppers, Principle of step-down and step-up chopper, Control strategies: Time ratio control (Pulse Width Modulation &Frequency Modulation scheme) and Current-Limit control, output voltage control techniques, one, two, and four quadrant choppers. **Thyristor chopper circuits:** Forced commutation (Voltage commutated & current commutated chopper) and load commutated chopper
Switching mode Regulators: Buck, Boost, Buck-Boost, Cuk regulators

UNIT- II

Electrical Drives: Definition, block diagram, parts of electrical drives (electrical motors & power modulators), types of electrical drives, advantages of electrical drives, choice of electrical drives, **Dynamics of electrical drives:** Fundamental torque equation, speed-torque conventions, multi-quadrant operation of electrical drives, classification of load torques. Steady state load torque-speed curves, closed loop control of drives, Duty Cycles, Selection of Rating of Electrical Motor, Electrical Braking of Machines, Rotor Energy Loss of Cage Induction Motors: During Acceleration, Stop and Reversal of Speed, Time taken during acceleration

UNIT- III

Converter Fed DC Drives: Single-phase half controlled and fully controlled converter fed dc motor drives, operation of different dc drives- separately excited, shunt, series and compound, universal, permanent magnet, dc servo motors with continuous armature current, voltage and current waveforms.

Chopper fed DC Drives: Principle of operation and control techniques, chopper circuit configurations used in dc drives: Type A, B, C, D and E; Motoring operation of chopper fed separately excited dc motor,

UNIT- IV

AC Drives: Three phase induction motor drives, Starting (Star-Delta starter, Auto transformer starter & Rotor-resistance starter) Rheostatic, Plugging & Regenerative braking, Constant torque mode and constant power mode operation,

Speed control of three-phase induction motor drives: Voltage and Frequency Controlled Induction Motor Drive,Static rotor resistance control, space vector theory, conventional space vector modulation; constant V/f control of induction motor.**Slip power recovery schemes**: Static Kramer Drive & Static Scherbius drive.

Course Outcomes

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Memorize the basics of electric circuits and signal flow.	**L1(Remembering)**
CO2.	Describe the performance of different types of control systems and explain the stability by different methods on the basis of their transfer function.	**L2(Understanding)**
CO3.	Solve the problems related with different control system design and can illustrate briefly.	**L3(Apply)**
CO4.	Compare the performance characteristics of different control systems and examine the behavior of system.	**H1(Analysis)**
CO5.	Judge the control strategy on the basis of their performance.	**H2 (Evaluating)**
CO6.	Develop new controller and compensator on the basis of outcomes and requirement of system.	**H3 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Level

Course Content

UNIT-I
Introduction to Control System

Introduction to Control Systems: Open & Closed loop, Control System classification, Transfer function analysis, concept of poles and zeros, Force-Voltage and Force-Current Analogy, Mathematical modelling of electrical and mechanical systems, hydraulic, pneumatic systems.

Description of Control System Components: Error detectors, gears, gyroscope, DC motors, servomotors, techo-generators, servo amplifiers, synchros; block diagram and reduction techniques, signal flow graphs, mason's gain formulae, performance of feedback Systems.

Time Response Analysis (Transient, Steady State and Stability Analysis)
Transient Response Analysis: Standard test signals, time response of first order systems, characteristic equation of feedback control systems, transient response of second order systems, time domain specifications, steady state response, steady state errors and error constants, Proportional, Integral, Derivative systems.
Root Locus Analysis: Development of root loci, root motions under close-looping, effects of pole/zero on loci, Case study- Speed Control of DC Motor using PID.

UNIT-III
Frequency Response Analysis
Stability Analysis: Stability, Routh-Hurwitz stability criterion, relative stability and frequency-domain specifications analysis using Bode plots, Gain margin and phase margin, Nyquist plot (Polar Plot), Use of Nyquist stability criterion for stability analysis, Case study- DC Motor Control.

UNIT-IV
Classical Control Design Techniques
Compensator Design: Feedback compensation –Lead, Lag compensation, Compensator design using Root locus, Compensator design using Bode Plot
Controller Design: Specifications of time-domain and frequency domain and interrelation between them, design of P, PD, PI, PID error control strategies, impact on transient response and steady-state response.

CO 1	Describe the evolution of processor architectures.	L1
CO 2	Explain the concepts of 8085 and 8086 microprocessor with their programming.	L2
CO 3	Write simple programs in assembly language of 8085and8086 microprocessor	L3
CO 4	Appraise Microprocessors and Microcontrollers for different interfacing applications for various application	L5
CO 5	Develop the microprocessor and Microcontroller based Embedded System.	L6

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Introduction: Introduction to Microprocessor & Microcontrollers Architectures: Harvard vs. Von Neumann, CISC vs. RISC, Brief history of microprocessors and microcontrollers.
8085 microprocessor architecture, Timing and control unit, Machine cycles, Addressing modes, Instruction set, Assembly language programming, program for multibyte addition/subtraction, multiplication, division, block transfer, Interrupts in 8085.

UNIT- II
Microprocessor 8086: Block diagram of 8086, details of sub-blocks such as EU, BIU; memory segmentation and physical address computations, addressing modes, instruction formats, pin diagram, data transfer instructions, arithmetic instructions, branch instructions, looping instructions, NOP and HLT instructions, flag manipulation instructions, logical instructions, shift and rotate instructions,

UNIT- III

Interfacing Device: Basic principles of interfacing memory and I /O devices, Data transfer techniques

DMA: Introduction to DMA process, 8237 DMA controller, 8255 PPI chip: Architecture, control words, modes, Interrupt and Timer: 8259 Programmable interrupt controller, Programmable interval timer chips,

UNIT- IV

Microcontroller8051: Introduction to 8051 Microcontroller: 8051 architecture and pin diagram, Introduction and History of microcontrollers, Block Diagram of 8051, Interrupts in 8051, Registers, Timers, Counters, Flags, Special Function Registers, Addressing Modes, Data types, Serial communication.

CO3.	Use different type of conducting materials for power generation.	**L3(Apply)**
CO4.	Compare the different type of electrical components and materials.	**L4(Analysis)**
CO5.	Appraise the use of electrical materials in the field of power generation.	**L5(Evaluating)**
CO6.	Formulate agood material to remove the limitation related to the power generation	**L6(Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Dielectrics: Definitions. Multipole development, Electrical dipole, General properties of dielectrics, Fundamental equation of dielectrics, Dielectric sphere, Energy and forces acting on the dielectrics. Polarization mechanisms in dielectrics: induced, orientation, electronic, ionic, and interfacial and lattice polarizations; combined mechanisms, Dielectric losses.

UNIT-II

Magneticmaterials Classification of material-Dia, Para, and Ferro-magnetic materials and applications

Magnetic Properties of materials: Magnetic dipole moment of current loop. Magnetization from a macroscopic viewpoint. Orbital magnetic dipole moment and angular momentum of two simple atomic models. Lenz's law and induced dipole moments. Classification of magnetic materials.

UNIT-III

Conducting materials: Types of Conducting Materials, Low Resistivity Materials, and High Resistivity Materials Contact Materials, Fusible (or Fuse) Materials, Filament Materials, Carbon as Filamentary and Brush Material.
Conductors, Cables, and Wires: Types and Materials, Solder Materials for Joining Wires and Joints in Power Apparatuses, Sheathing Materials, Sealing Materials

UNIT-IV

Insulating materials: Gaseous materials-Oxide gases, electronegative gases, hydrocarbon gases; Liquid materials-mineral oils, silicon liquids, hydrocarbon liquids; Solid materials-Paper and boards, Resins (Polymers), Rubbers-natural and synthetic, glass, ceramics, asbestos.

ADVANCED POWER ELECTRONICS & DRIVES LABORATORY

General Course Information:

Course Code: **PC/EE/51-P** Course Credits: 1 Mode: Practical Type: Program Core Contact Hours: 2 hours per week. .	**Course Assessment Methods (Internal: 50; External: 50)** Internal continuous assessment of 50 marks by course coordinator as per the course assessment method (Annexure I). For the end semester practical examination the assessment will be done out of 50 marks by the external and internal examiners as per the course assessment method (Annexure I).

Course Outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	**Experimental** work and acquire technical knowledge to solve out the problems of various power converters (Chopper) and their use in electric drives control methods.	**HOTS L4 (Analyzing)**
CO2.	**Interpret** the performance characteristics of the DC-DC converter in the field of electrical drive.	**LOTS L3 (Applying)**
CO3.	**Calculate** the suitability of power converter applications and compare the experimental observations in comparison to theory.	**HOTS L5 (Evaluating)**
CO4.	**Appraise** single phase and three phase converters for electric drive applications in industries.	**HOTS L5 (Evaluating)**
CO5.	**Organize** reports based on experiments performed with effective demonstration and analysis of results.	**HOTS L4 (Analyzing)**
CO6.	**Inculcate** ethical practices while performing experiments individually and in groups.	**LOTS L3 (Applying)**

*Revised Bloom's Taxonomy Action verbs/Level

LIST OF EXPERIMENTS:

1. To perform electrical braking on a DC shunt motor and discuss the results of various types of electrical braking.
2. To perform speed control on a DC motor using single-phase half and fully controlled bridge converter.
3. To study the variable frequency control of three phase induction motor and plot variation of speed and input power with frequency for constant voltage and constant (voltage/frequency) modes.
4. To perform speed control operation on single phase induction motor using TRIAC.
5. To study the Thyristor controlled D.C drive.
6. To study the performance of chopper fed DC motor drives.
7. To perform speed control operation on single-phase induction motor using a single-phase AC voltage regulator.
8. To perform speed control on a DC motor using three-phase half-controlled bridge converters.
9. To perform speed control on a DC motor using a single-phase dual converter.
10. To perform speed control on a DC motor using three-phase fully controlled bridge converters.
11. To study and perform electrical braking of a three-phase induction motor.
12. To perform speed control of a separately excited dc motor using chopper.
13. To study the performance of a VSI fed induction motor drive.
14. To study the performance of a CSI fed induction motor drive.
15. To study a permanent magnet synchronous motor drive fed by a PWM inverter.
16. To study regenerative/ dynamic braking operation for AC motor study using software.
17. To study PC/PLC based AC/DC motor control operation.

NOTE: At least eight experiments are to be performed in the semester, out of which at-least six experiments should be performed from the above list. Remaining experiments may either be performed from the above list or designed & set by the concerned course coordinator as per the scope of the syllabus.

CONTROL SYSTEMS-I LABORATORY

General Course Information:

Course Code: **PC/EE/52-P** Course Credits: 1 Mode: Practical Type: Program Core Contact Hours: 2 hours per week. .	**Course Assessment Methods (Internal: 50; External: 50)** Internal continuous assessment of 50 marks by course coordinator as per the course assessment method (Annexure I). For the end semester practical examination, the assessment will be done out of 50 marks by the external and internal examiners as per the course assessment method (Annexure I).

Course Outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	**Perform** experiments to examine the performance of control system models with their transfer function.	**HOTS L4 (Analyzing)**
CO2.	**Examine** the behaviours and performance characteristics of control system models at different parameters practically and simulation with MATLAB.	**HOTS L4 (Analyzing)**
CO3.	**Determine** the frequency response, transfer function and the Operational Characteristics of the various devices used in control applications.	**HOTS L2 (Evaluating)**
CO4.	**Design** models for various engineering applications to achieve the desired efficiency of the system.	**HOTS L6 (Creating)**
CO5.	**Organize** reports based on experiments performed with effective demonstration and analysis of results.	**HOTS L4 (Analyzing)**
CO6.	**Inculcate** ethical practices while performing experiments individually and in groups.	**LOTS Level 3 (Applying)**

*Revised Bloom's Taxonomy Action verbs/Level

LIST OF EXPERIMENTS:

1. To perform the time domain analysis of a first and second order system when subjected to unit step input.
2. To analyze the Error Detector Characteristics and Control Applications of the following:
   (i) LVDT, (ii) Potentiometer
3. To study the characteristics (using DIGIAC 1750) of (i) Voltage to Current Converter, (ii) Current to Voltage Converter, (iii) Voltage to Frequency Converter, (iv) Frequency to Voltage Converter.
4. To obtain the Frequency Response Characteristics and Design of Compensator for a given system.
5. To plot torque speed characteristics of the DC Servo Motor.
6. To obtain the Position Control performance of DC Servo Motor.
7. Simulation of PI, PD and PID controller using MATLAB software
8. To study the performance of P, PI, PID/Relay controllers used to control the temperature of an oven.
9. To obtain the Operational Characteristics for the Control Application of the following devices.
   (i) Stepper Motor, (ii) Temperature Detectors (Thermistor, Thermocouple etc.)
10. To find the performance of open loop and closed loop system using MATLAB.
11. To plot the torque speed characteristics of AC Servo Motor.
12. To analyze frequency response of a system by plotting Root locus using MATLAB software.
13. To analyze frequency response of a system by plotting Bode plot using MATLAB software.
14. To analyze frequency response of a system by plotting Polar plot using MATLAB software

NOTE: At least eight experiments are to be performed in the semester, out of which at-least six experiments should be performed from the above list. Remaining experiments may either be performed from the above list or designed & set by the concerned course coordinator as per the scope of the syllabus.

MICROPROCESSORSAND MICROCONTROLLERS LABORATORY

General Course Information:

Course Code: **PC/EE/53-P** Course Credits: 1 Mode: Practical Type: Program Core Contact Hours: 2 hours per week.	**Course Assessment Methods (Internal: 50; External: 50)** Internal continuous assessment of 50 marks based on class performance and attendance in practical classes (Annexure I). For the end semester practical examination, the assessment will be done out of 50 marks by the external and internal examiners (Annexure I).

Course Outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	**Perform** experiment to examine the application of 8085 and 8086 microprocessor with their programming.	**HOTS L4 (Analyzing)**
CO2.	**Evaluate** Microprocessors and Microcontrollers for different interfacing applications.	**HOTS L4 (Analyzing)**
CO3.	**Compare**the performance of Microprocessors and Microcontrollers for implementation in different electrical system.	**HOTS L5 (Evaluating)**
CO4.	**Design** the microprocessor and Microcontroller based Embedded System.	**HOTS L6 (Creating)**
CO5.	**Organize** and illustrate reports based on experiments performed with effective demonstration and analysis of results.	**HOTS L4 (Analyzing)**
CO6.	**Inculcate** ethical practices while performing experiments individually and in groups.	**(LOTSL3 Applying)**

*Revised Bloom's Taxonomy Action verbs/Level

LIST OF EXPERIMENTS:

1. Write and implement on 8085 kit, the program of multiplication of two 8 bit numbers.
    (a) Using bit wise multiplication method.
    (b) Using repetitive addition method.
2. To interface stepper motor and run clockwise and anti-clockwise at various speeds using 8085μP.
3. To generate square wave, saw tooth wave, triangular wave of 1 kHz frequency and 50% duty cycle using 8085 μP kit.
4. Write and implement 8085 μP Programme for
    (a) Factorial of a given number
    (b) Finding number of 1's in a given data stored in 2050H.
5. Write and implement a program on 8086 μP kit, the program for addition, subtraction of hexadecimal numbers.
6. To display SUPERAB on the LCD display of kit and operate the buzzer on/off at various duty cycle using 8086 μP To generate a square wave of 1 kHz frequency using
    (a) 8085-8253 interface
    (b) Timer of 8051
7. To display SUPERAB on the LCD display of kit and operate the buzzer on/off at various duty cycle using 8086 μP.
8. To study up/down 4- digit counter in decimal mode.
9. To display your name on the LCD display of kit and operate the buzzer on/off at various duty cycle using 8051 microcontroller.
10. To operate stepper motor in clockwise and anti-clockwise direction at various speeds using 8051 microcontroller.
11. To interface an A/D converter with 8085 microprocessor and store ten conversions in memory.

NOTE: At least eight experiments are to be performed in the semester, out of which at-least six experiments should be performed from above list. Remaining experiments may either be performed from the above list or designed & set by the concerned institution as per the scope of the syllabus.

FUNDAMENTALS OF MANAGEMENT FOR ENGINEERS

General Course Information

Course Code: HSMC/3-T Course Credits: 2 Type: Humanities and Social Sciences including Management Contact Hours: 2 hours/week Mode: Lecture (L) Examination Duration: 3 hours	**Course Assessment Methods (internal: 30; external: 70)** Three minor tests each of 20 marks will be conducted. The average of the highest marks obtained by a student in the any of the two minor examinations will be considered. Class Performance will be measured through percentage of lectures attended (04 marks). Assignments, quiz etc. will have weightage of 06 marks For the end semester examination, nine questions are to be set by the examiner. A candidate is required to attempt 5 questions in all. All questions carry equal marks. Question number 1 will be compulsory and based on the entire syllabus. It will contain seven parts of 2 marks each. Question numbers 2 to 9 will be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt the remaining four questions by selecting one question from each of the four units.

Pre-requisites: None

About the Course:

Fundamentals of Management for Engineers is a necessary course for B. Tech. (CSE) graduates wishing to work with organizations in their near future. It helps them acquiring managerial, planning and decision-making skills. This course makes students ready to work in teams as well as play leadership roles.

Course Outcomes: By the end of the course students will be able to:
CO1. **Define** fundamental concepts of management (LOTS: Level 1: Remember)
CO2. **Explain** the basic principles of management related to planning and decision making, HRM and motivation, and leadership. (LOTS: Level 2: Understand)
CO3. **Apply** the managerial skills to solve real world management problems. (LOTS: Level 3: Apply)
CO4. **Identify** leadership roles in various scenarios. (LOTS: Level 4: Analyse)
CO5. **Evaluate** a business model based on principles of management. (LOTS: Level 5: Evaluate)
CO6. **Prepare** a plan for a start up in IT sector. (LOTS: Level 6: Create)

Course

Contents

Unit I
Management Definition: Scope and process of management, Managerial Roles, Levels of Management, Managerial Skills, Challenges of Management, Evolution of Management, Scientific and Administrative Management, The Behavioural approach, The Quantitative approach, The Systems Approach, Contingency Approach, IT Approach.

Unit II
Planning and Decision Making: General Framework for Planning, Planning Process, Types of plans, Management by objectives, Development of business strategy.
Decision making and Problem Solving: Programmed and Non-Programmed Decisions, Steps in Problem Solving and Decision Making, Bounded Rationality and Influences on

Decision Making, Group Problem Solving and Decision Making, Creativity and Innovation in Managerial Work.

Unit III

Organization HRM and Controls: Organizational Design & Organizational Structures, Delegation, Empowerment, Centralization, Decentralization, Organizational culture, Organizational climate and Organizational change, Talent management, Talent management Models and strategic human Resource planning; Recruitment and selection; Training and development, Performance Appraisal. Types of controls and controlling Techniques.

Unit IV

Leading and Motivation: Leadership, Power and authority, Leadership styles; Behavioural leadership, Situational leadership, Leadership skills, Leader as mentor and coach, Leadership during adversity and crisis; Handling employee and customer complaints, Team leadership. Motivation: Types of motivation, Relationship between motivation, performance and engagement, Content motivational theories.

Industrial Training/ Internship-I

Course Code: **EEC/EE/51-P** Course Credits: 2 Type: Employability Enhancement Courses Mode: Practical Contact Hours: 04 hours	**Course Assessment Method: (Internal:100)** Assessment of Industrial Training/ Internship-I will be based on presentation/seminar, viva-voce, report and certificate for the practical training taken at the end of 4th semester.

Course Outcomes:

Sr. No.	Course Outcomes At the end of the semester, students will be able to:	RBT Level
CO 1	Outline technical documents and give oral presentations related to the work completed.	L1
CO 2	Prepared to engage in independent and lifelong learning in the industry.	L2
CO 3	Acquire and apply fundamental principles of engineering for working in and actual working environment.	L3
CO 4	Analyze practical application of the subjects taught during the program.	L4
CO 5	Develop, social, cultural, global and environmental responsibilities as an engineer.	L5
CO6	Design and implement solution methodologies with technical &managerial skills for solving engineering problems.	L6

Detailed Syllabus

of

B. Tech. (EE)

VI Semester

POWER SYSTEMS - II

General Course Information:

	Course Assessment Methods; Max. Marks: 100 (Internal: 30; External: 70)
Course Code: **PC/EE/61-T**	Three minor tests, each of 20 marks, will be conducted. The third minor will be conducted in open book mode by the Course Coordinator. No date sheet will be issued for the third minor at the level of the Departments. For the purpose of internal assessment, the average of the highest marks obtained by a student in any two minor examinations will be considered. All the minor examination question papers will be prepared and evaluated by following the Outcome Based Education framework. Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks).
Course Credits: 3.0	
Mode: Lecture (L)	
Type: Program Core	
Teaching Schedule L T P: 3 0 0	
Examination Duration: 3 hours	
	The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	List and describe the construction, principle and working of different types of switchgear equipmentsalong with protective schemes.	**L1(Remembering)**
CO2.	Classify the circuit breakers, relays and protective schemes based on construction, principle of operation and requirement.	**L2(Understanding)**
CO3.	Deploy an appropriate switchgear and protective scheme for various components of power systems to protect against different types of faults.	**L3(Applying)**
CO4.	Analyze the causes and counter measures of over-voltages in power systems.	**L4(Analyzing)**
CO5.	Appraise the power systems with neutral grounding and various grounding Schemes.	**L5(Evaluating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content
UNIT- I

Circuit breakers: Theory of arc formation and its extinction (AC and DC), Re-striking and recovery voltages, Current chopping, Capacitance and resistance switching, Types of circuit breakers: Air blast, Air-break, Oil, Vacuum and SF_6, comparative merits and demerits, HVDC circuit breaker system, Testing of Circuit breakers, Rating and selection of Circuit breakers

UNIT- II

Protective Relays: Requirement of Protective Relaying, Zones of protection, primary and backup protection, Essential qualities of Protective Relaying, Classification of Protective

Relays: Electromechanical - Electromagnetic, Attraction and induction type relays, Thermal relay, Gas actuated relay, Static and Numerical relays, Microprocessor based relays

Protective Schemes: Over current relaying: Instantaneous, time delayed, definite time, inverse time, IDMT relays and relay coordination, Differential relays: circulating current and voltage balance differential relays, Biased percentage differential relays, Directional over current and directional power relays, Distance relays

UNIT- III

Power Apparatus and lines Protection:

Generator protection: faults in Generators, stator and rotor protection, Motor Protection: Protection against overload, unbalance, single phasing, under voltage and reverse phase, Loss of synchronism

Transformer protection: Faults in transformers, differential, over current and earth fault protection, Bucholz relay, Harmonic restraint relay, over flux protection

Protection of feeders: Differential pilot protection, Merz price protection, Translay systemProtection of Lines: Over Current, Carrier Current and Three-zone distance relay protection using impedance relays

. UNIT- IV

Over voltages in power systems: Power frequency over voltages-Switching over voltages, causes of over voltages, Protection against over voltages, surge arrestors, Wave propagation in transmission lines and cables, transmitted and reflected waves, Surge impedance

Neutral Grounding: Grounded and Ungrounded neutral Systems, Effects of Ungrounded neutral on system performance, Methods of Neutral Grounding: Solid, Resistance, Reactance, Arcing Grounds and Grounding practices

Course Content

UNIT- I

Measurements: Method of measurement, Measurement system, Classification of instruments, Definition of accuracy, Precision, Resolution, Speed of response, Error in measurement, Classification of errors, loading effect due to shunt and series connected instruments.

Analog meters: General features, Construction, Principle of operation and torque equation of Moving coil, Moving iron, Electrodynamometer, Induction type instruments. Principle of operation of the Electrostatic, Thermoelectric, Rectifier type instruments, Extension of instrument ranges and multiplier, errors in the meters.

UNIT-II

Instrument transformer: Disadvantage of shunt and multipliers, Advantage of Instrument transformers, Principle of operation of current & potential transformer, errors.

Measurement of Power: Principle of operation of Electrodynamic & Induction type Wattmeter. Wattmeter errors. Energy Meters and its types alongwith their operation.

Measurement of resistance: Methods for the measurement of medium, low and high resistances, Megger.

UNIT-III

Measurement of Energy: Construction, theory and application of AC energy meter, testing of energy meters.

Potentiometer: Principle of operation and application of Crompton's DC potentiometer, Polar and Co-ordinate type AC potentiometer and application.

AC Bridges: Measurement of Inductance (self and mutual), Capacitance and frequency by AC bridges.

UNIT-IV

Cathode ray oscilloscope (CRO): Measurement of voltage, current, frequency & phase by oscilloscope. Frequency limitation of CRO. Sampling and storage oscilloscope, Double beam CRO.

Electronic Instruments: Advantages of digital meter over analog meters, Digital voltmeter, Resolution and sensitivity of digital meters, Digital multimeter, Digital frequency meter, Signal generator.

Sensors & Transducers: Introduction to sensors & Transducers, Strain gauge, LVDT, Temperature transducers, Pressure Measurement, Flow measurement using magnetic flow measurement, Liquid Level Measurement, Humidity Measurement, Torque Measurement, Velocity Measurement etc.

CONTROL SYSTEMS-II

General Course Information:

Course Code: **PC/EE/63-T** Course Credits: 3.0 Mode: Lecture (L) Type: Program Core Teaching Schedule L T P: 3 0 0 Examination Duration: 3 hours	**Course Assessment Methods; Max. Marks: 100 (Internal: 30; External: 70)** Three minor tests, each of 20 marks, will be conducted. The third minor will be conducted in open book mode by the Course Coordinator. No date sheet will be issued for the third minor at the level of the Departments. For the purpose of internal assessment, the average of the highest marks obtained by a student in any two minor examinations will be considered. All the minor examination question papers will be prepared and evaluated by following the Outcome Based Education framework. Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks). The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Prerequisites: PC/EE/63-T

Course Outcomes

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Describe the state of system and recall the z-transform along with stability theory.	**L1(Remembering)**
CO2.	Illustrate the performance of different control system models and controllers on the basis of their transfer function model.	**L2(Understanding)**
CO3.	Solve the problems related with linear and non-linear systems and give some examples.	**L3(Apply)**
CO4.	Compare the performance characteristics of different control systems and examine the behavior of system.	**H1(Analysis)**
CO5.	Judge the control strategy on the basis of their performance and requirement.	**H2 (Evaluating)**
CO6.	Design controller and compensator with optimum set of equations on the basis of outcomes and requirement of system.	**H3 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Level

Course Content

UNIT-I
State Variable Approach

State space equations in canonical forms, modelling of electrical and mechanical systems in state space form, solution of time invariant/variant continuous/ discrete time system state equations, state

transition matrix, state transformation, Eigen values and Eigen vectors, controllability and observability, State space representation of transfer function systems

UNIT-II
Discrete Data Systems

Introduction to digital control: The digital control problem and solution possibilities, Signal processing in digital control, principles of signal conversion, sampling and reconstruction, principles of discretization, impulse and step invariance, finite difference approximation, bilinear transformation.

Mathematical models of discrete-time systems: Transfer function and system response, stability in the z-plane and the Jury stability criterion, sampling and data reconstruction process, z-domain description of closed loop systems, systems with dead-time.

UNIT-III
Digital Control Design

Digital control design: Implementation of digital controllers, digital controllers for deadbeat performance, root locus methods and frequency domain methods, effect of nonlinearity in root locus and Nyquist plot.
Non-Linear Systems: Linear and Non-Linear Systems & comparison, Properties of Non-Linear Systems, Different types of non-linearities.

UNIT-IV
Non-Linear Systems

Introduction to nonlinear systems: Characteristics of nonlinear systems,inherent and intentional nonlinearities, qualitative behavior of linear Vs nonlinear systems, multiple equilibrium points, limit cycle, bifurcation, jump response, chaos,
Stability analysis of nonlinear systems: Describing function of common nonlinear functions and stability analysis, phase plane analysis, BIBO stability, construction of phase portraits, singular points, concept of stability in the sense of Lyapunov, asymptotic stability, local and global stability, Schur cohn stability, construction of Lyapunov function using Krasovskii and variable gradient method.

CO3.	**Evaluate** the operating characteristics of various types of relays.	**HOTS L5 (Evaluating)**
CO4.	**Design** a suitable protection scheme for different power system equipments.	**HOTS L6 (Creating)**
CO5.	**Organize** reports based on experiments performed with effective demonstration and analysis of results.	**HOTS L6 (Creating)**
CO6.	**Inculcate** ethical practices while performing experiments individually and in groups.	**LOTS L3 (Applying)**

*Revised Bloom's Taxonomy Action verbs/Level

LIST OF EXPERIMENTS:

1. To study construction and working of SF_6 and Vacuum circuit breakers.
2. To study construction and working of Air Blast circuit breakers.
3. To determine the time -current characteristics IDMT over-current relay (single phase).
4. To determine the operating characteristics of a percentage biased differential relay.
5. To implement the protection of transformer with percentage biased differential relay.
6. To study the construction and working of Buchholz relay.
7. To study microcontroller based over/under voltage relay.
8. To study operation of various Numerical relays and interfacing.
9. To realize the various Time-current characteristics of combined numerical over-current and earth fault relay.
10. To realize distance protection scheme on transmission line with a digital relay.
11. Realization and operation of parallel feeder protection.
12. To study the complete protection scheme for an alternator unit.
13. To visit the GIS Substation and analyse the working of various power system components.

NOTE: At least eight experiments are to be performed in the semester, out of which at-least six experiments should be performed from above list. Remaining experiments may either be performed from the above list or designed & set by the concerned institution as per the scope of the syllabus.

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	**Experimental** work and acquire basic technical knowledge to solve the measuring problems in the field of electrical engineering.	**HOTS L4** (Analyzing)
CO2.	**Interpret** the performance characteristics of different types of analog meters.	**LOTS L3** (Applying)
CO3.	**Select** the suitable instrument for measurement of various electrical quantities with different method.	**HOTS L5** (Evaluating)
CO4.	**Calibration** of measuring instruments for accurate measurement.	**HOTS L5** (Evaluating)
CO5.	**Organize** the basic requirements reports based on experiments in the electrical engineering fields for measurements of electrical parameters.	**HOTS L6** (Creating)
CO6.	**Inculcate** ethical practices while performing experiments individually and in groups.	**LOTS L3** (Applying)

*Revised Bloom's Taxonomy Action verbs/Level

LIST OF EXPERIMENTS:

1. To measure the displacement of fluid flow using LVDT.
2. To calibrate an energy meter with the help of a standard wattmeter & a stop watch
3. To measure the capacitance by De Sauty's bridge and unknown capacitance sharing bridge method.
4. To measure the frequency by using Wien's bridge
5. To measure the power with the help of Current Transformer & Potential Transformer.
6. To measure magnitude & phase angle of a voltage by rectangular type potentiometer.
7. To measure high resistance by loss of charge method.
8. To measure the low resistance by using Kelvin Double method, medium resistance by using Wheatstone bridge and high resistance by using loss of charge method.
9. To calibrate permanent magnet moving coil (PMMC) ammeter and permanent magnet moving coil (PMMC) voltmeter.
10. To test Dielectric oil using Hip Pot (H.T) testing Kit.
11. To test Current transformer using mutual Inductor Measurement of percentage ratio error and phase angle of given Current Transformer by Null method.
12. To test Potential transformers using mutual inductor Measurement of Percentage ratio error and phase angle error of the given Potential Transformer by Null method.
13. To study Digital Instruments such as: Digital Voltmeter, Digital Frequency Meter, Digital Panel Meter, Digital Storage Oscilloscope.

.

NOTE: At least eight experiments are to be performed in the semester, out of which at-least six experiments should be performed from above list. Remaining experiments may either be performed from the above list or designed & set by the concerned institution as per the scope of the syllabus.

*Revised Bloom's Taxonomy Action verbs/Level

LIST OF EXPERIMENTS:

1. To design a PID controller for position Control of DC motor and plot its output characteristics.
2. To observe and plot the various Relay characteristics.
3. To transform a given Transfer Function to State Space Model and vice-versa using MATLAB.
4. To plot the step response of the State Space Model using MATLAB.
5. To study the heating process and its control.
6. To design and simulate LTI models of Feedback Control System using MATLAB.
7. Simulation and analysis of State space models for continuous time systems using MATLAB.
8. Study of micro controller kit with ADC interfacing.
9. To implement PID control for industrial processes.
10. To obtain the response of a stepper motor controlled by a microcontroller by changing the number of steps, direction of rotation & speed
11. Study of Control of Inverted Pendulum using LAB VIEW.

NOTE: At least eight experiments are to be performed in the semester, out of which at-least six experiments should be performed from the above list. Remaining experiments may either be performed from the above list or designed & set by the concerned course coordinator as per the scope of the syllabus.

ECONOMICS FOR ENGINEERS

General Course Information

Course Code: HSMC/2-T Course Credits: 2 Type: Humanities and Social Sciences including Managementcourses Contact Hours: 2 hours/week Mode: Lectures (L) Examination Duration: 3 hours	**Course Assessment Methods (internal: 30; external: 70)** Three minor tests each of 20 marks will be conducted. The average of the highest marks obtained by a student in the any of the two minor examinations will be considered. Class Performance will be measured through percentage of lectures attended (04 marks). Assignments, quiz etc. will have weightage of 06 marks For the end semester examination, nine questions are to be set by the examiner. A candidate is required to attempt 5 questions in all. All questions carry equal marks. Question number 1 will be compulsory and based on the entire syllabus. It will contain seven parts of 2 marks each. Question numbers 2 to 9 will be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt the remaining four questions by selecting one question from each of the four units.

Pre-requisites: None

About the Course: This course is designed to provide the elementary and essential knowledge of economics relevant to their profession as engineers. The graduating engineers will learn aboutthe basic principles of economics and cost benefit analysis for various economic alternatives.The course also gives an initial exposure to issues and challenges for sustainable development.

Course Outcomes: By the end of the course students will be able to:
CO1. **outline** the principles of economics in general and economics in Indian context.(LOTS: Level 1:Remember)
CO2. **discuss** concepts related to economics in general and particularly relevant to Indianscenario. (LOTS:Level 2: Understand)
CO3. **apply** the principles of economics for solving problems related to Engineering sector. (LOTS: Level3: Apply)
CO4. **carry** out cost/benefit/, life cycle and breakeven analyses on one or more economic alternatives.(LOTS: Level 4: Analyse)
CO5. **judge** the issues and challenges of sustainable development. (LOTS: Level 5: Evaluate)

Course Content

Unit I

Definition of Economics- various definitions, Nature of economic problem, Production possibility curve, Economics laws and their nature. Relation between Science, Engineering, Technology and Economics. Concepts and measurement of utility, Law of Diminishing Marginal Utility, Law of equi-marginal utility - its practical applications and importance.

Unit II

Meaning of Demand, Individual and Market demand schedules, Law of demand, shape of demand curve, Elasticity of Demand, measurement of elasticity of demand, factors affecting elasticity of demand, practical importance and applications of the concept of elasticity of

demand.
Meaning of production and factors of production; Law of variable proportions, Returns to scale,Internal and External economics and diseconomies of scale.

Unit III

Various concepts of cost- Fixed cost, variable cost, average cost, marginal cost, money cost, real cost, opportunity cost. Shape of average cost, marginal cost, total cost etc. in short run and long run both.

Meaning of Market, Types of Market - Perfect Competition, Monopoly, Oligopoly, Monopolistic Competition(Main features of these markets)

Issues, Strategies and challenges for sustainable development for developing economies

Unit VI

Elements of Business/Managerial Economics and forms of organizations, Cost & Cost Control Techniques, Types of Costs, Lifecycle Costs, Budgets, Break Even Analysis, Capital Budgeting, Application of linear Programming. Investment Analysis- NPV, ROI, IRR, Payback Period, Depreciation, Time Value of Money (present and future worth of cash flows).

Business Forecasting- Elementary techniques. Statements- Cash Flows, Financial. Case Study Method. Nature and Characteristics of Indian Economy (brief and elementary introduction). Privatization - meaning, merits, and demerits. Globalisation of Indian economy- merits and demerits.WTO and TRIPs agreements.

It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	List and describe the various conventional and renewable energy resources and technologies	**L1 (Remembering)**
CO2.	Recognize the impact of renewable energy utilization on society and environment	**L2 (Understanding)**
CO3.	Interpret and apply the concepts of renewable energy sources for electricity generation and grid integration	**L3 (Applying)**
CO4.	Make comparisons among renewable energy resources and technologies	**L4(Analyzing)**
CO5.	Assess and select the options among renewable energy resources and technologies	**L5 (Evaluating)**
CO6.	Do the basic design of various renewable energy systems for different requirements	**L6 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content
UNIT-I

Introduction: Over view of conventional & renewable energy sources, Limitations of conventional energy sources, need & development of alternate energy sources, basic schemes and applications of direct energy conversion types of renewable energy systems, Future of Energy Use, Global and Indian Energy scenario, Potential of renewable energy sources, renewable electricity and key elements, Global climate change, CO2 reduction potential of renewable energy, concept of Hybrid systems. ENERGY STORAGE: Sizing and Necessity of Energy Storage.

UNIT-II

Solar and Wind Energy:
Solar radiation spectra, solar geometry, Earth Sun angles, observer Sun angles, solar day length, Estimation of solar energy availability, Photovoltaic effect, characteristics of photovoltaic cells, conversion efficiency, solar batteries and applications, Design of standalone PV system, Solar energy in India, solar collectors, solar furnaces & applications, Design of solar water heater,

History of wind power, wind generators, theory of wind power, wind speed statistics- probability distributions, wind speed and power- cumulative distribution functions characteristics of suitable wind power sites, scope in India, advantages and limitations.

UNIT-III

Thermo-electric and MHD Generators: Seeback effect, Peltier effect, Thomson effect, Thermo-electric convertors, Brief description of the construction of thermoelectric generators, Applications and economic aspects.

Hall Effect, Basic principles of MHD generator, Different types of MHD generators, Conversion effectiveness, Practical MHD generators, Applications and economic aspects.

UNIT-IV

Fuel Cells and Miscellaneous Sources: Principle of action, Gibbs free energy, general description of fuel cells, types, construction, operational characteristics and applications, Geo-thermal system, characteristics of geothermal resources, Low head hydro-plants, Network Integration Issues: Overview of grid code technical requirements, Power system interconnection experiences in the world

ELECTRICAL & HYBRID VEHICLES

General Course Information:

Course Code: **PE/EE/62-T** Course Credits: 3 Mode: Lecture (L) Type: Program Elective Teaching Schedule L T P: 3 0 0 Examination Duration: 03 hours.	**Course Assessment Methods; Max. Marks: 100 (Internal: 30; External: 70)** Three minor tests, each of 20 marks, will be conducted. The third minor will be conducted in open book mode by the Course Coordinator. No date sheet will be issued for the third minor at the level of the Departments. For the purpose of internal assessment, the average of the highest marks obtained by a student in any two minor examinations will be considered. All the minor examination question papers will be prepared and evaluated by following the Outcome Based Education framework. Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks). The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Understand the basic concept and history of EV and HEV	**L1 (Remembering)**
CO2.	Understand the models to describe hybrid vehicles and their performance.	**L2 (Understanding)**
CO3.	Analysis of different possible ways of energy storage.	**L3 (Applying)**
CO4.	Analysis of the different strategies related to energy management systems	**L4(Analyzing)**
CO5.	Study of design of Vehicle to grid technology.	**L6 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT-I

Introduction: History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern electric vehicles on energy supplies. Electric Vehicle Composition and Configurations, Basic concept of hybrid Electric vehicle, HEV configuration types – series, parallel, series-parallel and complex hybrid, Power flow control.

UNIT-II

Electric Propulsion: major requirements of EV motor drive, characteristics and control of DC motor, Induction motor, Switched Reluctance motor and Permanent Magnet motor, power converters devices/topology, control hardware, software and strategy vehicle, power source characterization, transmission characteristics.

UNIT-III

Energy Storage: Introduction to energy storage requirements in Hybrid and Electric Vehicles, Energy sources, Battery based energy storage and its analysis, Fuel fell based energy storage

and its analysis, super capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis.

UNIT-IV

Energy Management Strategies: Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies. Plug-in electric vehicles, Vehicle to grid (V2G) and Grid to vehicle (G2V) fundamentals

CO1.	Recall the knowledge about the reliability of network functions	**L1(Remembering)**
CO2.	Convert the mathematical driving point or transfer relations into realizable electrical circuits	**L2(Understanding)**
CO3.	Solve the numerical problem for system stability checking stability of the network function.	**L3(Apply)**
CO4.	Compare the different type of electrical components and materials.	**L4(Analysis)**
CO5.	To select the electrical circuit and filters in the field of engineering application.	**L5(Evaluating)**
CO6.	Convert the mathematical expression in the design form.	**L6(Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Fundamental Concepts: Energy considerations, positive real condition, Hurwitz polynomials, Bounded realness, scattering description of networks.

UNIT-II

Lossless one port network functions, Foster reactance functions and theorem, canonical forms: Cauer's and Foster's, Synthesis of lossless LC Immittance functions, Synthesis of lossy RL and RC functions, Certain RLC function realizations. Fundamentals of two port network synthesis.

UNIT-III

Passive Filter Design: Analysis and Design of Constant K and m-derived filters, Active Filter Design: Amplitude and phase functions, amplitude approximations, phase approximations,

simultaneous amplitude and phase approximations, Group delay response and equidistant linear phase approximations.

UNIT-IV

Maximally flat and Equi-ripple filters, Magnitude and frequency normalizations, frequency transformations; high Pass, Band-Pass, Band-stop filters, Impedance matching networks, Phase shift networks.

Course Outcomes

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Recall the mathematical formulation.	**L1(Remembering)**
CO2.	Illustrate the complexity of real life problems with stochastic modeling	**L2(Understanding)**
CO3.	Solve the real life problems with comprehensive solution.	**L3(Apply)**
CO4.	Compare the performance of different frameworks.	**H1(Analysis)**
CO5.	Judge and utilize the simulation model on the basis of their performance.	**H2 (Evaluating)**
CO6.	Formulate the solution of different problems in the field of research and development.	**H3 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Level

Course Content

UNIT-I
Review of Probability and Random Number generation, Generating continuous and discrete time random variables, Discussions on deterministic and stochastic modeling of engineering systems, Need for stochastic models, Ideas of model validation.

UNIT-II
Modeling of systems as discrete event systems (DES), Continuous time and discrete time Markov chains, Properties of DES (observability and controllability), Supervisory control of DES, Queuing models.

UNIT-III
Heuristic modeling, Neural, Fuzzy and Neuro-Fuzzy modeling and simulation of dynamical systems, Modeling of time delays and introduction to networked dynamical systems.

UNIT-IV

Dynamical system simulation, Monte Carlo simulations, generation of simulation data and its statistical analysis, Statistical validation techniques, Goodness of fit test χ^2, and others, Agent based simulation, Numerical issues in simulation of dynamical systems.

of

B.Tech. (EE)

IV Yr. (VII& VIII Sem)

Program Specific Outcomes (PSOs)

Sr. No.	Program Specific Outcomes
PSO1	Ability to utilize logical and technical skills to model, simulate and analyse electrical components and systems.
PSO2	Empowering to provide socially acceptable technical solutions to real time electrical engineering problems with the application of modern and appropriate techniques for sustainable development.
PSO3	Graduates will demonstrate their knowledge in effective implementation during their practice of profession of Electrical Engineering with due regard to environment and social concerns.

*Programme Outcomes (POs) of Bachelor Programmes in Engineering and Technology have been specified in First year common curriculum of B.Tech. Programmes.

Course Code	Definition/ Category
BSC	Basic Science Courses
ESC	Engineering Science Courses
HSMC	Humanities and Social Sciences including Management Courses
MC	Mandatory Courses
PC	Program Core
PE	Program Elective Courses
OE	Open Elective Courses
EEC	Employability Enhancement Courses (Project work/ Summer Training/ Industrial Training/ Practical Training/ Internship/Seminar, etc.)

* The students will have to prepare and submit a project report of the Industrial Training/ Internship of 6-8 weeks done during summer vacations after the examination of VI semester under the supervision of faculty during VII semester.

Important Notes:
1. Open Elective Course– III to be offered by departments other than Electrical Engineering.
2. The Minor Project should be initiated by the student in the beginning of VII semester and will be evaluated at the end of the semester on the basis of its implementation, presentation, delivered, viva-voce and report.
3. The Viva-Voce for Minor Project by External Examiner and Chairperson of the Department / Internal Examiner at the end of the semester.
4. Assessment of Practical Training-II will be based on presentation/seminar, viva-voce, report and certificate for the practical training taken at the end of 6th semester.
5. General Proficiency is a non-credit Mandatory Course and the student has to get pass marks in order to qualify for the award of the degree.
6. Students will be allowed to use non-programmable scientific calculator only, however sharing of calculator will not be permitted.

	TOTAL		**09/09**	**1/1**	**14/7**	**24/17**
					Total Credits	**17**

Important Notes:

1. The Major Project should be initiated by the student in continuation of the VII semester and will be evaluated at the end of the semester on the basis of its implementation, presentation, delivered, viva-voce and report.

2. The Viva-Voce for Major Project by External Examiner and Chairperson of the Department / Internal Examiner at the end of the semester.

3. General Proficiency is a non-credit Mandatory Course and the student has to get pass marks in order to qualify for the award of the degree.

4. Students will be allowed to use non-programmable scientific calculator only, however sharing of calculator will not be permitted.

Policy Document for providing exemptions in attendance to the B.Tech. students of the University for undertaking various internships/trainings during their final/penultimate semester

1.   Background:

It has been realized that the students pursuing B. Tech. programmes offered by the University/affiliated Institutes/Colleges are facing challenges as under:

1. Students selected in industry during their programme are asked to join the industry for internship/training of duration up to one semester.
2. The provision is not there in these programmes to allow the students to join the internship by way of getting the required attendance of semester from internship/training.
3. So, students are not able to join such internship/training consequential to two-fold loss:
   (a) Job opportunity.
   (b) Skill development in industry environment.

But, presently, in the B. Tech. Programmes run by the University, there is no provision for the students to join the industry for such internship/training of/for more than 6–8-week duration. To facilitate the students for joining longer duration internships/trainings, a need for framing a policy document was felt.

Keeping in view the above challenges/statutory position and to avoid hardship to students and to improve the employability of the students, Ch. Devi Lal University, Sirsa has framed a policy to accord exemptions in attendance to students undertaking various internships/trainings during their final/penultimate semester of the B. Tech. Programmes.

2.   Applicability of the policy with following Provisions:

The policy is applicable to the students studying in the final semester/ penultimate semester of B. Tech. programmes.

2.1   Provisions:

Student covered as per section title 'Applicability of the Policy' will be governed by the following provisions:

1. The student will be allowed to join the organization for internship/training in the final semester/ penultimate semester of the course for a period of up to one semester only if he/she must be passed/ cleared in all courses/subjects in all the semester examination whose results have been declared.
2. The student will earn his attendance from the organization during the period of internship.
3. Attendance will be certified by the organization, failing which student will be debarred from appearing in the University examinations of that semester.
4. The student will have to give an undertaking that he/she will appear in all the internal/external examination/practical as per requirements of the Programme and as per Schedule of the University examination for that programme. For this he/she will have to do the necessary preparation by himself/herself and Institute/department will not be responsible for the same.
5. If the student is selected in a company/industry/organization etc., and is asked to join the organization in the final semester/ penultimate semester for a period of upto one

semester; then formally constituted Internship Facilitation Committee (IFC) will examine and give its recommendation as deemed fit.

2.2   Composition of Internship Facilitation Committee (IFC):

The composition of IFC will be as under:

1. Dean, Faculty of Engg. & Tech./Director/ Principal (or Nominee) (Chairperson)
2. Chairperson/Head/ In-charge of the concerned Department/Branch (Member)
3. In-Charge Academic Branch/Academic In-charge of Institute (Member)
4. Senior most faculty of the department other than Chairperson/ Director/Head of the Department/Branch (Member)
5. Training and Placement officer/ In-Charge TPO of the Institute /College/Department   (Member Secretary)

Any offer by the organisations providing internship on demanding charges from a student will be discouraged by the Internship Facilitation Committee (IFC). Member Secretary of the IFC will schedule the meeting and maintain all the records.

3.   Conclusion:

The students can only be allowed to join the internship/training in company/ industry/ organization etc. with exemptions in attendance on the final recommendation of Internship Facilitation Committee (IFC) of the Institute / Department and permission given by the Department/Institute/College authority.

POWER SYSTEM OPERATION AND CONTROL

General Course Information:

Course Code: **PC/EE/71-T** Course Credits: 4.0 Mode: Lecture (L) Type: Program Core Teaching Schedule L T P: 3 1 0 Examination Duration: 3 hours	**Course Assessment Methods; Max. Marks: 100 (Internal: 30; External: 70)** Three minor tests, each of 20 marks, will be conducted. The third minor will be conducted in open book mode by the Course Coordinator. No date sheet will be issued for the third minor at the level of the Departments. For the purpose of internal assessment, the average of the highest marks obtained by a student in any two minor examinations will be considered. All the minor examination question papers will be prepared and evaluated by following the Outcome Based Education framework. Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks). The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Explain the operation and control of all the major components of power systems	**L1(Remembering)**
CO2.	Understand the unit commitment problems and methods to solve the problems	**L2(Understanding)**
CO3.	Deploy frequency control, voltage control, active and reactive power control schemes on power system	**L3(Apply)**
CO4.	Compare various reactive power compensation schemes	**L4(Analysis)**
CO5.	Assess the best possible control for power system operation	**L5(Evaluating)**
CO6.	Develop generation dispatching, power system monitoring and control schemes for optimal operation and control	**L6(Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

AUTOMATIC GENERATION CONTROL: Introduction to AVR and ALFC loops, Modeling of turbine speed governing system, Generator Load model, load frequency control of an isolated area, its steady state performance and dynamic performance for first order approximate system, Load frequency Vs economic control, dead band, digital load flow control, decentralized control.

UNIT-II

EXCITATION & VOLTAGE CONTROL: Role of Exciter and its control, Classification of Excitation System, Rotating self-excited and pilot excited type Voltage regulators, static excitation

system, brushless excitation system, boost buck excitation system and development of block diagram and transfer function for it, Role of PID Controller in Excitation system, Voltage control through shunt compensation; Series compensation; Tap changing transformer; Booster transformer; induction regulators,

UNIT-III

Power Systems Stability: Definitions: angular stability- steady state stability, dynamic stability, transient stability, Dynamics of synchronous machine and swing equation, equal area criteria for various types of disturbances, critical clearing angle, solution of swing equation, technique of improving transient stability, Voltage stability, voltage stability concept for pure inductive load, Voltage collapse, voltage collapse proximate indicator.

UNIT-IV

ECONOMIC LOAD DISPATCH: Generators operation cost, Economic dispatch problem, Economic Dispatch including transmission loss, derivation of transmission loss formula, Classification of hydro plants, Long range and short range problem, Short range fixed head hydrothermal scheduling.

POWER DISTRIBUTION SYSTEM

General Course Information:

Course Code: **PC/EE/72-T** Course Credits: 3.0 Mode: Lecture (L) Type: Program Core Teaching Schedule L T P: 3 0 0 Examination Duration: 3 hours	**Course Assessment Methods; Max. Marks: 100 (Internal: 30; External: 70)** Three minor tests, each of 20 marks, will be conducted. The third minor will be conducted in open book mode by the Course Coordinator. No date sheet will be issued for the third minor at the level of the Departments. For the purpose of internal assessment, the average of the highest marks obtained by a student in any two minor examinations will be considered. All the minor examination question papers will be prepared and evaluated by following the Outcome Based Education framework. Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks). The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Understand Power Distribution System, an important aspect of overall Electricity Supply System	**L1(Remembering)**
CO2.	Understand the various components of power distribution systems.	**L2(Understanding)**
CO3.	Analyze the T&D losses in the power distribution system	**L3(Apply)**
CO4.	Understand the issues in the existing power distribution system.	**L4(Analysis)**
CO5.	Evaluating AT&C losses in the distribution system.	**L5(Evaluating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Introduction: Introduction to sub-transmission and distribution system; classification of loads – residential, commercial, agricultural, industrial and their characteristics; distribution system planning – short-term, mid-term, long-term, Load scheduling & dispatch, Load balancing, load modeling and characteristics; definition of demand factor, utilization factor, load factor, plant factor, diversity factor, loss factor; computer applications to distribution system automation; tariff

UNIT-II

Electrical System Components: Basic Distribution System, Components of the distribution system, Distribution feeders, transformers and sub-stations; primary feeders – voltage level, radial and loop types, Operation & Maintenance (O&M) objectives, Activities involved in O&M,

Distribution transformers - Reasons for DT failures, design considerations for secondary system – voltage level, location of substation, rating, service area with primary feeders, existing system improvement.

UNIT-III

Power Distribution System Analysis: System analysis – voltage drop and power loss calculation; methods of solution for radial networks, three-phase balanced primary lines, loss reduction, voltage regulation, voltage control and improvement, issues in quality of service – voltage sag, swell and flicker, power factor correction, economic justification for capacitor with cost-benefit analysis aiming at most economic power factor, optimum location of capacitor, Distribution sub-station bus schemes.

UNIT-IV

T&D losses in Power Distribution system: Energy Accounting in power distribution system: Need, objectives & functions, Energy flow diagram in power distribution system, Concepts of T&D, AT&C losses in distribution system, factors contributing to high technical & commercial losses. Measures for Technical and commercial loss reduction, long term plans for technical loss reduction, case studies.

RENEWABLE ENERGY LABORATORY

General Course Information:

Course Code: **PC/EE/73-P** Course Credits: 1.0 Mode: Practical (P) Type: Program Core Teaching Schedule L T P: 0 0 2	**Course Assessment Methods (Internal: 50; External: 50)** Internal continuous assessment of 50 marks by course coordinator as per the course assessment method (Annexure I). For the end semester practical examination, the assessment will be done out of 50 marks by the external and internal examiners as per the course assessment method (**Annexure I**).

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	**Experimental** work and acquire technical knowledge to solve out the problems of renewable energy systems and control.	**HOTS L4 (Analyzing)**
CO2.	**Interpret** the performance characteristics of the linear and non-linear loads on the operation of renewable energy systems.	**LOTS L3 (Applying)**
CO3.	**Calculate** the suitability of renewable energy system devices and implementation of its control devices.	**HOTS L5 (Evaluating)**
CO4.	**Appraise** the implementation of these methods in the Simulation environment as well as in the industries.	**HOTS L5 (Evaluating)**
CO5.	**Organize** reports based on experiments performed with effective demonstration and analysis of results.	**HOTS L4 (Analyzing)**
CO6.	**Inculcate** ethical practices while performing experiments individually and in groups.	**LOTS L3 (Applying)**

*Revised Bloom's Taxonomy Action verbs/Level

LIST OF EXPERIMENTS:

1. Observation of current waveform for linear & non-linear loads & calculations
2. Impact of transmission line inductance on voltage quality at PCC.
3. Power factor correction using capacitor bank and its impact on power quality at PCC
4. Synchronization of solar PV inverter and it's 4 performance analysis.
5. Evaluation of active and reactive power & apparent energy flow between grid tied inverter, grid & load & net metering concept.
   SIMULATION EXPERIMENTS
6. Modelling of PV cell
7. Effect of Temperature Variation On Photovoltaic Array.
8. Effect of irradiation on a photovoltaic array.
9. Design of solar PV boost converter using P&O MPPT technique.

NOTE: At least eight experiments are to be performed in the semester, out of which at-least six experiments should be performed from the above list. Remaining experiments may either be performed from the above list or designed & set by the concerned course coordinator as per the scope of the syllabus.

Course Content

UNIT- I

Network Topology and Matrices: Elementary Graph theory, Incidence matrices, Primitive network and primitive network matrices, Formation of various network matrices by singular transformations, Building algorithm for Bus Impedance matrix (Z_{bus}), Modification of bus impedance matrix for change of reference bus and network changes, formation of bus admittance matrix.

UNIT- II

Load-Flow Studies: Introduction, Importance of load flow studies, Classification of buses, load-flow equations, Iterative methods, Computer algorithms and load flow solutions using Gauss- Seidel and Newton-Raphson methods, Decoupled and fast decoupled Load-flow solutions, Representation of regulating and off-nominal ratio transformers, Comparison of load-flow solution methods.

UNIT- III

Fault studies: Symmetrical faults, Calculation of fault currents, Use of current limiting reactors, Unsymmetrical faults, Symmetrical components theory, Transformation matrix, Unsymmetricalshort circuit analysis: LG, LL, LLG using matrix method,

UNIT- IV

Stability Studies: Steady state and transient stability, swing equation, Steady state stability analysis, Transient stabilityanalysis, Equal area criterion, Algorithms and flow charts for transient stability solution using Runge-Kutta and modified Euler methods, multi-machine stability analysis

LIST OF EXPERIMENTS:

The following experiments may be performed with the help of MATLAB based power system analysis tools PSAT, PST, PSCAD, ETAP etc.

1. Formation of Y_{bus} matrix by using inspection / analytical method.
2. Formation of Z_{bus} using building algorithm.
3. Load flow analysis using Gauss Seidel method.
4. Load flow analysis using Newton Raphson method.
5. Load flow analysis using Fast Decoupled method
6. Simulation of single line to ground fault.
7. Simulation of single line to Line fault.
8. Simulation of double line to ground fault.
9. Simulation of Three Phase Short Circuit fault.
10. Transient stability simulation for single machine and multi-machine system.

NOTE: At least eight experiments are to be performed in the semester, out of which at-least six experiments should be performed from above list. Remaining experiments may either be performed from the above list or designed & set as per the scope of the syllabus.

Course Content

<div align="center">**UNIT-I**</div>

INTRODUCTION TO DC MACHINES: Major considerations in Electrical Machine Design, Electrical Engineering Materials, Space factor, Choice of Specific Electrical and Magnetic loading, Thermal considerations, Heat flow, Temperature rise, Rating of machines, Standard specifications.

DC machines, Output Equations, Design of main dimensions, Magnetic circuit calculations, Carter's Coefficient, Net length of Iron, Real and Apparent flux densities, Selection of number of poles, Design of Armature, Design of commutator and brushes.

<div align="center">**UNIT-II**</div>

TRANSFORMERS: Output Equations, Main Dimensions, kVA output for single and three-phase transformers, Window space factor, Overall dimensions, Operating characteristics, Regulation, No load current, Temperature rise in Transformers, Design of Tank, Methods of cooling of Transformers

<div align="center">**UNIT-III**</div>

INDUCTION MOTOR: Output equation of Induction motor, Design of main dimensions, Length of air gap, Rules for selecting rotor slots of squirrel-cage machines, Design of rotor bars and slots, Design of end rings.

SYNCHRONOUS MACHINES: Pole construction, run away speed, output equation, choice of specific loading, Short circuit ratio, shape of pole face, Armature design, Armature parameters, Estimation of air gap length, Design of field system.

<div align="center">**UNIT-IV**</div>

COMPUTER AIDED DESIGN: Introduction, manual versus Computer aided design, Approach to Computer aided design, Design synthesis, Special Requirements, Program for Different machines, Computer aided design in industry, Illustrative design, limitations in Computer aided designs.

ADVANCED POWER ELECTRONICS

General Course Information:

Course Code: **PE/EE/72-T** Course Credits: 3.0 Mode: Lecture (L) Type: Program Elective Teaching Schedule L T P: 3 0 0 Examination Duration: 3 hours	**Course Assessment Methods; Max. Marks: 100 (Internal: 30; External: 70)** Three minor tests, each of 20 marks, will be conducted. The third minor will be conducted in open book mode by the Course Coordinator. No date sheet will be issued for the third minor at the level of the Departments. For the purpose of internal assessment, the average of the highest marks obtained by a student in any two minor examinations will be considered. All the minor examination question papers will be prepared and evaluated by following the Outcome Based Education framework. Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks). The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Reproduce technical and intellectual capability in Power Electronics & Power System and to develop interest for life-long learning.	**L1(Remembering)**
CO2.	Identify the drawbacks of speed control of motor by conventional methods.	**L2(Understanding)**
CO3.	Solve problems satisfactorily in the field of Power Electronics and Power System and arrive at appropriate solution.	**L3(Apply)**
CO4.	Compare, formulate and analyze a power electronic software based circuit design and its control drive performance.	**L4(Analysis)**
CO5.	Select the simulation software based on alternative solutions in an industries.	**L5(Evaluating)**
CO6.	Formulate and design mathematical modeling for various engineering problems	**L6(Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Introduction to ordinary differential equation solvers, steps of using ODE solvers, Types of mathematical models, developing a model, Mathematical modeling of simple electrical, Mechanical and electro mechanical systems.

UNIT-II

Simulation of power electronic converters: State-space representation, Trapezoidal integration, M and N method.

UNIT-III

Modeling: Steady state analysis of converters, dynamic analysis of converters, state space average modeling, PWM modeling, modeling of converters operating in continuous and discontinuous conduction mode, converter transfer functions.

Simulation of electric drives: Modeling of different PWM Techniques, Modeling and simulation of Induction motor, Vector controlled 3-Ph Induction motor.

UNIT-IV

Control Techniques in Power Electronics: State space modelling and simulation of linear systems, conventional controllers using small signal models, Fuzzy control, Hysteresis controllers, Output and state feedback switching controllers. Modeling, simulation of switching converters with state space averaging, State Space Averaging Technique and its application in simulation and design of power converters.

CO1.	Understanding the energy scenario and the consequent growth of the power generation from renewable energy sources	L1 (Remembering)
CO2.	Understanding the basic physics of wind and solar power generation.	L2 (Understanding)
CO3.	Applications of power electronic interfaces for wind and solar generation.	L3 (Applying)
CO4.	Evaluating the issues related to the grid-integration of solar and wind energy systems.	L4(Analyzing)
CO5.	To create and design the Network Integrating Systems of Wind and Solar Systems	L6 (Creating)

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT-I

Physics of Wind Power: History of wind power, Indian and Global statistics, Wind physics, Betz limit, Tip speed ratio, stall and pitch control, Wind speed statistics-probability distributions, Wind speed and power-cumulative distribution functions.

Solar thermal power generation: Technologies, Parabolic trough, central receivers, parabolic dish, Fresnel, solar pond, elementary analysis.

UNIT-II

Wind generator topologies: Review of modern wind turbine technologies, Fixed and Variable speed wind turbines, Induction Generators, Doubly-Fed Induction Generators and their characteristics, Permanent Magnet Synchronous Generators, Power electronics converters. Generator-Converter configurations, Converter Control.

Unit-III

The Solar Resource: Introduction, solar radiation spectra, solar geometry, Earth Sun angles, observer Sun angles, solar day length, Estimation of solar energy availability.

Solar photovoltaic: Technologies-Amorphous, monocrystalline, polycrystalline; V-I characteristics of a PV cell, PV module, array, Power Electronic Converters for Solar Systems, Maximum Power Point Tracking (MPPT) algorithms. Converter Control.

UNIT-IV

Network Integration Issues: Overview of grid code technical requirements. Fault ride-through for wind farms - real and reactive power regulation, voltage and frequency operating limits, solar PV and wind farm behavior during grid disturbances. Power quality issues. Power system interconnection experiences in the world. Hybrid and isolated operations of solar PV and wind systems.

CO1.	State the working principle of electric power utilization and their application in real life	**L1(Remembering)**
CO2.	Select proper traction systems depending upon application considering economic and technology up-gradation.	**L2(Understanding)**
CO3.	Employ mathematical and graphical analysis considering different practical issues to design of traction system; analyze the performance parameter of the traction system.	**L3(Apply)**
CO4.	Examine various applications in indoor and outdoor application areas where use of light sources are essential.	**L4(Analysis)**
CO5.	Develop a clear idea on various illumination techniques and hence design lighting scheme for specific applications.	**L5(Evaluating)**
CO6.	State the working principle of electric power utilization and their application in real life	**L6(Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Illumination: Terminology, Laws of illumination, Photometry, lighting calculations. Electric lamps – Different types of lamps, LED lighting and Energy efficient lamps. Design of lighting schemes – factory lighting - flood lighting – street lighting.

UNIT-II

Electric Heating: Types of heating and applications, Electric furnaces - Resistance, inductance and Arc Furnaces, Electric welding and sources of welding, Electrolytic processes – electro-metallurgy and electro-plating. Refrigeration-Domestic refrigerator and water coolers – Air -Conditioning-Various types of air conditioning system and their applications, smart air conditioning units - Energy Efficient motors

UNIT-III

Electrolytic Processes: Introduction, Electrolyte, Ionization, Definition of various terms used in Electrolysis, Faradays' laws of Electrolysis, Extraction of Metals, Refining of metals, Electro-Deposition, Power Supply for Electrolytic Processes.

UNIT-IV

Traction System: Requirement of an ideal traction system, power supply, traction drives, electric braking, Train movement (speed time curve, simplified speed time curve, average speed and schedule speed).Use of AC series motor and Induction motor for traction.
Traction motor control: DC series motor control, multiple unit control, braking of electric motors.

Course Outcomes

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT[*] Level
CO1.	Describe the present state of energy scenario	**L1(Remembering)**
CO2.	Describe the energy management and savings through the different levels during utilization	**L2(Understanding)**
CO3.	Solve the problems related with energy management and audit.	**L3(Apply)**
CO4.	Perform economic and energy efficiency analysis of various electrical devices on the behalf of their energy audit repot.	**H1(Analysis)**
CO5.	Create energy audit report for industrial, residential and commercial consumers	**H3 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Level

Course Content

UNIT-I

Energy Scenario: Commercial and Non-Commercial Energy, Primary and Secondary Energy Resources, Conventional and non-conventional energy, Commercial Energy Production, Final Energy Consumption, Energy Needs of Growing Economy, Long Term Energy Scenario, Energy Pricing, Energy Sector Reforms, Energy and Environment: Air Pollution, Climate Change, Energy Security, Energy Conservation and its Importance, Energy Strategy for the Future

UNIT-II

Energy Management Functions: Need for energy management, Energy management program, Organizational Structure, Energy Policy, Planning, Audit Planning, Educational Planning, Strategic Planning, Reporting

UNIT-III

Electrical Energy Management: Electricity tariff, Electrical Load Management and Maximum Demand Control, Maximum demand controllers, Power Factor & Its importance, Automatic power factor controllers, Energy efficient motors, Soft starters with energy saver, Energy efficient transformers, Electronic ballast, Energy efficient lighting controls

UNIT-IV

Energy Audit: Definition, Energy audit- need, Types of energy audit, Energy Auditing Services, Basic Components of an Energy Audit, Specialized Audit Tools, Industrial Audits, Commercial Audits, Residential Audits, Indoor Air Quality and basics of economic analysis.

Course Outcomes

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Recall the basics of power system.	**L1(Remembering)**
CO2.	Describe the performance of different soft computing techniques in the context of power system.	**L2(Understanding**
CO3.	Solve the problems related with soft computing techniques in the context of power system.	**L3(Apply)**
CO4.	Compare the performance soft computing techniques for optimization of system.	**H1(Analysis)**
CO5.	Judge and analyze the performance of system with the implementation of soft computing techniques.	**H2 (Evaluating)**
CO6.	Create new algorithm (model) for the betterment of power system operation with economics parameters.	**H3 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Level

Course Content

UNIT-I

Soft Computing: Introduction, requirement, different soft computing techniques and their characteristics, comparison with hard computing, applications.

UNIT II

Fuzzy sets and Fuzzy logic: Introduction, Fuzzy sets versus crisp sets, properties of fuzzy sets, operations on fuzzy sets, Extension principle, Fuzzy relations, Linguistic variables, linguistic terms, Linguistic hedges, Fuzzy reasoning, Mamdani and TSK fuzzy inference systems, Applications.

UNIT III

Artificial Neural Network: Introduction, comparison with biological neural network, basic models of artificial neuron, different architectures of ANN, Learning techniques, Applications.

UNIT IV

Evolutionary algorithms: Genetic Algorithm (GA), different operators of GA, convergence of Genetic Algorithm, Particle swarm optimization algorithm, other Applications of GA.

CO6.	Design and analysis of general structure of an automated process for real time applications using SCADA	**L6(Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Introduction: Introduction to SCADA systems, Fundamental Principle of Modern SCADA Systems, Monitoring and supervisory functions, Application area of SCADA system.

UNIT- II

SCADA System Components, Remote Terminal Unit-(RTU), Intelligent Electronic Devices (IED), Programmable Logic Controller (PLC), Communication Network, SCADA Server, SCADA/HMI Systems.

UNIT- III

SCADA Architecture: Various SCADA architectures, advantages and disadvantages of each system - single unified standard architecture -IEC 61850 SCADA Communication: various industrial communication technologies -wired and wireless methods and fiber optics. Open standard communication protocols.

UNIT- IV

SCADA Applications: Utility applications- Transmission and Distribution sector -operations, monitoring, analysis and improvement. Industries - oil, gas and water. Case studies, Implementation, Simulation exercises.

Course Outcomes

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Memorize the basic concepts of Internet, embedded system and wireless network.	**L1(Remembering)**
CO2.	Understand the concepts of Internet of Things	**L2(Understanding)**
CO3.	Choose the specific application to apply the concept of IOT.	**L3(Apply)**
CO4.	Analyze basic protocols in wireless sensor network.	**H1(Analysis)**
CO5.	Design IOT applications in different domain and be able to analyze their performance	**H3 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Level

Course Content

UNIT-I

Introduction and Concepts of IOT: Introduction to IOT, definition and characteristics of IOT, Architecture of Internet of Things, Physical and logical design of IOT, IOT enabling technologies, IOT levels and deployment templates, Domain specific IOTs, home automation, cities, environment, Domain specific IOTs, Energy, retail, agriculture, industry, health and lifestyle.

UNIT-II

IOT Challenges & IOT-M2M Communication: Design challenges, Development challenges, Security challenges, Other challenges, Machine to Machine, Difference between IoT and M2M, Software define Network, Wireless medium access issues, MAC protocol survey, Survey routing protocols, Sensor deployment & Node discovery, Data aggregation & dissemination,

UNIT-III

Introduction to Hardware used for IoT: Microcontrollers, Microprocessors, Sensors, Introduction to Arduino, RF Protocols: RFID, NFC, Bluetooth Low Energy (BLE), IPv6 for Low Power and Lossy Networks (6LoWPAN) and Routing, Protocol for Low power and lossy networks (RPL).

UNIT-IV

Developing IOTs: Introduction to Python, Introduction to different IOT tools, Developing applications through IOT tools, Developing sensor based application through embedded system platform, Implementing IOT concepts with python.

FLEXIBLE AC TRANSMISSION SYSTEMS

General Course Information:

Course Code: **PE/EE/81-T**	**Course Assessment Methods; Max. Marks: 100 (Internal: 30; External: 70)**
Course Credits: 3.0 Mode: Lecture (L) Type: Program Elective Teaching Schedule L T P: 3 0 0 Examination Duration: 03 hours	Three minor tests, each of 20 marks, will be conducted. The third minor will be conducted in open book mode by the Course Coordinator. No date sheet will be issued for the third minor at the level of the Departments. For the purpose of internal assessment, the average of the highest marks obtained by a student in any two minor examinations will be considered. All the minor examination question papers will be prepared and evaluated by following the Outcome Based Education framework. Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks). The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Revise the basics of power transmission networks and need for FACTS controllers	**L1(Remembering)**
CO2.	Understand and classify different power system FACTS Controllers	**L2(Understanding)**
CO3.	Demonstrate the scope of the specific FACTS controllers for power flow control issues in transmission lines.	**L3(Apply)**
CO4.	Analyze the operation of various FACTS controllers and solve simple power systems with FACTS controllers	**L4(Analysis)**
CO5.	Select the specific FACTS controllers for power system compensation	**L5(Evaluating)**
CO6.	Design simple FACTS controllers	**L6(Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Introduction: Review of basics of power transmission networks, Control of power flow in AC transmission line, Types of Flexible AC Transmission System Controllers: Shunt, Series, combined

Shunt-. Applications of FACTS controllers in Distribution System, Uncompensated AC Transmission line, Passive reactive power compensation, Series and shunt compensation at the mid-point of the line.

UNIT-II

Static Shunt Compensators (SVC and STATCOM): Objectives of Shunt Compensation, **Static VAR Compensator (SVC)**: Typical SVC Configuration, Control Characteristics of SVC, SVC Controller, Modelling of SVC, Application, **Static synchronous compensator (STATCOM):** Principle of operation, Three Phase Six Pulse STATCOM, Voltage & Current waveforms, Application, Comparison of SVC and STATCOM

UNIT- III

Static Synchronous Series Compensator (SSSC): Concepts of Controlled Series Compensation, operation of SSSC, Operating region and control characteristics of SSSC, **Thyristor Controlled Series Capacitor (TCSC):** Operation of TCSC, Block diagram, circuit, voltage and current waveforms, Applications **GTO thyristor Controlled Series Controller (GCSC):** Operation of GCSC, circuit, voltage and current waveforms, Applications

UNIT- IV

Combined Compensators: Unified Power Flow Controller (UPFC): Basic operating principle & characteristics, UPFC connected at the receiving end, UPFC connected at the Midpoint, Control of UPFC, Applications, **Interline Power Flow Controllers (IPFC)**: Basic operating principle & characteristics, representation, Applications, Comparison of UPFC and IPFC

CO1.	Describe the various technical and economic benefits of Distributed Generations.	**L1(Remembering)**
CO2.	Recognize the need of siting and sizing of distributed generation along with their effect on distribution system.	**L2(Understanding)**
CO3.	Apply economic feasibility analysis	**L3(Apply)**
CO4.	Examine the technical issue in Distributed Generations system	**L4(Analysis)**
CO5.	Evaluate the appropriate optimization technique suitable for Distributed Generations.	**L5(Evaluating)**
CO6.	Develop a Model a micro grid taking into consideration the planning and operational issues of the Distributed Generations to be connected in the system	**L6(Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Introduction: Conventional power generation: advantages and disadvantages, Energy crises, Nonconventional energy (NCE) resources: basics of Solar PV, Wind Energy systems, Fuel Cells, micro-turbines, biomass, and tidal sources.

UNIT-II

Distributed Generations: Concept of distributed generations, Topologies, selection of sources, regulatory standards/ framework, Standards for interconnecting Distributed resources to electric power systems: IEEE 1547, Energy storage elements: Batteries, ultra-capacitors, flywheels, Superconducting magnetic energy storage.

UNIT-III

Micro grids: Concept and definition of micro grid, micro grid drivers and benefits, review of sources of Micro grids, typical structure and configuration of a Micro grid, AC and DC Micro grids, Power Electronic interfaces in DC and AC Micro grids.

UNIT-IV

Impact of Grid Integration: Requirements for grid interconnection, limits on operational parameters: voltage, frequency, THD Impact of grid integration with NCE sources on existing power system: reliability, stability and power quality issues.

CO1.	Describe the basics of power electronic devices and quality of power supply.	**L1(Remembering)**
CO2.	Illustrate the issues related with power quality.	**L2(Understanding)**
CO3.	Solve the problems related with power quality.	**L3(Apply)**
CO4.	Compare the power quality problems.	**H1(Analysis)**
CO5.	Evaluate and judge the solutions related with power quality.	**H2 (Evaluating)**
CO6.	Design can be formulated as per required specification and issue.	**H3 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Level

Course Content

UNIT-I

Introduction to Power Quality: Introduction to power distribution system- deregulated environment, Power Quality (PQ): definitions, concerns, and evaluations, Terminology: under-voltage, over voltage, transients, harmonics, voltage unbalance, voltage sags, voltage swells, flicker, interruptions, and power frequency variations, Concepts of transients - short duration variations such as interruption -long duration variation such as sustained interruption, International standards of power quality, Computer Business Equipment Manufacturers Associations (CBEMA) curve

UNIT-II

Voltage Sags, Interruptions and Over voltages: Sources of sags and interruptions - estimating voltage sag performance, Voltage sag due to induction motor starting, Estimation of the sag severity, Active Series Compensator, Static transfer switches and fast transfer switches, Sources of over voltages - Capacitor switching - lightning, Mitigation of voltage swells - surge arresters - power conditioners, Lightning protection - shielding - line arresters.

UNIT-III

Power System Harmonics: Harmonic sources from commercial and industrial loads, locating harmonic sources, Power system response characteristics - Harmonics Vs transients, Effect of harmonics - harmonic distortion - voltage and current distortion - harmonic indices, Devices for controlling harmonic distortion - passive and active filters, IEEE and IEC standards.

UNIT-IV

Power Quality Monitoring and Distributed Generation: Power Quality Monitoring - Industry requirements - standards, Power Quality Measurement Equipment: Power line disturbance analyser, Harmonic analyser-Spectrum analyser, Flicker meters and Disturbance analyser.

Introduction to DG Technologies: Interface to the Utility System-Power Quality issues, Site study for Distributed Generation-Interconnection standards, Issue on Power Quality in Smart Grids and Micro Grids

Course Outcomes

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Recall the basics of Power system and its design aspects.	**L1(Remembering)**
CO2.	Describe the structure of smart grid on the basis of traditional grid with the role of automation in transmission and distribution.	**L2(Understanding)**
CO3.	Demonstrate the operation, scheduling and economics using evolutionary algorithms for smart grid and maximum utilization of renewable energy resources.	**L3(Apply)**
CO4.	Compare its performance with conventional grid and analyze the role of frequency for the control of grid.	**H1(Analysis)**
CO5.	Judge and evaluate the efficiency of system on the basis of supply of electricity with its economic indices.	**H2 (Evaluating)**
CO6.	Formulate algorithm or automation so that maximum consumer can be benefitted and losses of the system can be minimized.	**H3 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Level

Course Content

UNIT-I
Introduction to Smart Grid: Smart Grid, Need of Smart Grid, Working definitions of Smart Grid and associated concepts, Smart Grid Functions, Traditional Power Grid and Smart Grid, New Technologies for Smart Grid, Advantages, Whole sale energy market in smart grid, Indian Smart Grid, Key Challenges for Smart Grid.

UNIT-II
Smart Grid Architecture: Components and Architecture of Smart Grid Design, Review of the proposed architectures for Smart Grid, Fundamental components of Smart Grid designs, Transmission Automation, Distribution Automation, Renewable Integration, Energy Management in smart grid.

UNIT-III
Tools and Distribution Generation Technologies: Introduction to Renewable Energy Technologies, Micro grids, Storage Technologies, Electric Vehicles and plug-in hybrids, Environmental impact and Climate Change, Economic Issues, Advanced metering infrastructure.

UNIT-IV
Communication Technologies and Smart Grid: Introduction to Communication Technology, Synchro Phasor Measurement Units (PMUs), Wide Area Measurement Systems (WAMS).
Control of Smart Power Grid System: Load Frequency Control (LFC) in Micro Grid System – Voltage Control in Micro Grid System, Reactive Power Control in Smart Grid, Case Studies for the Smart Grids.

CO1.	Elicit the major components, advantages, limitations and applications of EHV AC and DC transmission Systems	**L1(Remembering)**
CO2.	Recapitulate the fundamental aspects of Extra High Voltage A.C and DC transmission design and analysis	**L2(Understanding)**
CO3.	Apply the remedial measures against the problems associated with EHVAC and DC transmission such as Corona, AN, RI, Over-voltages, Ferro-resonance, Harmonics in converters	**L3(Apply)**
CO4.	Perform in-depth analysis of various control techniques for controlling the power flow through a dc link and multi-terminal operation of HVDC	**L4(Analysis)**
CO5.	Critically evaluate AC and DC transmission system with respect to all aspects	**L5(Evaluating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Introduction: Need of EHV transmission, standard transmission voltage, Power handling capacity, Comparison of EHV AC & DC transmission systems and their applications & limitations, Bundled conductors, Surface voltage gradients in conductor, Distribution of voltage gradients on sub-conductors, mechanical considerations of transmission lines, modern trends in EHV AC & DC transmission.

UNIT- II

EHV AC Transmission: Corona, Corona loss formulae, corona current, Audible noise- generation and characteristics corona pulses their generation and properties, Radio interference (RI) effects, Over voltage due to switching, Ferro-resonance, reduction of switching surges on EHV system, principle of half wave transmission**.**

UNIT- III

Components of EHV D.C.: Converter circuits, Rectifier and inverter valves, Reactive power requirements, Harmonics generation, Adverse effects, Classification, Remedial measures to suppress, Filters, Ground return, Converter faults & protection harmonics, misoperation, Commutation failure, Multi-terminal D.C. lines.

UNIT- IV

Control of EHV D.C.: Desired features of control, control characteristics, Constant current control, Constant extinction angle control. Ignition Angle control, Parallel operation of HVAC & DC system, Problems & advantages.

Course Content

UNIT-I

Introduction: Measures for Energy Conservation, History of Electrical Power Generation, Laws, Efficient Transmission Arrangements, Measures for Energy Conservation, History of Electrical Power Generation, The Laws, Challenges and Issues in Competition Market, Competition in Generation, Efficient Transmission Arrangements. Role of different Authorities in Power Sectors.

UNIT-II

Power Trading: Term-Ahead Market (TAM), Short-Term Open Access in Inter-state Transmission, (Collective Transaction/Pool Transaction),Present Practice,Market Clearing Process (MCP), Linear Bid Market, Determination of MCP for Single Sided Linear Bid Market

UNIT-III

Load Frequency control: Power Industry Scenario, Introduction to AVR and ALFC Loops, review of modeling of an Isolated Generating System, Model for a Vessel, Reheat Type Steam Turbine Model, Complete Block Diagram Representation of LFC of an Isolated Area , Indian Power Industry Restructuring, Challenges in Load Frequency Control, Disco Participation Matrix (DPM),ACE Participation Factors, Transaction During Contract Violation/Pool Based Transaction, Mathematical Modeling of AGC with Restructuring

UNIT-IV

Available Power Transfer Capability: Fundamentals and Importance of ATC, Algorithm for ATC Determination, Methods of ATC Determination, Power Transfer Distribution Factors Based on D.C. Load Flow Approach, Static ATC Determination Using A.C. Power Transfer Distribution Factor.

HIGH VOLTAGE ENGINEERING

General Course Information:

Course Code: **PE/EE/87-T** Course Credits: 3.0 Mode: Lecture (L) Type: Program Elective Teaching Schedule L T P: 3 0 0 Examination Duration: 3 hours	**Course Assessment Methods; Max. Marks: 100 (Internal: 30; External: 70)** Three minor tests, each of 20 marks, will be conducted. The third minor will be conducted in open book mode by the Course Coordinator. No date sheet will be issued for the third minor at the level of the Departments. For the purpose of internal assessment, the average of the highest marks obtained by a student in any two minor examinations will be considered. All the minor examination question papers will be prepared and evaluated by following the Outcome Based Education framework. Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks). The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course outcomes:

Sr. No.	Course outcomes	RBT* Level
	At the end of the course students will be able to:	
CO1.	Describe the Knowledge about high voltage generation	**L1(Remembering)**
CO2.	Discuss the testing methods of High Voltage Equipment	**L2(Understanding)**
CO3.	Find the problem occur in high voltage generation	**L3(Apply)**
CO4.	Test various apparatus and their measurement method for generating high voltages.	**L4(Analysis)**
CO5.	Select the reasons of overvoltage in power system and protection methods against them.	**L5(Evaluating)**
CO6.	Formulate the incidence, network matrices and model of the power system components.	**L6(Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Break Down Mechanism of Gaseous Materials: Mechanism of Breakdown of gases, Townsend's first Ionization Co-efficient, Townsend's second Ionization Co-efficient, Townsend's Breakdown Mechanism, and Streamer Theory of Breakdown in gases, Paschen's law.

UNIT-II

Breakdown in Liquid and Solid Dielectrics: Suspended Particle Theory, Cavity Breakdown, Electro- convection Breakdown, Breakdown in solid Dielectrics, Intrinsic Breakdown, Electromechanical Breakdown, Breakdown due to Treeing and Tracking, Thermal Breakdown, Electrochemical Breakdown

UNIT-III

Generation of High Dc and Ac Voltages: Introduction, Rectifier circuits, Cockcroft- Walton voltage multiplier circuit, electrostatic generator, generation of high ac voltages by cascaded transformers, series resonant circuit.

UNIT-IV

High Voltage Testing & Measurement: Sphere-Gap, Uniform field Spark gap, Rod Gap, Electrostatic Voltmeter, Generating Voltmeter, Impulse Voltage Measurement using Voltage divider, Measurement of high DC, AC and Impulse Current., Testing of line Insulator, Testing of Cable, Testing of Bushings, Testing of Power Capacitor, Testing of Power Transformers, Testing of Circuit Breaker.

Course Content

UNIT- I

DATABASE SYSTEM ARCHITECTURE: Data Abstraction, Data Independence, Data Definition Language (DDL), Data Manipulation Language (DML).

DATA MODELS: Entity-relationship model, network model, relational and object oriented data models, integrity constraints, data manipulation operations

UNIT- II

RELATIONAL QUERY LANGUAGES: Relational algebra, Tuple and domain relational calculus, SQL3, DDL and DML constructs, Open source and Commercial DBMS – MYSQL.
RELATIONAL DATABASE DESIGN: Domain and data dependency, Armstrong's axiom, Normal forms, Dependency preservation, Lossless design.
QUERY PROCESSING AND OPTIMIZATION: Evaluation of relational algebra expressions, Query equivalence, Join strategies, Query optimization algorithms..

UNIT- III

INTRODUCTION TO BIG DATA AND HADOOP: Introduction to Big Data, Big Data Analytics, History of Hadoop, Apache Spark, Analysing Data with Hadoop.
HDFS (HADOOP DISTRIBUTED FILE SYSTEM): Design of HDFS, Command Line Interface, Hadoop file system interfaces, Data flow, Data Ingest with Flume and Scoop and Hadoop archives, Hadoop I/O: Compression and Serialization.

UNIT- IV

MAP REDUCE & CLASSIFICATION METHODS:
MAP REDUCE: Anatomy of a Map Reduce Job Run, Failures, Job Scheduling, Shuffle and Sort, Task Execution, Map Reduce Types and Formats, Map Reduce Features.
Overview of Clustering – K-means: Use Cases–Overview of the Method, Determining the Number of Clusters, Diagnostics – Reasons to Choose and Cautions, Classification: Decision Trees Introduction to streams concepts and NoSQL databases.

Detailed Syllabus

of

B. Tech. (EE)

VIII Semester

(Full Semester Industrial Training)

Proposed Policy

B. Tech. Students under 2016 schemer will be allowed to join industrial training / internships for full one semester under following condition:

1. If the student gets selected for the job though campus placements (permitted/ coordinated by T &cell) and the employer is willing to take the student for the training/ internship for a period of full one semester (for VIII Semester)

Or

2. If the student (who is not having any pending (unlearned) backlog up to 6th semester and minimum CGPA of 6.0)gets offer of one semester (for VIII semester) training/ internship permitted /coordinated by cell) with minimum stipend/ fellowship of Rs 15000/. Per month from any of the following:

- Reputed research organization
- Govt sponsored project
- Govt research Institution
- Multi- National company (MNC)
- Very reputed company (Registered with Ministry of corporate Affairs with minimum 5 year of existence)
- Public Sector undertaking
- 250 bed reputed hospital (for BME)

In case result of 6th semester has not been declared then there should be no pending (uncleared) backlog up 5th Semester.

To fulfill either of the above two conditions, under any circumstances the student will not make any payment (directly/ indirectly) to the respective company /organization, student will apply to T&P cell at least 15 days before the commencement of VIII Semester along with offer letter on prescribed format. T&P cell will verify (as above conditions) and recommend his/ her application and send the same to Dean PET for approval of Dean FET.Evaluation of said internship will be done in accordance with guidelines framed by the University.

EVALUATION GUIDELINES FOR TRAINING/ INTERNSHIP during VIII SEMESTER
(Under B. Tech 2023-2024 Scheme)

FACULTY OF ENGINEERING & TECHNOLOGY
CHAUDHARY DEVI LAL UNIVERSITY, SIRSA

GUDELINES FOR VIII SEMESTER TRAINING/ INTRTNSHIP

(A) **Duration:**
16-18 weeks, this should start latest by 1stFeb and end on or before 31stMay

(B) **General Guidelines:**
  i. Eligible students will apply to T&P Cell atheist 15 days before the commencement of VIII semester along with offer letter on prescribed format. T&P cell well recommend the application for approval of Dean FET (CDLU, Sirsa) through Chairperson of respective Department / Principal (as per prescribed format available on website/ T&P cell of University). Chairperson/ Principal will suggest name of Faculty Mentor before forwarding application to Dean FET for approval. Student will then proceed on training / INTRTNSHIP after obtaining approval latter from T&P Cell. Principal will submit application to Dean FET through T&P Cell of University.

  ii. The student going for in internships are required to get themselves registered in respective department at CDLU, Sirsa (for Semester registration), before leaving for training. This must be done latest by date specified for the normal VIII semester registration's

(C) **Monitoring:**
  i. Students are to ensure that their Joining reports are received by the T&P Cell within 15 days of joiner re[ort should also contain name of Industry Mentor during Internship. (**As per Annexure-I).**

  ii. The T&P Cell shall maintain a database of Industry and Faculty mentors.

  iii. Faculty Mentor of CDLU, Sirsa (or affiliated Colleges will be allowed toad workload of 1 hr. per week per student (subject to maximum to 2 hr. per week) for this mentoring purpose.

  iv. Consolidated summary sheet of joining report will be submitted to each department by the T&P Cell within 21 days of joining (**As per Annexure-II).**

  v. Faculty Mentors will regularly monitor activities /performance of student undergoing internship. The visits of faculty mentor to industries shall not be necessary. Email/ Skype/ facet mess/ Video Conferencing interactions shall be the faculty with the student and mentors in company. In cash the faculty is interested in visiting the companies /institutes, they can visit. They shall be required to Interact with the management / senior officials of the companies/ institutes visited in addition to interacting with management /senior officials of the companies /institutes visited in addition to interacting with the student mentors.

  vi. Faculty- Industry Interaction: In addition to making evaluation based on email/Skype/face time/Video Conferencing interactions with be student or based on visits

to the industry, the faculty mentor will contact the industry mentor fort nightly via e–mail / phone, to keep a close watch on the students' progress.

  vii. All visit/ monitoring reports are to be submitted to the respective department by the faculty mentor and industry mentor. A Minimum of 2 monitoring reports shall be submitted (**As per Annexure-III & IV).**

viii. Consolidated Summary Sheet of each visit/ monitoring shall be maintained by each faculty mentor. (**As per Annexure-V)**

(D)   **Preparation of Report:**

Every student shall prepare a Training/ Internship semester report as per the specified guideline (**Annexure –vi).**A standard cover page has to be used (**As per Annexure VII).** The report shall contain a declaration (**As per Annexure VIII).**

(E)   **Guidelines for Evaluation:**

  i. Total marks of training/ Internship will be equal to total full semester marks in VIII Semester of respective B. Tech. Program.

  ii. The distribution of Marks for finalizing the evaluation for Training/ Internship semester is as follows:

S. No.	Subject	Marks	Remarks
1	Evaluation by Industry mentor	30%	Two evaluations. Marks for each evaluation will be 15% of total semester marks.
2.	Evaluation by Faculty mentor	30%	Two evaluations. Marks for each evaluation will be 15% of total semester marks.
3.	Evaluation on the Deptt. including - Report - Presentation - Viva Voce	40%	The final Presentations/ evaluations will be made before a Committee of 3 members which shall include following: - Chairperson of Department - One external expert to be appointed by Examination branch. - One Faculty Member of Deptt. (other than Faculty Mentor) - Committee will evacuate maximum of 20 Reports in a Day
4.	Total Marks	100%	To be displayed on notice board.

- Controller of Examination in consultation with Dean FET will prepare the format of DMC for the above.

(F)   Calendar for Training/ Internship Semester (VIII Semester) is as given below:

S. No.	Activity	Schedule
1.	Apply to T&P Cell along with Confirmed offer letter form Company / Organization for Training/ Internship.	Minimum 15 day before the semester registration date of VIIISemester
2.	Approval by Dean FET and issuance of approval letter by T&P issuance of approval letterer by T&P cell	Before the semester registration date of VIII Semester
3	Registration for Training/ Internship Semester at respective department.	By the normal semester registration ofVIIIsemester.
4	Joining report along with name of Industry Mentor.	Within 15 days of start of Training/ Internship semester
5	Consolidated Summary Sheet of Joining Report form T&P Cell to department.	Within 21 days of start of Training/ Internship semester
6	First Monitoring	Within six weeks of Joining
7	Consolidated Summary Sheet of firstMonitoringreport including marks.	Within one week of first monitoring
8	Second Monitoring	Within three months of Joining
9	Consolidated Summary Sheet of second Monitoring report including marks.	Within one week of second monitoring
10	Submission of Final Training / Internship report to Department	By First Week of June
11	Final Evaluation at University Department, CDLU, Sirsa (for affiliated college student also)	Within June every year

UTILIZATION OF ELECTRICAL ENERGY

(Students from Department of Electrical Engineering cannot opt this subject as Open Elective)

General Course Information:

Course Code: **OE/EE/51-T** Course Credits: 3 Mode: Lecture (L) Type: Open Elective Teaching Schedule L T P: 3 0 0 Examination Duration: 03 hours.	**Course Assessment Methods; Max. Marks: 100 (Internal: 30; External: 70)** Three minor tests, each of 20 marks, will be conducted. The third minor will be conducted in open book mode by the Course Coordinator. No date sheet will be issued for the third minor at the level of the Departments. For the purpose of internal assessment, the average of the highest marks obtained by a student in any two minor examinations will be considered. All the minor examination question papers will be prepared and evaluated by following the Outcome Based Education framework. Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks). The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT[*] Level
CO1.	List and describe the various conventional and renewable energy resources and technologies	**L1 (Remembering)**
CO2.	Recognize the impact of renewable energy utilization on society and environment	**L2 (Understanding)**
CO3.	Interpret and apply the concepts of renewable energy sources for electricity generation and grid integration	**L3 (Applying)**
CO4.	Make comparisons among renewable energy resources and technologies	**L4 (Analyzing)**
CO5.	Assess and select the options among renewable energy resources and technologies	**L5 (Evaluating)**
CO6.	Do the basic design of various renewable energy systems for different requirements	**L6 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT–I

Illumination and Refrigeration: Illumination – Terminology; laws of illumination, Photometry, lighting, calculations. Electric lamps — Different types of lamps, LED lighting and Energy efficient lamps, Design of lighting schemes –factory lighting; flood lighting, street lighting.

Refrigeration: Domestic refrigerator and water coolers, Air-Conditioning, Various types of air conditioning system and their applications, smart air conditioning units.

UNIT-II

Domestic utilization of electrical energy: House wiring, Induction based appliances, Online and Offline UPS, Batteries, Power quality aspects, nonlinear and domestic loads, Earthing; domestic, industrial and sub-station. Energy Efficient motors: Standard motor' efficiency, need for more efficient motors, Motor life cycle, direct savings and payback analysis, efficiency evaluation factor.

UNIT-III

Electric Heating and Electrolytic Processes: Types of heating and applications, Electric Furnaces-Resistance, Inductance and Arc Furnace. Electric welding and sources of welding, Electrolytic Processes: Definition of various terms used in Electrolysis, Faradays[1] laws of Electrolysis, Extraction of Metals, Refining of metals, Electro-Deposition

UNIT–IV

Traction system- Requirement of an ideal traction system, power supply, traction drives, electric braking, Train movement (speed time curve, simplified speed time curve, average speed and schedule speed), Electric traction motors & their control, Speed control and braking

WIND AND SOLAR ENERGY SYSTEMS

(Students from Department of Electrical Engineering cannot opt this subject as Open Elective)

General Course Information:

Course Code: **OE/EE/52-T** Course Credits: 3 Mode: Lecture (L) Type: Open Elective Teaching Schedule L T P: 3 0 0 Examination Duration: 03 hours.	**Course Assessment Methods; Max. Marks: 100 (Internal: 30; External: 70)** Three minor tests, each of 20 marks, will be conducted. The third minor will be conducted in open book mode by the Course Coordinator. No date sheet will be issued for the third minor at the level of the Departments. For the purpose of internal assessment, the average of the highest marks obtained by a student in any two minor examinations will be considered. All the minor examination question papers will be prepared and evaluated by following the Outcome Based Education framework. Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks). The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT[*] Level
CO1.	Understanding the energy scenario and the consequent growth of the power generation from renewable energy sources	**L1 (Remembering)**
CO2.	Understanding the basic physics of wind and solar power generation.	**L2 (Understanding)**
CO3.	Applications of power electronic interfaces for wind and solar generation.	**L3 (Applying)**
CO4.	Evaluating the issues related to the grid-integration of solar and wind energy systems.	**L4(Analyzing)**
CO5.	To create and design the Network Integrating Systems of Wind and Solar Systems	**L6 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT-I

Physics of Wind Power: History of wind power, Indian and Global statistics, Wind physics, Betz limit, Tip speed ratio, stall and pitch control, Wind speed statistics-probability distributions, Wind speed and power-cumulative distribution functions.

Solar thermal power generation: Technologies, Parabolic trough, central receivers, parabolic dish, Fresnel, solar pond, elementary analysis.

UNIT-II

Wind generator topologies: Review of modern wind turbine technologies, Fixed and Variable speed wind turbines, Induction Generators, Doubly-Fed Induction Generators and their characteristics, Permanent Magnet Synchronous Generators, Power electronics converters. Generator-Converter configurations, Converter Control.

Unit-III

The Solar Resource: Introduction, solar radiation spectra, solar geometry, Earth Sun angles, observer Sun angles, solar day length, Estimation of solar energy availability.

Solar photovoltaic: Technologies-Amorphous, monocrystalline, polycrystalline; V-I characteristics of a PV cell, PV module, array, Power Electronic Converters for Solar Systems, Maximum Power Point Tracking (MPPT) algorithms. Converter Control.

UNIT-IV

Network Integration Issues: Overview of grid code technical requirements. Fault ride-through for wind farms - real and reactive power regulation, voltage and frequency operating limits, solar PV and wind farm behavior during grid disturbances. Power quality issues. Power system interconnection experiences in the world. Hybrid and isolated operations of solar PV and wind systems.

Course Content

UNIT-I

Introduction: History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern electric vehicles on energy supplies. Electric Vehicle Composition and Configurations, Basic concept of hybrid Electric vehicle, HEV configuration types – series, parallel, series-parallel and complex hybrid, Power flow control.

UNIT-II

Electric Propulsion: major requirements of EV motor drive, characteristics and control of DC motor, Induction motor, Switched Reluctance motor and Permanent Magnet motor, power converters devices/topology, control hardware, software and strategy vehicle, power source characterization, transmission characteristics.

UNIT-III

Energy Storage: Introduction to energy storage requirements in Hybrid and Electric Vehicles, Energy sources, Battery based energy storage and its analysis, Fuel fell based energy storage and its analysis, super capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis.

UNIT-IV

Energy Management Strategies: Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies. Plug-in electric vehicles, Vehicle to grid (V2G) and Grid to vehicle (G2V) fundamentals

CO2.	Understanding of the construction and principle operation of Single phase and three phase transformers.	**L2 (Understanding)**
CO3.	Analysis of different types of 3-phase transformers, phase conversion and other phenomenon	**L3 (Applying)**
CO4.	Study of DC machines with their suitability for specific industrial applications.	**L4(Analyzing)**
CO5.	Study of design of Vehicle to grid technology.	**L5(Evaluating)**
CO6.	Study that includes construction, principle of operation of electrical AC generators and motors, methods of starting, speed control.	**L6(Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT-I

Transformers: Principle, construction of core, winding and tank, operation, equivalent circuit, phasor diagram, parameters determination, , losses: core loss and copper loss, testing of transformers: open circuit and short circuit test, efficiency, Principle of Auto-Transformers, construction, comparison with 2-winding Transformer, application. Basics of three phase transformer

UNIT-II

DC. Machines: Elementary DC machine, construction,
DC Generator: working principle, EMF equation, ,types of D.C. generator: Separately and self-excited, Applications, **DC Motor: working p**rinciple, Significance of back emf, Torque Equation, Types and Characteristics of DC Motors, Need of Starter, three

point starter, four point starter, Speed Control (armature resistance, flux control, armature voltage), Ward-Leonard system, Losses and efficiency, Applications.

UNIT-III

Poly Phase Induction Motors: Construction details of three-phase induction motor, Rotating magnetic field, principle of operation, slip, Equivalent circuit, expression for torque, full load torque, maximum torque, starting torque and output power, torque-slip and torque-speed characteristics, no load and blocked rotor test, Applications.

Single Phase Induction & Special Motors: Single Phase Induction Motor: Construction & types, Shaded Pole Motor, Double revolving field theory, Stepper Motor, Brushless DC motor, Servomotors, , Reluctance Motor, Hysteresis Motor, Repulsion Motor, Schrage Motor, Linear Induction Motor.

UNIT-IV

Synchronous Machines: Alternators: Construction features and types, EMF equation of alternators, armature reaction in alternators, circuit model and phasor diagram, Voltage regulation, Salient pole synchronous machine, two-reaction theory, Applications. **Motors:** Principle of operation, Methods of starting, Torque and power equations, 'V' and inverted 'V' curves, Hunting and its suppression, Applications.

Course Content

UNIT-I

Introduction: Over view of conventional & renewable energy sources, Limitations of conventional energy sources, need & development of alternate energy sources, basic schemes and applications of direct energy conversion types of renewable energy systems, Future of Energy Use, Global and Indian Energy scenario, Potential of renewable energy sources, renewable electricity and key elements, Global climate change, CO_2 reduction potential of renewable energy, concept of Hybrid systems.

UNIT-II

Solar and Wind Energy:
Solar radiation spectra, solar geometry, Earth Sun angles, observer Sun angles, solar day length, Estimation of solar energy availability, Photovoltaic effect, characteristics of photovoltaic cells, conversion efficiency, solar batteries and applications, Design of standalone PV system, Solar energy in India, solar collectors, solar furnaces & applications, Design of solar water heater,
History of wind power, wind generators, theory of wind power, wind energy conversion system, wind speed and power, scope in India, advantages and limitations.

UNIT-III

Thermo-electric and MHD Generators: Seeback effect, Peltier effect, Thomson effect, Thermo-electric convertors, Brief description of the construction of thermoelectric generators, Applications and economic aspects.
Hall Effect, Basic principles of MHD generator, Different types of MHD generators, Conversion effectiveness, Practical MHD generators, Applications and economic aspects.

UNIT-IV

Fuel Cells and Miscellaneous Sources: Principle of action, Gibbs free energy, general description of fuel cells, types, construction, operational characteristics and applications, Geo-thermal system, characteristics of geothermal resources, Low head hydro-plants, Network Integration Issues: Overview of grid code technical requirements, Power system interconnection experiences in the world

Course Content

UNIT- I

Different types of Fractional Horse power (FHP) motors and uses in domestic & industrial application, Single phase induction motors, its constructions, operating principle, double field revolving theory and other related concepts, qualitative examination, starting methods and running performance of single-phase induction motors.

UNIT- II

Linear Induction motor, its principle of operation, Linear Levitated Motors & its application, Maglev Motors, Hyperloop motors and its operation, Permanent magnet motors, High performance Energy Efficient motors and its need, Motor Life Cycle, Effect of E.M.F. injected into secondary circuits, qualitative study, Schrage motor,

UNIT- III

Special Induction generators and its principle of operation, construction, brushless excitation systems for induction generators, Special motors and generators associated with Wind, Solar, Tidal, Biogas and other non-conventional Energy Resources & their applications.

UNIT- IV

Synchronous motors (3-phase and 1-phase) and its operation, Series Universal motors, Stepper motors and its operation, its types, applications, features and advantages, Permanent Magnet AC motors, Switched Reluctance motors, Servomotors, principles, types and operation, Shaded-pole motors, Brush-less DC motors with salient features, construction, principle of operation & its applications

Course Outcomes

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT[*] Level
CO1.	Recall the basics of Power system and its design aspects.	**L1(Remembering)**
CO2.	Describe the structure of smart grid on the basis of traditional grid with the role of automation in transmission and distribution.	**L2(Understanding)**
CO3.	Demonstrate the operation, scheduling and economics using evolutionary algorithms for smart grid and maximum utilization of renewable energy resources.	**L3(Apply)**
CO4.	Compare its performance with conventional grid and analyze the role of frequency for the control of grid.	**H1(Analysis)**
CO5.	Judge and evaluate the efficiency of system on the basis of supply of electricity with its economic indices.	**H2 (Evaluating)**
CO6.	Formulate algorithm or automation so that maximum consumer can be benefitted and losses of the system can be minimized.	**H3 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Level

Course Content

UNIT-I

Introduction to Smart Grid: Smart Grid, Need of Smart Grid, Working definitions of Smart Grid and associated concepts, Smart Grid Functions, Traditional Power Grid and Smart Grid, New Technologies for Smart Grid, Advantages, Whole sale energy market in smart grid, Indian Smart Grid, Key Challenges for Smart Grid.

UNIT-II

Smart Grid Architecture: Components and Architecture of Smart Grid Design, Review of the proposed architectures for Smart Grid, Fundamental components of Smart Grid designs, Transmission Automation, Distribution Automation, Renewable Integration, Energy

Management in smart grid.

UNIT-III

Tools and Distribution Generation Technologies: Introduction to Renewable Energy Technologies, Micro grids, Storage Technologies, Electric Vehicles and plug-in hybrids, Environmental impact and Climate Change, Economic Issues, Advanced metering infrastructure.

UNIT-IV

Communication Technologies and Smart Grid: Introduction to Communication Technology, Synchro Phasor Measurement Units (PMUs), Wide Area Measurement Systems (WAMS).

Control of Smart Power Grid System: Load Frequency Control (LFC) in Micro Grid System – Voltage Control in Micro Grid System, Reactive Power Control in Smart Grid, Case Studies for the Smart Grids.

ELECTRICAL MEASUREMENTS & INSTRUMENTS

(Students from Department of Electrical Engineering cannot opt this subject as Open Elective)

General Course Information:

Course Code: **OE/EE/64-T** Course Credits: 3 Mode: Lecture (L) Type: Open Elective Teaching Schedule L T P: 3 0 0 Examination Duration: 03 hours.	**Course Assessment Methods; Max. Marks: 100 (Internal: 30; External: 70)** Three minor tests, each of 20 marks, will be conducted. The third minor will be conducted in open book mode by the Course Coordinator. No date sheet will be issued for the third minor at the level of the Departments. For the purpose of internal assessment, the average of the highest marks obtained by a student in any two minor examinations will be considered. All the minor examination question papers will be prepared and evaluated by following the Outcome Based Education framework. Class Performance will be measured through percentage of lectures attended (4 marks) Assignments (4 marks) and class performance (2 marks). The end semester examination will be of 70 marks. For the end semester examination, nine questions are to be set by the examiner. Question number one will be compulsory and based on the entire syllabus. It will contain seven short answers type questions. Rest of the eight questions is to be given by setting two questions from each of the four units of the syllabus. A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	To impart the knowledge of fundamentals of measuring instruments and their characteristics.	**L1 (Remembering)**
CO2.	Study of various types of instrumentation based on the principle, operation and measurements of various electrical quantities.	**L2 (Understanding)**
CO3.	Understand the working principle and construction of the measuring instruments like wattmeter, energy meter & frequency meter	**L3 (Applying)**
CO4.	Measurement of resistance and instruments required	**L4(Analyzing)**
CO5.	Study of measurement of inductance, capacitance with bridges & instruments.	**L6 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT-I

Units standards and errors: S.I. units, Absolute, standards (International, Primary, Secondary & Working standards), True Value, Errors (Gross, Systematic & Random), State Characteristics of Instruments (Accuracy, Precision, Sensitivity, Resolution & threshold etc.).

Measuring System fundamentals: Classifications of measuring instruments (Absolute and Secondary) Instruments; Indicating, Recording & Integrating Instruments; Based on: Principle of operation, Generalized Instruments (Block diagram, description of blocks), three forces of Electromechanical Indicating Instruments (Deflecting, Controlling & Damping forces), Comparison between controlling methods

UNIT-II

Measuring Instruments: Construction and working principle of Electromechanical instruments, Torque equation, Shape of Scale, Use as Ammeter or as Voltmeter, Extension of range, Use as AC/DC or both, Advantages and Disadvantages of each type of measuring instruments, Errors in each instrument, PMMC type, Electro-dynamic type, Moving Iron Type (attraction, repulsion & combined types), Induction type, Hot wire type.

UNIT-III

Wattmeters and Energy Meters: Construction, operating principle, Torque equation, Shape of Scale, Errors, Advantages and Disadvantages of Electrodynamic & Induction type Wattmeters; & single phase induction type energy meters, Compensation and creep in energy meters, Electronic Energy meters.

UNIT-IV

Low and High resistance measurements: Wheat Stone bridge, its operating principle, Advantages & Limitations, Kelvin's Double bridge method, Measurement of high resistance and difficulties of its measurement, Direct method, loss of charge method, Magaohm bridge & Meggar.

A.C. Bridges: General balance equation of A.C. bridges, Circuit diagram, Phasor diagram, advantages and disadvantages, Applications of Maxwell's inductance , inductance-capacitance, Hay's bridge, Anderson's bridge, Owen's bridge, De-Sauty's bridge, Schering bridge & Wein's bridge etc.

A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course Outcomes

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Describe the present state of energy scenario	**L1(Remembering)**
CO2.	Describe the energy management and savings through the different levels during utilization	**L2(Understanding)**
CO3.	Solve the problems related with energy management and audit.	**L3(Apply)**
CO4.	Perform economic and energy efficiency analysis of various electrical devices on the behalf of their energy audit repot.	**H1(Analysis)**
CO5.	Create energy audit report for industrial, residential and commerci consumers	**H3 (Creating)**

*Revised Bloom's Taxonomy Action verbs/Level

Course Content

UNIT-I
Energy Scenario: Commercial and Non-Commercial Energy, Primary and Secondary Energy Resources, Conventional and non-conventional energy, Commercial Energy Production, Final Energy Consumption, Energy Needs of Growing Economy, Long Term Energy Scenario, Energy Pricing, Energy Sector Reforms, Energy and Environment: Air Pollution, Climate Change, Energy Security, Energy Conservation and its Importance, Energy Strategy for the Future

UNIT-II
Energy Management Functions: Need for energy management, Energy management program, Organizational Structure, Energy Policy, Planning, Audit Planning, Educational Planning, Strategic Planning, Reporting

UNIT-III
Electrical Energy Management: Electricity tariff, Electrical Load Management and Maximum Demand Control, Maximum demand controllers, Power Factor & Its importance, Automatic power factor

controllers, Energy efficient motors, Soft starters with energy saver, Energy efficient transformers, Electronic ballast, Energy efficient lighting controls

UNIT-IV

Energy Audit: Definition, Energy audit- need, Types of energy audit, Energy Auditing Services, Basic Components of an Energy Audit, Specialized Audit Tools, Industrial Audits, Commercial Audits, Residential Audits, Indoor Air Quality and basics of economic analysis.

A candidate is required to attempt any other four questions selecting one from each of the four units. All questions carry equal marks.

Course outcomes:

Sr. No.	Course outcomes At the end of the course students will be able to:	RBT* Level
CO1.	Describe and analyze different types of sources and mathematical expressions related to thermodynamics and various terms and factors involved with power plant operation.	**L1(Remembering)**
CO2.	Summarize the working and layout of steam power plants and discuss about its economic and safety impacts.	**L2(Understanding)**
CO3.	Illustrate the working principle and basic components of the nuclear power plant, diesel engine and the economic and safety principles involved with it.	**L3(Apply)**
CO4.	Examine the mathematical and working principles of different electrical equipment's involved in the generation of power.	**L4(Analysis)**
CO5.	Evaluate the different power generating systems	**L5(Evaluating)**
CO6.	Construct the model on the applications basis of power plant	**L6(Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Load and loading forecasting: Load curves, maximum demand, load factor, diversity factor, capacity factor, utilization factor, types of loads, load forecasting.

Power plant economics: Choice of type of generation, size of generator and number of units, cost of electrical energy, depreciation of plant, effect of load factor on cost of electrical energy.

UNIT- II

Thermal power plants: Choice of site, main and auxiliary equipment fuel gas flow diagram, water stream flow diagram, working of power plants and their layout, characteristics of turbo generators.

Hydroelectric plants: Choice of site, classification of hydroelectric plants, main parts and working of plants and their layouts, characteristics of hydro electric generators.

UNIT- III

Nuclear power plants: Choice of site, classification of plants, main parts, layout and their working, associated problems.

Diesel power plants: Diesel plant equipment, diesel plant layout and its working, application of diesel plants.

UNIT- IV

Combined working of plants: Advantages of combined operation plant requirements for base load and peak load operation. Combined working of run off river plant and steam plant.

Tariffs and power factor improvement: Different types of tariffs and methods of power factor improvement.

	At the end of the course students will be able to:	
CO1.	Understand about conventional transducers and select the suitable one for the given application.	**L1(Remembering)**
CO2.	Analyze and quantify the uncertainties in measurement data.	**L2(Understanding)**
CO3.	Design and develop customized smart sensors for different applications.	**L3(Apply)**
CO4.	Acquire a comprehensive knowledge of manufacturing techniques and design aspects of micro sensors and actuators.	**L4(Analysis)**
CO5.	Stability Analysis of a systems and design the controllers accordingly	**L5(Evaluating)**
CO6.	Applications of sensors for particular process control applications.	**L6(Creating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Definition of transducer, Advantages of an electrical signal as output, Basic requirements of transducers, Primary and Secondary Transducer, Analog or digital types of transducers. Resistive, Inductive, capacitive, piezoelectric and Hall effect transducers, photovoltaic cells, semiconductor photodiode
Measurement of Displacement: Potentiometer resistance type transducers, inductive types transducers, differential transformer (L.V.D.T.), capacitive transducer, Hall Effect transducer

UNIT- II

Measurement of Pressure: Manometer, Force Summing devices and electrical transducers
Measurement of Flow: Venturimeter, orifice meter, Pitot- static tube, rotameter, turbine flow meter, ultrasonic flow meter, electromagnetic flow meter, hot wire anemometer.
Measurement of Liquid Level: Resistive method, Inductive methods, Capacitive methods

UNIT- III

Measurement of Temperature: Metallic Resistance thermometers, semiconductor resistance sensors (Thermistors), thermo-electric sensors, Thermocouple.
Measurement of Humidity: Resistive, capacitive, aluminum oxide and crystal hygrometers.
Measurement of Velocity: variable reluctance pick up, electromagnetic tachometers, photoelectric transducer, toothed rotor tachometer generator.

UNIT- IV

Data Acquisition Systems and Conversion: Introduction, Objectives and Configuration of Data Acquisition System, various types of Data Acquisition Systems, Data Conversion. Data acquisition in instrumentation systems.
Smart Sensors: Introduction to smart sensors, components of smart sensors, General architecture of smart sensors, Evolution of Smart Sensors, Advantages, standards for smart sensor interface, Industrial applications of smart sensors.

CO1.	Elicit the major components, advantages, limitations and applications of EHV AC and DC transmission Systems	**L1(Remembering)**
CO2.	Recapitulate the fundamental aspects of Extra High Voltage A.C and DC transmission design and analysis	**L2(Understanding)**
CO3.	Apply the remedial measures against the problems associated with EHVAC and DC transmission such as Corona, AN, RI, Over-voltages, Ferro-resonance, Harmonics in converters	**L3(Apply)**
CO4.	Perform in-depth analysis of various control techniques for controlling the power flow through a dc link and multi-terminal operation of HVDC	**L4(Analysis)**
CO5.	Critically evaluate AC and DC transmission system with respect to all aspects	**L5(Evaluating)**

*Revised Bloom's Taxonomy Action verbs/Levels

Course Content

UNIT- I

Introduction: Need of EHV transmission, standard transmission voltage, Power handling capacity, Comparison of EHV AC & DC transmission systems and their applications & limitations, Bundled conductors, Surface voltage gradients in conductor, Distribution of voltage gradients on sub-conductors, mechanical considerations of transmission lines, modern trends in EHV AC & DC transmission.

UNIT- II

EHV AC Transmission: Corona, Corona loss formulae, corona current, Audible noise- generation and characteristics corona pulses their generation and properties, Radio interference (RI) effects, Over voltage

due to switching, Ferro-resonance, reduction of switching surges on EHV system, principle of half wave transmission**.**

UNIT- III

Components of EHV D.C.: Converter circuits, Rectifier and inverter valves, Reactive power requirements, Harmonics generation, Adverse effects, Classification, Remedial measures to suppress, Filters, Ground return, Converter faults & protection harmonics, misoperation, Commutation failure, Multi-terminal D.C. lines.

UNIT- IV

Control of EHV D.C.: Desired features of control, control characteristics, Constant current control, Constant extinction angle control. Ignition Angle control, Parallel operation of HVAC & DC system, Problems & advantages.
